 - " III. Bhil languages, Khāndēšī, etc.
 - " IV. Pahārī languages.
- " X. Eranian family.
- ., XI. "Gipsy" languages.

		The state of the s

PREFACE.

In this Volume it has been my object to present a summary of the results of the Linguistic Survey of India, so far as it has been under my charge, in a form convenient for reference alike to professed students of language and to the lay reader.

The descriptive portion falls into two sections. In the first, which I have named the Introduction, I have given an account of previous attempts to set forth the languages of India, and of the procedure followed in the present Survey. Some of what is stated in this section will also be found scattered through other volumes, but here it is all brought together in one collected account.

The second section is an attempt to bring under one view the results of the Survey and the lessons to be derived from them. Much of it has been based on the Chapter on the Languages of India contributed by me to the Indian Census Report for the year 1901, but this has been brought up to date, and a good deal has been added to it. That chapter may, in fact, be looked upon as a first draft of this section of the volume. Written as it was nearly a quarter of a century ago, there have been found many opportunities for additions and improvements.

These two sections are followed by two collections (Majora and Minora) of Addenda and Corrigenda for the whole Survey. The first (Addenda Majora) consists of the more important additions, and, especially, of accounts of languages for which materials became available after the volume referred to had gone to press. Only in this way have I been able to bring the earlier volumes up to date. The Addenda et Corrigenda Minora mainly include additions of detail, corrections of misprints and of mistakes of my own, and the like. These latter are issued loose and are printed in such a way that they can be readily cut up and inserted in their proper places in the several volumes of the Survey.

To the whole, three Appendixes have been added. The first is a classified list of all the languages of India, in which the statistics of the Survey have been compared with those of the Census of 1921. The second Appendix is a list of those Indian languages of which gramophone records are available in this country and in Paris, and the third is an Index of all the names referring to languages of India that I have been able to collect. I hope that the last will be found a useful work of reference for anyone who may desire to identify a name with which he is not familiar. It also forms an Index to the contents of Volumes II to XI of the Survey itself.

A second part of this volume is now in the press. It is a comparative vocabulary of 168 selected words in about 368 different languages and dialects, and will, I hope, be found useful by students of languages.

A third part is being prepared by the competent pen of Professor Turner of the School of Oriental Studies. It will be a Comparative Dictionary of the Indo-Aryan Languages, for the special use of philologists. It will appear in due course, and will complete the Survey.

It is with a feeling of gratitude for having been permitted to finish a work extending over thirty years that, after writing this Preface, the pen will be laid down. Without any pretended modesty I confess that no one is more than myself aware of the deficiencies of

the Survey, nor, on the other hand, need I plead guilty to a vain boast when I claim that what has been done in it for India has been done for no other country in the world. Such as it is, I bid it adieu, sure of sympathy with my mistakes, and of appreciation of what in it is worthy, on the part of those lovers of India who are competent to put its merits and its defects to test.

GEORGE A. GRIERSON.

LINGUISTIC SURVEY OF INDIA.

SYSTEM OF TRANSLITERATION ADOPTED.

A.—For the Deva-nagari alphabet, and others related to it—

```
\exists i, \quad \dot{\xi} \, \bar{\imath}, \quad \exists \, u, \quad \exists \, \bar{u}, \quad \overline{\imath} \, \bar{\imath},
                                                     y e,
                                                                        ऐ ai, चो o, चो ö, चो u.
क ka ख kha ग ga च gha
                                      ङ na
                                                      च cha
                                                                क chha
                                                                             ਓ ju
                                                                                       भा jha
        ठ tha
                   ਵ da ਫ dha
                                                      त ta
                                                                 य tha
                                                                             द da
                                                                                       ध dha
                                                                                                  न na
        फ pha
                   ब ba भ bha
                                       H ma
                                                      य ५०
                                                                ₹ ra
                                                                             ल la
                                                                                       व va or wa
श्र ईव
            ष sha
                          सsa
                                       ₹ ha
                                                      ड ṛa
                                                                द rha
                                                                             क la ऋह lha
```

Visarga (:) is represented by h, thus ক্ষম: kramaśah. Anuswāra (') is represented by m, thus মিল simh, বাম vams. In Bengali and some other languages it is pronounced ng, and is then written ng; thus বংশ bangśa. Anunāsika or Chandra-bindu is represented by the sign ~ over the letter nasalized, thus ম mē.

B.—For the Arabic alphabet, as adapted to Hindostani—

```
od
                 j
    b
                 ch
                                      j ?
                                                                       gh
              હ
                          j z
                 ķ
                                      j z
                                                                       f
                                      ; <u>zh</u>
                  \underline{kh}
ٿ
ث
                                                                   J
                                                                        l
                                                                   J
                                                                        when representing anunāsika
                                                                         in Dēva-nāgarī, by ~ over
                                                                          nasalized vowel.
                                                                       w or v
                                                                        h
                                                                       y, etc.
```

Tanwin is represented by n, thus $i_{j,j}$ fauran. Alif-i-maqṣūra is represented by $\bar{a}_{j,j}$ —thus $\hat{a}_{j,j}$ —th

In the Arabic character, a final silent h is not transliterated,—thus banda. When pronounced, it is written,—thus banda.

Vowels when not pronounced at the end of a word, are not written in transliteration. Thus बन ban, not bana. When not pronounced in the middle of a word or only slightly pronounced in the middle or at the end of a word, they are written in small characters above the line. Thus (Hindī) देखता dēkhatā, pronounced dēkhatā; (Kāshmīrī) सुर् के किंक के किंकिंग, pronounced kor; (Bihārī) देखिय dēkhath.

- C.—Special letters peculiar to special languages will be dealt with under the head of the languages concerned. In the meantime the following more important instances may be noted:—
 - (a) The ts sound found in Marāṭhī (ব), Paṣḥṭō (২), Kāshmīrī (্র, ব), Tibetan (১), and elsewhere, is represented by ts. So, the aspirate of that sound is represented by tsh.
 - (b) The dz sound found in Marāṭhī (ज), Paṣḥtō (), and Tibetan (氏), is represented by dz, and its aspirate by dzh.
 - (c) Kāshmīrī (3) (3) is represented by \tilde{n} .
 - (d) Sindhī &, Western Panjābī (and elsewhere on the N.-W. Frontier) نڙ, and Paṣḥtō , or ware represented by n.
 - (e) The following are letters peculiar to Paṣḥtō:—

 \$\tip t_{\overline{\psi}} \text{ ts} \text{ or } \frac{dz}{2}, \text{ according to pronunciation}; \(\varphi, \delta'; \) \(\varphi, \text{ ing to pronunciation}; \\ \varphi, \text{ or } \frac{kh}{k}, \text{ according to pronunciation}; \\ \varphi \text{ or } \varphi, \\ \varphi \text{ or } \varphi, \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text{ or } \varphi \text{ ing to pronunciation}; \\ \varphi \text

D.—Certain sounds, which are not provided for above, occur in transcribing languages which have no alphabet, or in writing phonetically (as distinct from transliterating) languages (such as Bengali) whose spelling does not represent the spoken sounds. The principal of these are the following:—

```
\hat{a}, represents the sound of the a in all.
```

```
a \text{ in } hat.
                                  e in met.
ĕ,
                                  o in hot.
ŏ,
                                  é in the French était.
e,
                                  o in the first o in promote.
0,
                                  ö in the German schön.
ö,
ü,
                                   ü in the
                                                      mühe.
                                   th in think.
th,
dh,
                                   th in this.
```

The semi-consonants peculiar to the Muṇḍā languages are indicated by an apostrophe. Thus k', t', p', and so on.

E.—When it is necessary to mark an accented syllable, the acute accent is used. Thus in (Khōwār) ássistai, he was, the acute accent shows that the accent falls on the first, and not, as might be expected, on the second syllable.

INTRODUCTION

The languages of India have from the earliest times been an object of interest to

Previous enquiries into those that spoke them, but their serious study by foreigners is not more than three hundred years old. Even the great

Albirūnī. Albirūnī in the account of the India of his day (about 1030

A.D.) spoke only of Sanskrit, then a dead language, and its difficulties. Regarding the living forms of speech, he merely said, "Further, the language is divided into a

neglected vernacular one, only in use among the common people, and a classical one, only in use among the upper and educated classes, which is much cultivated."

Amīr Khusrau, a Turk by origin, but born in India, gives us (1317 A.D.) more

Amir Khusrau, a Turk by origin, but born in India, gives us (1317 A.D.) more Amir Khusrau. detailed information.² He says:—

As I was born in Hind, I may be allowed to say a word respecting its language. There is at this time in every province a language peculiar to itself, and not borrowed from any other—Sindī [i.e., Sindhī], Lahōrī [Panjābī], Kashmīrī, the language of Dugar [Dōgrā of Jammu], Dhūr Samundar [Kanarese of Mysore], Tilang [Telugu], Gujarāt, Ma'bar [Tamil of the Coromandel Coast], Gaur [Northern Bengali], Benga I Audh [Eastern Hindī], Delhi and its environs [Western Hindī]. These are all languages of Hind, which from ancient times have been applied in every way to the common purposes of life.

Elsewhere³ he speaks of Hindi,—meaning by this term 'the language of Hind', or India (i.e., probably Sanskrit), and not what we nowadays call by that name:—

If you pender the matter well, you will not find the Hindi language inferior to the Pārsī [Persian]. It is inferior to the Arabic, which is the chief of all languages... Arabic, in speech, has a separate province, and no other language can combine with it. The Pārsī is deficient in its vocabulary, and cannot be tasted without Arabic condiments; as the latter is pure, and the former mixed, you might say that one was the soul, and the other the body. With the former nothing can enter into combination, but with the latter, every kind of thing. It is not proper to place the cornelian of Yemen on a level with the pearl of Darī.

The language of Hind is like the Arabic, inasmuch as neither admits of combination. If there is grammar and syntax in Arabic, there is not one letter less of them in the Hindī. If you ask whether there are the sciences of exposition and rhetoric, I answer that the Hindī is in no way deficient in these respects. Whoever possesses these three languages in his store, will know that I speak without error or exaggeration.

Here we learn much more than what we are told by Albiruni. The latter writes as if one and the same spoken language was current over the whole of India, though, no doubt, he knew better. The other gives a fairly complete list of seven Indo-Aryan languages with two dialects, and of three of the principal Dravidian forms of speech.

Although he was not a foreigner, I may quote in this connexion the words of Abū'l

Faẓl in the 'Āin-i-Akbarī' upon the same subject, for,

while he was an Indian born and bred, he did not look at

matters from a Hindū point of view:—

Throughout the wide extent of Hindostān, many are the dialects that are spoken, and the diversities of those that do not exclude a common inter-intelligibility are innumerable. Those forms of speech that are not understood one of another are the dialects of Delhi [Western Hindī], Bengal [Bengali], Multān [Lahndā], Mārwār [Western Rājasthānī], Gujarāt [Gujarātī], Telingāna [Telugu], Marhaṭṭa [Marāṭhī]. Karnātik [Kanarese], Sind [Sindhī], Afghān of Shāl [Paṣḥṭō], Beluchistan [Balōchī], and Kashmīr [Kāshmīrī].

¹ Sachau's translation, i, 18.

³ Elliot, op. cit., p. 556.

VOL. I, PART I.

² Elliot, "History of India," iii, 562.

⁴ Jarrett's Translation, iii, p. 119.

Here we have a somewhat fuller catalogue, though some important names,—e.g. Tamil,—are omitted; but we see that they are bare lists and nothing more, and I know of no early oriental account of the languages themselves, either as a whole, or taken individually.¹

So far as I am aware, the earliest notice of the modern Indian languages that appeared in Europe was in Edward Terry's 'Voyage to the Terry. East Indies,' published in 1655 A.D. He there informs us² that 'the Vulgar Tongue of the Countrey of Indostan hath great Affinity with the Persian and Arabian Tongues, but is pleasanter and easier to pronounce. It is a fluent language, expressing many things in a few words.3 They write and read like us, riz., from the Left to the Right Hand.' Some of the English merchants of those days could certainly speak Hindostānī with fluency,4 and Thomas Coryate, when presented to the Great Mogul by Sir Thomas Roe, is said to have addressed that potentate in a Persian speech. So, Fryer⁵ (1673) in his 'New Account of East Fryer. India and Persia' says regarding India, 'The language at Court is Persian, that commonly spoken is Indostan (for which they have no proper character, the written language being called Banyan), which is a mixture of Persian and Sclavonian, as are all the dialects of India.'

Before Terry and Fryer, there had been descriptions of Nāgarī, the principal written character of Northern India. The celebrated traveller Pietro Della Valle.

Room to the learned, and used by the Brahmans, who, to distinguish it from the other vulgar characters, call it Nagheri.' Again, Father Heinrich Roth, who was a member of the Jesuits' College at Agra from 1653 to 1668, met Athanasius Kircher at Rome in 1664, and there gave him several specimens of the same character which the latter published in 1667 in his 'China Illustrata.' One of these was the Paternoster in Latin transliterated into Nāgarī. We shall see that for many years this was taken to be a specimen of actual Sanskrit.

Before turning to European accounts of Indian languages, I may mention an amusing legend concerning another, and earlier, Linguistic Survey, current among the Afghāns, whose language, Paṣḥtō, is admitted to be inharmonious. It is said that King Solomon sent forth his Grand Vizier, Asaf, to collect specimens of all the languages spoken on the earth. The official returned with his task accomplished. In full darbār he recited passages in every tongue till he came to Paṣḥtō. Here he halted, and produced a pot in which he rattled a stone. 'That,' said he, 'is the nearest approach that I can make to the language of the Afghāns.' It is plain that even Solomon, with all his wisdom, had not, at the time, succeeded in anticipating the methods of Professor Daniel Jones and of the International Phonetic A-sociation.

² Quoted from Ogilby's "Asia." See below. Much of what follows will also be found scattered through the different volumes of the Survey, or in other writings of mine. The various statements are here combined into one general view.

³ Hindőstānī had this undeserved reputation for many generations. There is a story of one of the first English Judges of the Calcutta High Court. In sentencing a man to death, he is said to have dwelt at length, in English, on the enormity of the offence, the unhappy feelings of the criminal's parents, and his certain fate in the next world unless he repented. When he had finished, he instructed the court interpreter to translate to the prisoner what he had said. This worthy's translation consisted of the six words, 'Jāō, badzāt, phāsī kā hukm huā,' 'go, rascal, you are ordered to be hanged.' The Judge is said thereupon to have expressed his admiration at the wonderful conciseness of the Indian language.

^{4 &}quot;Hobson-Jobson," s.v. 'Hindostanee' gives the following anecdote of Tom Coryate taken from Terry. The occurrence is dated 1616. 'After this he [Coryate] got a great mastery in the Indostan, or more vulgar-language; there was a woman, a laundress, belonging to my Lord Embassador's house, who had such a freedom and liberty of speech, that she would sometimes scould, brawl, and rail, from the sun-rising to the sun-set; one day he undertook her in her own language. And by eight of the clock he so silenced her, that she had not one word more to speak.'

⁵ Also from 'Hobson-Jobson,' l. c.

⁶ Viaggi, iii, 57. Quotation taken from Dalgado's Glossário Luso-Asiático, s. v. 'Devanagárico.'

OGILBY. 3

We may now pass on to Ogilby's 'Asia.' Its full title is Asia, the First Part, Being An accurate Description of PERSIA, and the several Ogilby's 'Asia.' Provinces thereof. The Vast Empire of the Great Mogol, and other Parts of India and their Several Kingdoms and Regions with the Denominations and Descriptions of the Cities, Towns, and Places of Remark therein contain'd. The Various Customs, Habits, Religion and Languages of the Inhabitants. Their Political Governments and Way of Commerce, also The plants and animals peculiar to each Country Collected and Translated from most Authentic Authors, and Augmented with later Observations; illustrated with Notes and Adorn'd with peculiar Maps, and proper Sculptures. By John Ogilby Esq.; His Majesty's Cosmographer, Geographick Printer, and Master of His Majesty's Revels in the Kingdom of Ireland. London, printed by the Author at his house in White-Friers. M. DC. LXXIII. Although its author was the 'Uncle Ogleby' of Dryden's MacFlecnoe, and was also one of the victims of Pope's Dunciad, this manysided man,—poet, translator of Virgil and of Homer, dramatist, as well as geographer, contrived to fill his bulky work with an immense amount of various and curious information. He was acquainted (pp. 129-134) with the South Indian method of writing on palm-leaves by pressing in grooves with an iron stylus, which is the origin of the circular shape of the letters of the modern Oriva and other southern alphabets. He then goes on,-

According to Delle Valle all the Provinces in India have one and the same Language, though peculiar Letters; for notwithstanding that the Language or Speech is understood in divers Countreys, yet the characters are different.

The Learned sort, or *Brahmans*, have a Language and Letters by *Kircher*, called *Nagher*, which being accounted Sacred, is onely known to their Tribe or Family, and used amongst them as *Latine* amongst the Learned in *Europe*.

Their Characters are fair and large, taking up much room: They also differ much from the Letters us'd by the Benjan Merchants in Surat.

He then quotes Terry as above (p. 2), and goes on :—

In India, and the Countreys under the Moyol's Jurisdiction, the Persian Tongue is more common than the Indian, being generally spoken by the Nobility at Court, and used in all Publick Businesses and Writings, which cannot seem strange to any, considering the Moyollean Princes have their Extract from Tartary and Samarcand, whence the Persian Tongue was first brought.

The Vulgar Mahumetans, Peruschi tells us, speak the Turkish Tongue, but not so eloquently as the natural born Turks. Learned Persons, and Mahumetan Priests, speak the Arabick, in which the Alcoran and other books are written.

But no Language extends further, and is of greater use, than the Malayan, so called from the City Malacka, from whence it hath its Original. It is spoken in all the Isles lying in the Straights of Sunda, and through the adjacent Countrey; but especially us'd by Merchants.

Linschot tells us. That many People of divers Nations, which came to build the City, and settle in Malacka, made this peculiar Language of all the other Indian Tongues, consisting of the most pleasing Words, and neatest manner and way of speaking, of all other the Neighbouring People; which makes this Language to be the best and most eloquent of all India, and also the most useful, and casiest to learn. For there is not one Merchant which comes from the neighboring Countreys to Trade here, but learns this Tongue.

The extraordinary statement that Malay was the lingua franca of India, seems to have been widely current in Ogilby's time and long afterwards. The blunder is evidently due to confusion of the Dutch East Indies with India proper. Wilkins in his preface to Chamberlayne's 'Sylloge' (vide post) explained that he could not procure a version of the Lord's Prayer in the Bengali language, as that form of speech was becoming extinct (!) and was being superseded by Malay. He therefore, for Bengali, gave a Malay version written in a mangled form of the Bengali character. That this idea was widely spread is shown by the reproduction of the same Malay-Bengali specimen in Fritz's "Sprachmeister" written in 1748.

Passing over works such as Henricus van Rheede tot Drakenstein's 'Hortus Indicus Malabaricus' (1678) and Thomas Hyde's work on chess, the 'Historia Shahiludii' (1694), both of which contained specimens of the Nagarī alphabet, we next come to Andreas Müller's collection of versions of the Lord's Prayer, written under the pseudonym of Thomas Ludekene and published in Berlin in 1680.¹ Its full title is Oratio Orationum. S. s. Orationis Dominicae Versiones praeter authenticam fere centum, eaque longe emendatius quam antehac, et e probatissimis Autoribus potius quam prioribus Collectionibus, jamque singulā genuinis Linguā suā Characteribus, adeoque magnam Partem ex Aere ad Editionem a Barnimo Hagio traditae editaeque a Thoma Ludekenio, Solq. March. Berolini, ex Officina Rungiana, Anno 1680. The Barnimus Hagius mentioned herein as the engraver is another pseudonym of Müller himself. In this collection Roth's Paternoster was reprinted as being actually Sanskrit, and not a mere transliteration of the Latin original.

Omitting more than a mention of isolated accounts of single Indian languages, such as the 'Lexicon Linguae Indostanicae' (1704) of the Capuchin Franciscus M. Turonensis, John Joshua Ketelaer's Grammar and Vocabulary of the Lingua Hindostanica (about 1715), and Ziegenbalg's (1716) and Beschi's (1728) Tamil Grammars, we come to another important collection of versions of the Lord's Prayer (Amsterdam, 1715), the 'Sylloge' of John Chamberlayne, a Fellow of our Royal Society, with a preface by David Wilkins, the Coptic scholar, who was also actively associated in the work. For our present purposes, it is sufficient to remark that, while it supports the mistake about Malay being current in India, it again reproduces Roth's Paternoster, but without Müller's blunder about the language in which it was written being Sanskrit.

We may here anticipate chronological order by mentioning the last attempt at Fritz's 'Sprachmeister.'

comparing languages solely by collecting versions of the Lord's Prayer. This was the 'Sprachmeister' of Johann Friedrich Fritz, published at Leipzig in 1748, with a preface by the celebrated Indian missionary Schultze. The title page runs as follows:—Orientalisch- und Occidentalischer Sprachmeister, Welcher nicht allein hundert Alphabete nebst ihrer Aussprache, So bey denen meisten Europäisch-Asiatisch-Africanisch- und Americanischen Völckern und Nationen; gebräuchlich sind, Auch einigen Tabulis Polyglottis verschiedener Sprachen und Zahlen vor Augen leget, Sondern auch das Gehet des Herrn, In 200 Sprachen und Mund-Arten.

¹ In those days such collections of the Lord's Prayer were very common. Fritz, in his 'Sprachmeister,' enumerates no less than fifty-five as made before 1748. They were the first beginnings of the study of comparative philology.

mit dererselben Characteren und Lesung, nach einer Geographischen Ordnung mittheilet. Aus glaubwürdigen Auctoribus zusammen getragen, und mit darzu nöthigen Kupfern versehen. Leipzig, zu finden bey Christian Friedrich Gessnern. 1748. Fritz's book is a long way ahead of its predecessor Chamberlayne's. It contains 172 pages of various alphabets, including many coming from India, 56 pages of tables showing the first ten numerals, and 128 pages, with numerous plates, of versions of the Lord's Prayer. The Indian alphabets explained are Bengali, Tamil, Burmese, Grantha, Telugu, Singhalese, and Nāgarī. The Indian versions are Latin (in the Nāgarī character), Sanskrit, Hindōstānī, Gujarātī, Marāthī, Kōnkanī, Singhalese, Malay in the Bengali character (see above, p. 4), Tamil, Telugu, Kanarese, and Burmese. Of some of these several versions are given under variant names. As an Appendix, the author gives comparative tables of the words for 'father,' 'heaven,' 'earth,' and 'bread' in all these languages. For its time, the Sprachmeister is a very creditable piece of work, carried out in a really scientific spirit.

Maturin Veyssière LaCroze was born at Nantes in 1661, was appointed librarian to the Elector at Berlin in 1697, and died in that city in 1739. LaCroze. This remarkable scholar, amid his manifold activities, was a profound student of oriental lore, as it was then understood, and carried on a copious correspondence with most of the learned men of Europe. This correspondence was published in 1742-46 at Leipzig in three closely printed Latin volumes, and is still obtainable in the book-market. In the year 1714 Wilkins wrote to him asking for help in the preparation of Chamberlayne's 'Sylloge.' This request incited LaCroze to write a long communication to Chamberlayne dealing with the general question of the study of languages, and vindicating comparative philology from the charge of inutility. then proceeds briefly to describe the inter-relationship of the various languages known to him, and, coming to India, says, 'I have, however, little to offer concerning the alphabets of this country, except that they are derived from that called Hanscrit, the source of the oldest forms of which is the [Semitic] alphabet of Persia or Assyria, and which is used by the Brachmans. From these Brachmans the other Indian tribes have imbibed their superstitions, and it was amongst them that Xaca, who laid the bonds of false religions on the peoples of the East, was himself brought up. Thus, the order of the alphabet is the same amongst the Brachmans, the people of Malabar, the Singhalese, Siamese, Javans, and even the language of Bali,4 which is the sacred tongue of Laos, Pegu, Cambodia, and Siam.⁵ With a passing reference to the letters written to Ziegenbalg, of the Danish Mission at Tranquebar, who was LaCroze's chief source of information regarding the languages of southern India, we come to the latter's voluminous correspondence with Theophilus Siegfried Bayer, then residing in Bayer. Leipzig, and subsequently in Petrograd. The earlier letters

¹Thesaurus Epistolicus LaCrozianus, iii, 78ff.

² The use of 'Hanscrit' for 'Sanskrit' is no doubt taken from Kircher's "China Illustrata," mentioned above (p. 2) where the word is so spelt. His theory connecting the earliest forms of the Indian alphabet with Assyrian (Assyrian cuneiform was of course unknown in those days, and he was not referring to it, but to some form of Phoenician) is a remarkable anticipation of the results of modern science. Later on he argues that the Indians have done just what the Greeks have done, in changing the Phoenician right to left direction of writing to left to right. When we remember that LaCroze had no Asôka inscriptions and no Moabite Stone to consult, and that his theory was not a guess, but was founded on argument, we must acknowledge the prophetic acuteness of the scientific vision of this great Frenchman.

³ i.e. Sākya, the Buddha.

⁴ The Siamese pronunciation of Pāli.

⁵ The foregoing passage is not a quotation, but is an abstract of LaCroze's remarks.

afford few points of interest to Indian students, as they deal chiefly with Tangut, Mongolian, and Chinese, although in March 1717, there is an interesting passage at arms where Bayer attacks LaCroze's theory about the ultimate origin of the Brachmans' alphabet. In this earlier correspondence, the only Indian language that I find mentioned is Bengali, —probably the first mention of that alphabet to be published in Europe.

The foundation of the Imperial Academy of Sciences of St. Petersburg, on the lines of the French Academy, were laid down by Peter the Great, and in 1725 it was formally opened by the Empress Catherine. The most learned men of Europe,—including Bayer,—were invited to join it, and it was finally put on a permanent footing by Peter II. The first two volumes of the Transactions, relating to the year 1726, were published in 1728, and are now very rare, nearly the whole issue having been destroyed in a fire which consumed the Academy in 1741.

Messerschmidt. In 1727, Daniel Messerschmidt, who had been deputed by Peter the Great to explore Siberia, returned to Petrograd and, among other curiosities, brought with him an inscription and a Chinese printed book. These were made over to Bayer, and he describes them in the third and fourth volumes of the Transactions. The inscription consisted of two short lines, each in a different form of the Tibetan character. It is reproduced here.

त्राम्यात्वव्याः हे भार्षे स्टास्ट स्ट्राम्या स्टास्ट स्ट्राम्या स्टास्ट स्ट्राम्या स्ट

Bayer, with the aid of the book to be subsequently described and of his knowledge of Manchu, deciphered this as 'Ong ma ni pa dme ch³um chi,' but was unable to discover its meaning. Messerschmidt, he says, told him that it was one of the commenest prayers of the Tunguts (i.e. Tibetans) and meant 'God have mercy on us.' This decipherment of the well-known Buddhist formula Om, mani padmē, hum, though its translation was incorrect, marks the first step in a new stage of the study of Indian languages in Europe. For the next few years European scholars attacked the languages of northern India through Chinese and Tibetan.

The other curiosity brought back by Messerschmidt,—a book consisting of eight leaves,—had been printed in China, and may be looked upon as the Rosetta stone of these explorers. It gave in parallel lines an entire syllabary of the Tibetan Lāntsha alphabet with a transliteration into ordinary Tibetan, and into a form of Manchu which Bayer called Mongolian. A facsimile of the first page and a half⁴ is given on the plate opposite.

¹ The. Ep. LaCr. i, 16.

² The. Ep. LaCr. i, 23; iii, 28.

> Pronounced like the ch in 'loch.'

There were two lines to a page. But as three lines contain the complete alphabet of simple letters, I have followed Baver in giving a page and a half on the plate.

Bayer's first procedure was to establish so far as was possible the Tibetan characters. This was an easy task, for the language was already partly known to him, and he had other Tibetan students and books at his command. Then, with the aid of this and other specimens, he established the Manchu transliteration, and finally from these two, he was able to make a very fair attempt at transliterating the Lantsha, which is a kind of ornamental Nagari. In the plate I have given the transliteration fixed by him and used for deciphering the Om, mani padmē, hum of the inscription. It will be observed that the transcription is by no means faultless, though it is wonderful for so early an attempt.¹

Having thus made out the Lantsha alphabet, Bayer sent a copy of it to Schultze, the missionary at Tranquebar, and was gratified to learn that Schultze. the letters could be read by the Brahmans of northern India.³ Schultze, himself, to judge from the specimens he gives, cannot at that time have known Sanskrit, or, indeed, much of any Indo-Aryan language. He spells the name 'Benares' काशा or भनारेसे and talks of श्राषरा: नाघरी: He, however, describes three alphabets and gives specimens of them,—the Nagari, the 'Balabandu,' and the 'Akar Nagari.' They had evidently been sent to Bayer just as they had been written down for Schultze, who could not read them. By 'Balabandu' he meant Marāṭhī, but the three alphabets are all merely Nagari written by different hands. Schultze also gives instructions for pronunciation. Some of them may be quoted:—

- i breue, lingua ad dexteram inclinata.
- i longum, lingua ad sinistram mota.
- u breue, recto ex ore protruditur.
- ú longum, quasi duplex, sono in altum prolato.
- dha [i.e. da], d formatur lingua quasi apoplectica, vt saliua ad palatum opem ferat, h admodum auditur; ceterum quasi aliquod n praemittitur, quod in primis sentitur, quoties vocalis praecedit, e.g. ba-ndha, legitur plane ban-dha.

Evidently our forefathers had the same difficulty with the cerebral letters that we have nowadays, and the 'lingua quasi apoplectica' is still a difficulty to many a griffin.

Bayer relates how a certain Calmuc Ambassador named Bordon, who was then in Petrograd, helped him to acquire this pronunciation, and concludes with a brief notice, received from India, of the Marāthī, Gujarātī, and 'Maura' languages. By the last named, he meant, I suppose, Urdū, which the English subsequently called 'Moors.' All this time he was conducting an active correspondence with LaCroze, in which not only does the Chinese book find due mention, but we meet one of the earliest attempts at genuine comparative philology in the modern sense of the term, -a comparison of the first four numerals in eight different languages.4 During the next ten years, the two friends now and then refer to Indian languages, and to the last LaCroze maintains the correctness of his theory of the Semitic origin of the Indian Alphabet.

All this time,—indeed since the 16th century,—Southern India had been the scene of the activities of Danish and Jesuit missionaries. Schultze has been already referred

Professor Zachariae has drawn my attention to a still earlier account of this formula. It is given in p. 7 of Kircher's 'China Illustrata' (1667), and Kircher transliterates it 'O manipe mi hum, 'which he says means' manipe salva nos.

² 'Brahmanes extraneos et peregrinos.'

³ Commentarii Academiae Scientiarum Imperialis Petropolitanae, IV (1729), 293ff.

⁴ The. Ep. LaCr. i, 58.

to more than once, and if I do not do more than mention the names of such men as Beschi, the Englishman Thomas Estevão (Stephens) of Goa, or (of the Danish Mission at Tranquebar) Fabricius and Ziegenbalg, it is only because these great scholars are not properly connected with the subject under consideration,—the history of the general study of Indian languages. They wrote grammars and dictionaries or translated the scriptures each in or into one or more South Indian languages, but they had no connexion with the study of Indian languages as a whole.¹

Somewhat different is the case of the Roman Catholic Missionaries of Northern India. The Capuchin Missionary Cassiano Beligatti wrote a treatise Beligatti. on the Nagari alphabet, entitled 'Alphabetum Brammhanicum sev Industanum Universitatis Kasí '(Rome, 1771). The book itself would not deserve mention here were it not accompanied by a preface from the pen of Johannes Christophorus Amadutius containing a very complete summary, Amadutius. with copious references to authorities, of the then existing knowledge regarding Indian languages. It correctly describes Sanskrit (written समसक्रीत) as the language of the learned, and next describes the बखा बोलो or ' Beka Boli' (i.e., Bhāshā Bōlī) or common tongue which is found in the 'University of Kasì or Benarès.' He adds that different regions and different languages have their own alphabets, and among the languages he enumerates (1) Bengalensis, (2) Tourutiana [i.e., Maithilī], (3) Nepalensis, (4) Marathica, (5) Peguana [i.e., Burmese or Mon], (6) Singalaea, (7) Telugica, and (8) Tamulica. This book is of further interest because the Nagari and Kaithī characters are set up in moveable type,—the first to be used, I believe, for this purpose in Europe.

Two other later works may here be mentioned in order to wind up the first stage of Indian linguistic studies. The first is the Symphona Abel's 'Symphona.' Symphona' of Iwarus Abel (1782). It is a comparative vocabulary of Tamil, Telugu, Sanskrit, Marathi, Balabanda († also Marathi), Kanarese, Hindőstánī, Könkaṇī, Gujarātī, and Peguan (Burmese). Fifty-three words,—such as parts of the body, heaven, sun, certain animals, house, water, tree, the personal pronouns, the numerals, and so on,—are given in all these languages and compared together. The other is the anonymous 'Alphabeta Indica,' with a preface Paulinus a S. Bartholomaco. by Paulinus a S. Bartholomaeo² (Rome 1791). This is a collection of four Indian alphabets, all set up in moveable types. Finally, Adelung's "Mithridates" (1806 and following years) is a résumé of Adelung. all the linguistic learning of the 18th century, and forms a link between the old philology and the new.

A consideration of this early stage of the enquiry into the languages of India will Results of the old philology. show that during the 17th and 18th centuries there had been laborious accumulation of materials, but hardly any

¹ For the same reason, I make no mention of the first Sanskrit book translated into a European language. This was the "Open Door to Heathendom" by the Missionary Abraham Roger (1651). It was a translation into Dutch of the second and third Satakas of Bhartribari.

² Paulinus a S. Bartholomaeo had in the previous year published a Sanskrit Grammar. Its full title was SIDHARVBAM seu *Grammatica Samscrdamica*, cui accedit dissertatio historico-critica in linguam Samscrdamicam, vulgo Samscret dictam, in qua huius linguae existentia, origo, praestantia, antiquitas, extensio. materuitas ostenditur, libri aliqui ea exarati critice recensentur, et simul aliquae antiquissimae gentilium orationes liturgicae paucis attinguntur et explicantur auctore *Fr. Paulino a S. Bartholomaeo*, Carmelita excalceato, Malabariae Missionario. Romae 1790, 4 (ec typogr. S. Congr. de prop. fide).'

VOL I. PART 1.

scientific study. Such study could not, indeed have been expected in those days. The necessary materials, though increasing gradually from decade to decade, were throughout too scanty for it to have been possible. Nevertheless the period was marked by a steady advance in knowledge beyond the older belief that all languages were derived from Hebrew. In the early years of the 17th century the existence in India of Sanskrit, the sacred literary language, became known, and from this, as a sort of corollary, there arose the belief that besides it there was in addition one general colloquial form of speech used by the vulgar over the whole continent. Λ further development of this belief was the curious error that that colloquial language was Malay, a kind of lingua franca, before which the indigenous speech was disappearing. It took many decades to wipe out this misapprehension and its consequences. The existence of more than one spoken language was the next discovery. This was first associated with collections of alphabets, apparently as mere curiosities and without any reference to the languages for which they were employed. But the knowledge thus gained of diverse alphabets led to a suspicion of the existence of diverse tongues, and this, in its turn, led to the making of collections of versions of the Lord's Prayer, at first full of blunders, but becoming more and more complete and more accurate as the years went on. These collections invited comparisons of their contents, and suggested the first beginnings of comparative philology. It is at this stage that the great names of LaCroze and Bayer come into prominence. They began to make rudimentary classifications of languages based on comparisons of the numerals and similar words, and succeeded in tracing the connexion between the alphabets of Tibet and India, a fact which was destined in later days to have a far-reaching importance. They got into communication with the great pioneer missionaries of Southern India, and, with their help, enriched the mass of materials available for study. In fact, as is shown by Amadutius's preface to Beligatti's 'Alphabetum Brammhanicum', it was on their researches that all subsequent investigations of the period were founded: and it was by following their methods that Iwarus Abel and Adelung were able to make the great advance in scientific exploration that is associated with their names.

At the end of the period we find that Europe had a fairly clear idea of the names and general characters of the principal Indian languages, and that its scholars had begun to compare one with another. The old philology thus on its deathbed gave birth to the new. The materials for classification had been collected and set in order, but no general classification had yet been attempted.

Modern comparative philology dates from the introduction of Sanskrit as a serious object of study, and from the consequent recognition of the existence of an Indo-European family of languages by Sir William Jones in 1786. In his third Annual Discourse to the Asiatic Society [of Bengal], delivered in that year, he said :—

The Mohammedans, we know, heard the people of proper Hindustan or India, on a limited scale, speaking a Bháshá, or living tongue, of a very singular construction, the purest dialect of which was current in the districts round Agrà, and chiefly on the poetical ground of Mat'harà; and this is commonly called the idiom of Vraja. Five words in six, perhaps, of this language were derived from the Sunscrit, in which books of religion and science were composed, and which appears to have been formed by an exquisite grammatical arrangement, as the name itself implies, from some unpolished idiom; but the basis of the Hindustáni,

¹ Asiatic Researches, i. 422,

particularly the inflexions and regimen of verbs, differed as widely from both those tongues, as Arabick differs from Persian, or German from Greek. Now the general effect of conquest is to leave the current language of the conquered people unchanged, or very little altered, in its groundwork, but to blend with it a considerable number of exotick names both for things and actions; as it has happened in every country, that I can recollect, where the conquerors have not preserved their own tongue unmixed with that of the natives, like the Turks in Greece, and the Saxons in Britain; and this analogy might induce us to believe, that the pure Hindi: whether of Tartarian or Chaldean origin, was primeval in Upper Indea, into which the Sanscrit was introduced by conquerors from other kingdoms in some very remote age; for we cannot doubt that the language of the Véda's was used in the great extent of country, which has before been delineated, as long as the religion of Brahmà has prevailed in it.

The Sanscrit language, whatever be its antiquity, is of a wonderful structure: more perfect than the Greek, more copious than the Latin and more exquisitely refined than either; vet bearing to both of them a stronger affinity, both in the roots of verbs, and in the forms of grammar, than could possibly have been produced by accident; so strong, indeed, that no philologer could examine them all three, without believing them to have sprung from some common source, which, perhaps, no longer exists. There is a similar reason, though not quite so forcible, for supposing that both the Gothick and the Celtick, though blended with a very different idiom, had the same origin with the Sanscrit; and the old Persian might be added to the same family, if this were the place for discussing any question concerning the antiquities of Persia.

Here we have speculations not only as to the modern vernaculars of India (which are mainly erroneous), but also as to the connexion of Sanskrit with the languages of Europe. These latter speculations were converted into a scientific certainty by the labours of

Bopp. Franz Bopp, whose first work,—Ueber das Conjugationssystem der Sanskritsprache in Vergleichung mit jenem der
griechischen, lateinischen, persischen und germanischen Sprache,—appeared in 1816, to be
followed by his epoch-making Comparative Grammar, published in 1833 and the following years, and translated into English by E. B. Eastwick in 1865. The history of general
Indo-European philology does not concern us here, and therefore, in order to carry
this particular branch of learning down to our own times, I do no more than mention
the names of Bopp's great successors,—Grimm, Pott, Schleicher, Whitney, Brugmann,
Delbrück, Meillet, and Jespersen.

Returning to inquiries into the modern languages of India, we have seen that here too the problem was originally laid down by Sir William Jones, but accompanied by speculations which subsequent research has shown to be unfounded so far as the Indo-Aryan languages are concerned. Dravidian languages, as a distinct group, were then unknown, but if he had said about them what he did erroneously say about Hindi, he would not have been far from what are now believed to have been the actual facts. Anyhow, the problem, as laid, down by him, was first taken up by the Scrampore

carey and the modern wernaculars. Milliam Carey landed in India in November 1793, and his translation of the New Testament into Bengali appeared in 1801. In the following year versions into other Indian languages were published: but in 1816 Carey found himself on the wrong track and reported to his home correspondents as follows:—

In the prosecution of it [se, one object], we have found that our ideas relative to the number of languages which spring from the Sungskrit were far from being accurate. The fact is, that in this point of view. India is to-day almost an unexplored country. That eight or nine languages had spring from that great philological root, the Sungskrit, we well knew. But we imagined that the Tamul, the Kurnara, the Telinga, the Guzrattee, the Orissa, the Pengalee, the Mahratta, the Punjabee, and the Hindoostance, comprised nearly all the collateral branches springing from the Sungskrit language; and that all the rest were varieties of the Hindee, and some of them, indeed, little better than jargons capable of conveying ideas.

But although we entered on our work with these ideas, we were ultimately constrained to relinquish them. First, one language was found to differ widely from the Hindee in point of termination, then another, and in so great a degree, that the idea of their being dialects of the Hindee seemed scarcely tenable. Yet, while they were found to possess terminations for the nouns and verbs distinct from the Hindee, they were found as complete as the Hindee itself; and we at length perceived, that we might, with as much propriety term them dialects of the Mahratta or the Bengalee language, as of the Hindee. In fact, we have ascertained that there are more than twenty languages, composed, it is true, of nearly the same words and all equally related to the common parent, the Sungskrit, but each possessing a distinct set of terminations, and, therefore, having equal claims to the title of distinct cognate languages. Among these we number the Juypore, the Bruj, the Ooduypore, the Bikaneer, the Mooltanee, the Marawar, the Maguda (or South Bahar), the Sindh, the Mythil, the Wuch, the Kutch, the Harutee, the Koshula, etc., languages, the very names of which have scarcely reached Europe, but which have been recognised as distinct languages by the natives of India almost from time immemorial.

That these languages, though differing from each other only in terminations and a few of the words that they contain, can scarcely be called dialects, will appear, if we reflect, that there is in India no general language current, of which they can be supposed to be dialects. The Sungskrit, the parent of them all, is at present the current language of no country, though spoken by the learned nearly throughout India. It's grammatical apparatus, too, the most copious and complex perhaps on earth, is totally unlike any of its various branches. To term them dialects of the Hindee is preposterous, when some of them. in their terminations, approach nearer the Bengalee than the Hindee, while others approach more nearly to the Mahratta. The fact is, indeed, that the latest and most exact researches have shown that the Hindee has no country which can exclusively claim it as its own. Being the language of the Musulman courts and camps, it is spoken in those cities and towns which have been formerly, or are now, the seat of Musulman princes; and in general by those Musulmans who attend on the persons of European gentlemen in almost every part of India. Hence, it is the language which most Europeans get an idea of before any other, and which indeed, in many instances, terminates their philological researches. These circumstances have led to the supposition, that it is the language of the greater part of Hindoostan; while the fact is, that it is not always understood by the common people at a distance of only twenty miles from the towns in which it is spoken. These speak their own vernacular language, in Bengal the Bengalce, and in other countries that which is appropriately the language of the country, which may account for a circumstance well known to those gentlemen who fill the judicial department, namely, that the publishing of the Honourable Company's Regulations in Hindoostanee has often been objected to, on the ground that in that language they would be unintelligible to the bulk of the people in the various provinces of Hindoostan. Had this idea been followed up, it might have led to the knowledge of the fact, that each of these various provinces has a language of its own, most of them nearly alike in the bulk of their words, but differing so widely in the grammatical terminations, as, when spoken, to be scarcely intelligible to their next neighbours.

The report (which is signed by W. Carey, J. Marshman, and W. Ward) goes on to give detailed proof of the foregoing remarks. Thirty-four speci-Carey's Linguistic Survey. mens are given of thirty-three Indian languages. In each the specimen consists of the conjugated present and past tenses of the verb 'to be,' and of a version of the Lord's Prayer. Each specimen is taken up separately and, word by word, dissected, in order to show that it is not a specimen of a dialect, but of an independent language. The whole discussion is too long to quote, but it is very interesting reading, especially as it is the first attempt at a systematic survey of the languages of India. In this connexion, it is well to remember that its date is 1816, and that its authors were Carey, Marshman, and Ward. The languages considered are as follows (I give the original spelling):-Sungskrit, Bengalee, Hindee, Kashmeera, Dogura [i.e. Dogri], Wuch [i.e. Lahnda], Sindh, Southern Sindh, Kutch, Goojuratee, Kunkuna, Punjabee or Shikh, Bikaneer, Marawar, Juya-poora, Ooduya-poora, Harutee, Maluwa, Bruj, Bundelkhund, Mahratta, Magudha or South Bahar, North Koshula [i.e. Awadhi], Mythilee, Nepal, Assam, Orissa or Ootkul, Telinga, Kurnate, Pushtoo or Afighan, Bulochee, Khassee, Burman.

HODGSON. 13

This list is instructive in two points. In the first place it shows that the Dravidian languages—Tamil, Telugu, Kanarese, and so forth—were not yet recognized as a separate family. That had to await the acute discernment of Hodgson. Here they are looked upon as being just as much Sanskritic as Bengali or Hindī. The other point is that no distinction has been made between language and dialect. We find great languages,—like Burmese, Bengali, or Paṣḥtō—side by side with forms of speech like Jaipurī and Hārauṭī, which are hardly separate dialects—certainly less so than the dialect of Somerset and that of Devonshire. This is due to the fact that, at least in Northern India, there is no word exactly corresponding to our 'language,' as distinct from 'dialect.' All that the average Indian recognizes is dialect. Unless taught by European methods, he has no word for denoting a group of cognate dialects under one general head. He has numerous (hundreds of) dialect names, just as we talk of the Somersetshire and Yorkshire dialects, but no word parallel to our general term, 'English.'

With Carey's report, further inquiry into the general relationship of the Aryan languages of India seems to have been dropped for a considerable period. The lately-formed Asiatic Society in Calcutta was too busy with the study of Sanskrit and Persian to trouble much about the modern vernaculars. Practical grammars of the more important languages were, it is true, compiled in plenty, but there was at first no co-ordinated inquiry into the subject as a whole. On the other hand, the non-Aryan languages at once received the attention of a number of distinguished scholars. The Indo-

Chinese tongues were the first to receive attention. In 1798 Dr. Francis Buchanan published in the Asiatic Researches (Vol. V.) a Comparative Vocabulary of some of the languages spoken in Burma, and three years later D. J. Leyden, in the tenth volume, wrote on the Language and Literature of the Indo-Chinese Nations. Again, in 1837, in Volume VI of the Journal of the Asiatic Society of Bengal, we have a comparison of the Indo-Chinese languages by Nathan Brown, who was also the author of other papers connected with the same subject which later appeared in the Journal of the American Oriental Society. In 1828 (Asiatic

Researches, Vol. XVI) we first meet one name that over-B. H. Hodgson. shadows all the rest,—that of Brian Houghton Hodgson,—as the author of an article on the Language, Literature, and Religion of the Bauddhas of Nepál and Bhot (Tibet). This was followed by a long series of papers on the zoology and ethnology of Nepal, but, nineteen years afterwards, in 1847 (Journal A. S. B. Vol. XVI), he resumes his philological enquiries with a Comparative Vocabulary of the Sub-Himalayan dialects. Then followed a number of important papers, still classics, and still full of varied and accurate information regarding nearly every non-Aryan language of India and the neighbouring countries. Space will not allow me to give even a dry catalogue of the subjects which he adorned. Suffice it to say here that he gave comparative vocabularies of nearly all the Indo-Chinese languages spoken in India and the neighbouring countries, and of the Munda and of the Dravidian forms of speech. These he compared with many languages of Central Asia in the search of one common origin for the whole. So far as I am aware, he was the first Englishman to use the term 'Dravidian' for the languages of Central and Southern India, but he included under that term not only the Dravidian languages proper, but also those of an altogether different family,—the Munda. It is true that he failed to establish his favourite theory of a common origin for all the languages explored by him,—that is a matter still under inquiry, and on

which the opinions of scholars are still divided,—but this hardly diminishes the value of his writings, which contain a mass of evidence on the aboriginal languages of India that has never been superseded. Its hall-marks are the wide extent of area covered, clearness of arrangement, and accuracy of treatment. Hodgson's last paper on Indian languages, on the languages of the broken tribes of Nepal, appeared in 1858, in the twentyseventh volume of the Journal of the Society with which he was so intimately connected, so that his literary activity covered just thirty years. Ten years later, in 1868, there Hunter.

appeared Hunter's "Comparative Dictionary of the languages of India and High Asia", which, with some additions, summarized the results of Hodgson's linguistic collections, and presented them in a form convenient to the student.

The earliest fruit of Hodgson's researches was Max Müller's Letter to the Chevalier

Mundā Languages.

dian, and gave it a name.

Bunsen, published in 1854. In this Müller established, for the first time, the existence of the Munda family of languages as an independent body of speech, apart from the Dravi-Two years later, in 1856, appeared what has ever since been the foundation of research into the tongues of Southern India, Bishop Caldwell's 'Comparative Grammar of the Dravidian or South-Indian Family Caldwell. Dravidian Langof Languages.' Here, for the first time, a group of Indian

uages. languages was treated as a whole by a scholar who was practically familiar with its elements and at the same time a trained philologist. The Indo-Chinese languages also continued to receive study. The indefatigable

Logan published essay after essay in the "Journal of the Indo-Chinese Languages. Indian Archipelago," in which the languages of Burma and Logan. Assam were compared and analysed. Logan wanted the philological training possessed by Caldwell, and hence his work has not retained the same authority as that of the great bishop, but he made many shrewd suggestions as to the relationship existing between the languages with which he dealt, and these have been confirmed, or rediscovered (for his writings are hardly known at the present day), by subsequent inquirers. Forbes's

posthumous 'Comparative Grammar of the Languages of Forbes. Further India' (1881) is but a tantalizing fragment, and it fell to the late professor Ernst Kuhn to attack seriously one Kuhn. branch of the question and to put the philology of the lan-

guages of Further India upon a sound footing. His Beiträge zur Sprochenkunde Hinterindiens in the 'Sitzungsberichte' of the Royal Bavarian Academy of Sciences (1889) has been the starting point for a number of younger students who are writing at the present

day, amongst whom special attention must be drawn to Pater W. Schmidt. Austro-Asiatic. Austric. W. Schmidt's brilliant work on 'Die Mon-Khmer-Völker' (1906). Pater Schmidt has here proved not only that the Mon-Khmer languages form a link between the Munda languages of India proper and the languages of Indonesia, -grouping the first two, with Khāsī and some other minor forms of speech, under the

¹ He gave it himself this name, and by a recognized convention among all scholars, a discoverer has the right of naming his discovery and of expecting that other scholars will employ that name, unless it is clearly proved to be wrong So it is in Botany and in Zoology, and so it ought to be in Philology; but later writers transgressed against the comity of scholarship, and invented other names for the family, such as Kol, or the absurd 'Kolarian,' a name not only liable to misinterpretation, but also based on an imaginary statement that the speakers hailed from Colar in Southern India, which has no foundation whatever in fact Throughout the Survey. I therefore adhere to the name given to the family by its first discoverer. It may be added that this name was used in Sanskrit literature for the people who spoke these lang rages. centuries before Max Müller was born. See page 35, note.

one name of the 'Austroasiatic' languages,—but has gone much further. He has shown that the languages of Indonesia, Melanesia, and Polynesia also form a group which he terms the 'Austronesic.' The Indonesian languages thus form a link between the Austroasiatic and the Austronesic languages, the whole forming one great linguistic family,—called the 'Austric'—extending from the hills of Central India to Easter Island, off the coast of South America, and covering a wider area even than that of the Indo-European tongues.

Indo-Aryan languages also received attention in the Bengal Asiatic Society. The earlier contributions were grammars and vocabularies of particular languages or dialects, and do not immediately concern us, though mention must be made of the wonderful pioneer work done in this direction by Major Robert Leech. We owe to his indefatigable diligence and accurate observation quite an extraordinary number of vocabularies and grammars of hitherto untouched languages. Between 1838 and 1843 he gave us grammars of Brahūī, Balōchī, Pañjābī, Paṣḥto, Bundēlī and Kāshmīrī, besides vocabularies of Ōrmurī, Pashai, Laghmānī, Khōwār, Tirāhī, and Dīrī. For some of these his work is still our only authority, for the languages are now either extinct or spoken in tracts not since visited by British officers. For others, his work was superseded only at the end of the nineteenth century.

It was in Bombay that the comparative study of the Indo-Aryan languages was resumed thirty-seven years after the publication of Carey's Report. We find the evidence of this in the fourth volume of the Journal of the Bombay Branch of the Royal Asiatic

Society. In the number for January 1853 Sir Thomas Sir Erskine Perry. Erskine Perry, then Chief Justice of Bombay and President of the Society, published his paper 'On the Geographical Distribution of the principal Languages of India.' He divided the languages of India into two great classes,— 'the language of the intruding Arians, or Sanskritoid, in the North, and the language of a civilized race in the South of India, represented by its most cultivated branch, the The former he reckoned as seven in number, viz., Hindi, Kāshmīrī, Bengali, Gujarātī, Marāthī, Konkanī, and Oriyā, with ten dialects. Panjābī, Lahndā (called by him Multáni), Sindhī, and Mārwārī he looked upon as all dialects of Hindī. Maithilī he classed as a dialect of Bengali. Since he wrote, it will be seen that many of the forms of speech that he looked upon as dialects have been raised to the dignity of being recognized as independent languages. The Southern languages he called 'Turanian or Tami-He did not seem to be aware of the term 'Dravidian' which was first used simultaneously in 1856 both by Hodgson and by Caldwell. Perry mentioned Telugu, Kanarese, Tamil, Malayalam, Tulu, and (with a query) Gondi. He gave brief descriptive accounts of the general characteristics of each language, and carefully indicated the habitat of each, the whole being illustrated by an excellent language map. It will be observed that he altogether ignored the Indo-Chinese languages, and that he made no mention of the Munda languages, which were not identified by Max Müller till the following year. While Perry confined himself to the geographical distribution of the Indian languages, another Bombay scholar was studying the interaction between Indo-Aryan and Dravidian The same volume of the Journal of the Bombay Branch of the R. A. S. languages.

contains J. Stevenson's Comparative Vocabilary of the Non-Sanscrit Vocables of the Vernacular Languages of India.

Here the important question of the borrowing of Dravidian words by the different Indo-

Aryan languages, and of its ethnical significance is treated for the first time, and with great acumen. It was inevitable that, at that stage of linguistic science, many of Stevenson's comparisons should be mistaken, but still the article remains a solid contribution to the general linguistic science of India.

On the other side of India, in 1867, John Beames, a young Indian Civilian of barely ten years' service, attracted attention by the publication of a little summary of what was then known about all the languages of the country in his 'Outlines of Indian Philology.' Five years later appeared the first volume of his well-known 'Comparative Grammar of the Aryan Languages of India.' The same year witnessed the publication of Dr. Hoernle's first essays in the Journal of the Asiatic Society of Bengal on the same subject, which were followed in 1880 by his 'Grammar of Eastern Hindi compared with the other Gaudian Languages.' These two excellent works, each a masterpiece in its own way, have since been the twin foundation of all researches into the origin and mutual relationship of the languages of the Indo-Aryan family of speech.

All this time, for many decades, grammars and vocabularies of individual forms of Indian speech had been issuing in considerable numbers. For the better known languages, such as Hindostānī, Marāṭhī, or Bengali, they came out in scores, and it must be confessed that most of them were but labour wasted. Each writer copied his predecessor, according to his capacity, corrected a few mistakes or not, introduced a few more or not, and proclaimed a new gospel which was not new. Now and then a work of striking merit, such as Molesworth's Marāthi Dictionary, Trumpp's Sindhi or Kellogg's Hindi Grammar, appeared, but most of the rest were sorry stuff and were hardly wanted. The less-known languages, though equally important, were studiously left alone. Carey wrote his Panjābi grammar in 1812, and, except for a brief sketch by Leech, it was forty years before anyone again attempted to describe in a formal manner the language of the Sikkhs. But, if this was the case with languages whose speakers were numbered by millions, the state of affairs regarding the scores of minor languages spoken by thousands, the languages of the hill-tribes of Central India, of the Tibeto-Burmans of Eastern Bengal and Assam, was much worse. An enthusiast wrote a grammar or compiled a vocabulary here and there. Government encouraged its officers to make more, and a few did so,-excellent works in their way.

Bengal, printed a set of vocabularies compiled by local officials, but, with this exception, very little was done. Even with the help of foreigners the work hardly progressed. The first serious grammar of Paṣḥtō,—the language of Afghanistan,—was written by a Russian—Dorn—and up to quite lately, although numerous elementary grammars have been written by Englishmen, all the scientific study of this form of speech was carried on by French or Germans. Similarly, we owe the only existing grammar and vocabulary of Nēwārī, the principal language of Nepal, to another Russian. Examples of this kind might be multiplied, but, even with outside help, the total result was that our knowledge of these minor languages, a knowledge most important for the purposes of administration as well as in the interests of science, was scanty, unevenly distributed, and unequal. In fact, so late as the year 1878 no one had as yet made even a catalogue of all the

Modern Languages

of the East Indies" in spite of all the industrious learning and acumen of its author, was

confessedly a compilation of existing materials, and these materials were equally confessedly imperfect. It was a tentative work, and was primarily intended to stimulate

enquiry, not to close the subject.

Dr. Cust's work succeeded. It did stimulate enquiry. For the first time Government, as well as European scholars, were enabled to see what little had been done and how much remained to be done. People talked about it and wrote about it. It was finally discussed at the Oriental Congress held at Vienna in Vienna Congress of 1886. 1886, of which Dr. Cust was himself a member; and the assembled scholars passed a resolution urging upon the Government of India to undertake 'a deliberate systematic survey of the languages of India." The proposal was favourably received, but the adoption of a detailed scheme was delayed at first on financial grounds. In the year 1894 the matter came within the region of practical politics, and the preliminary details came under discussion. The first question to be settled was the extent of the proposed survey. After consultation with Linguistic Survey of India. the various local Governments, it was decided to exclude the Provinces of Madras and Burma and the States of Hyderabad and Mysore from its operations, so that these would cover, from the West to the East, Baluchistan, the North-West Frontier, Kashmir, the Punjab, the Bombay Presidency, Rajputana and Central India, the Central Provinces and Berar, the United Provinces of Agra and Oudh, Bihar and Orissa, Bengal, and Assam, then containing a population of about 224,000,000 out of the 294,000,000 of our Indian Empire.

Then, as to the nature of the Survey. After some discussion it was decided that it was primarily to be a collection of specimens, a standard Basis of the Survey. passage was to be selected for purposes of comparison, and this was to be translated into every known dialect and sub-dialect spoken in the area covered by the operations. As this specimen would necessarily be in every case a translation and would, therefore, run the risk of being unidiomatic, a second specimen was also to be called for in each case, not a translation, but a piece of folklore or some other passage in narrative prose or verse, selected on the spot and taken down from the mouth of the speaker. Subsequently a third specimen was added to the scheme—a standard list of word and test sentences originally drawn up for the Bengal Asiatic Society in 1866 by Sir George Campbell and already widely used in India. It was obviously desirable that, for purposes of comparison, this list should be retained in its entirety, and so it was done, but a few extra words were added. The foundation of the Survey is thus these three specimens,—the standard translation, the passage locally selected, and the list of words and sentences. It was then determined that the first specimen should be a version

The resolution was proposed by Dr. Bühler and seconded by Professor Weber. Among its supporters by word or by letter were Messrs. Barth, Bendall, Cowell, Cust, Grierson, Hoernle. Max Müller. Sir Monier Monier-Williams. Messrs. Rost, Sayce, and Separt.

^{*} I name the Provinces as they are divided nowadays. In 1894, Bihav and Orissa formed a part of Bengal. It may be added that, at the present time, a Linguistic Survey of Burma is in progress.

³ J. A. S. B., Vol. XXXV, Pt. ii, special number, pp. 201ft.

of the Parable of the Prodigal Son, with slight verbal alteration to avoid Indian prejudices, a passage which has been previously used and is admirably suited for such purposes. ¹

This having been decided, I was entrusted with the task of collecting the specimens and of editing them for the press. With this object, the various local officers were instructed to render me the necessary assistance, and I should be ungrateful did I not cordially express my gratitude for the sympathetic and ungrudging help accorded by my brethren in the service of the Indian Governments and by many others, Europeans and Indians, missionaries and laymen.

Before getting the specimens, we had to find out what it was that we wanted specimens of, and the first thing to be done was to compile a list Preliminary lists of Languages. of all the varieties of speech then known to exist in the area under survey. Forms were sent out to each district officer and political agent with a request that he would fill in the name of every language spoken in his charge, together with the estimated number of speakers of each. The forms came back by degrees, and their contents, I must confess, rather appalled me. The total number of languages reported from the survey area was 231 and of dialects 774. Examination fortunately showed that some few names were returned over and over again from different provinces, and also that it was probable that in many cases the same form of speech was reported under different names. I may say that, now that the process of elimination has been completed, the number of languages spoken in that portion of the Indian Empire subjected to the Survey amounts to 179, and the number of dialects to 514, all of which are described in these volumes. For the whole Indian Empire, the Census of 1921 gives 188 languages, the total number of dialects being unknown.

The preparation of these lists was no easy mechanical process,—the sort of thing that could be done by an intelligent clerk. I pass over the difficulties encountered in compiling the local lists into general lists, one for each pro-Compilation of the Lists. vince. Those who have had experience in putting together hundreds of returns from different sources will know its laborious character, and those who have not can imagine it. But great difficulty was often experienced in preparing the local returns that formed the materials on which I had to work. Each officer knew about the main language of his district, and, if he had been there some time, had probably a working acquaintance with it. But over and over again no one with any education knew anything about the little hole-in-the-corner forms of speech which were discovered as soon as search was instituted. Let me give one example. In one of the Himalayan districts, of which the main language was Aryan, a small colony was discovered which originally bailed from Tibet, and which retained its own language. official knew it, and intercourse with them was conducted through the medium of a lingua franca. The district officer entered the name of this language in his return. This name was not one word, or two words. It was a solemn procession of weird monosyllables wandering right across a page. I could make nothing of it, nor could my Tibetanknowing friends. It should be remembered that it was a foreign expression written

It contains the three personal pronouns, most of the cases found in the declension of nouns, and the present. Past. and future tenses of the verb.

² These figures will no doubt be increased when the Survey now in progress in Burma is completed.

down in English letters as it sounded to the untrained ear of a person entirely unacquainted with it. All my endeavours to identify the name failed. At last I wrote to the district officer and asked him to make further inquiries. In reply it was explained that investigation had shown that the monosyllabic procession was not the name of any language, but was the local method of expressing in broken Tibetan 'I don't understand what you are driving at.'

Another difficulty was the finding of the local name of a dialect. Just as M. Jourdain did not know that he had been speaking prose all Local Language-nomenclature. his life, so the average Indian villager does not know that he has been speaking anything with a name attached to it. He can always put a name to the dialect spoken by somebody fifty miles off, but, — as for his own dialect,—'O, that has no name. It is simply correct language.' It thus happens that most dialect names are not those given by the speakers, but those given by their neighbours, and are not always complimentary. For instance, there is a well-known form of speech in the south of the Punjah called 'Jangali,' from its being spoken in the 'Jungle,' or unirrigated country bordering on Bikaner. But 'Jangali,' also means 'boorish' and local inquiries failed to find a single person who admitted that he spoke that language. 'O ves, we know Jangali very well,—you will find it a little further on,—not here.' little further on and get the same reply, and pursue your will-o'-the-wisp till he lands you in the Rajputana desert, where there is no one to speak any language at all. These illustrations show the difficulties encountered by local officers in identifying dialects and naming them.

From the local lists received, as described above, provincial lists were compiled and printed. These did not profess to be accurate catalogues of the tongues of India. They claimed only to represent the then existing knowledge of the state of affairs as reported by officers with local experience, who did not pretend to be philological experts. As such, they formed the basis of the Survey operations. When the lists were printed, the dialects were divided into two main classes, distinguished by a difference of type, viz., (1) those which were vernaculars of the localities from which they were reported, and (2) those which were spoken by foreigners in each locality. The latter were once for all excluded, and attention was thenceforth devoted only to the former.

Each district officer was now asked to provide a set of the three specimens of each language locally vernacular in his district. Careful instruc-Collection of specimens. tions were given for the preparation of these specimens. It will be remembered that the first was to be a translation of the Parable of the Prodigal Son. It was recognized that in many, nay, in most cases, the translators would not know English, and in order to assist them a volume of all the known versions of the parable in Indian languages was compiled with the help of the British and Foreign Bible Society, of local missionaries, and of one or two Government officers who were specially interested in the Survey. This collection, which was published in 1897, under the name of 'Specimen Translations in various Indian languages,' contained sixty-five versions, and, though primarily intended as a tool to aid the execution of the scheme, aroused some temporary interest among the scholars of Europe. For the Survey, it was anticipated that whoever might have to prepare a specimen, even if he did not know English, would find in this book at least one version from which he could make a translation; and this, in fact, was borne out by subsequent experience.

The second specimen, which was to be locally selected, presented no similar difficulties, but instructions were given that all specimens were to be written (a) in the vernacular character (if there was one) and (b) in the Roman character with a word for word interlinear translation. The second specimen was also to be furnished with a free translation into good English. As to the style of translation into the vernacular, local officers were told that the language of literature was always to be avoided. What was to be aimed at was the acquisition of specimens in the home language of each translator, whether it was looked upon as vulgar patois or not. For the third specimen, the standard list of words and sentences, blank books of forms were supplied, which needed only to be filled up.

As each provincial list of languages was completed, the circulars calling for specimens were issued. The latter began to arrive in 1897, and most of them were received by the end of 1900, though a few belated specimens continued to come at irregular intervals during the succeeding years. The editing and collating of the specimens began in 1898. The first rough work was done in India, but in 1899 I returned to England, where for some years I had the efficient aid of my Assistant Dr., now Professor, Konow of Christiania.

The editing of the specimens has been an interesting work, but it involved some unexpected difficulties. Before anything could be printed, a general scheme of classification had to be decided upon, and that on a very imperfect knowledge of the materials. As the work went on discoveries were made which rendered revisions of the classification necessary; and sometimes these were made too late, so that the materials have not always been arranged as, with further knowledge, I should like them to be arranged now. This was especially the case in regard to the Indo-Chinese languages, in which my Assistant and myself were often walking on ground which hitherto had been untrodden, and had to deal with languages for which no grammars or dictionaries existed. Here mistakes in classification were inevitable; but I am glad that I can think that none of first class importance were made, and that, on the whole, though I might now group a few individual languages differently from the manner in which they have been grouped in the published volumes of the Survey, my present knowledge would not lead me to make any substantial alteration.

I have never counted the total number of specimens received. They amount to several thousands, and it stands to reason that it was not possible to print them all. The surplusage was deliberately estimated for. It was calculated that the specimens would vary in value. Several would be received of each dialect. Some would be prepared carefully, others ignorantly, others carelessly. Many of them would come from the mouths of uneducated people, hardly able to grasp the idea of what was required. A mass from which to select was therefore a desideratum, and this, in most cases, was secured. It is only in the case of a few less-known dialects of the Himalaya and of the Assam frontier that single specimens were obtained. These were, in all cases, forms of speech which had never been recorded in writing before, and mistakes in recording them were to be expected. Thanks to the constant sympathy and ungrudging aid given by our frontier officers,—the most enthusiastic among my helpers,—many doubtful points were cleared up by correspondence, and I hope that in after years it will be found that these specimens are not very wrong. Absolutely accurate we cannot expect them to be.

To give an example of the difficulties experienced, I may mention that the correction of one specimen was delayed for over six months by a fall of snow in the Hindūkush, which prevented the Political Agent at Chitral obtaining the services of the only getatable bilingual speaker of one of the Pāmīr dialects. Again, in the case of one of the Kāfir languages of the Hindūkush, no one who spoke it could at first be got hold of. At length, after a long search, a shepherd of the desired nationality was enticed from his native fastness to Chitral. He was exceptionally stupid, probably very much frightened, and knew only his native language. A Bashgal Shekh was found who knew a little of it, and who also knew Chitrālī, with his aid the translation of the Parable was made through Bashgalī and Chitrālī. Much accuracy could not be expected from the result; but, with care and the assistance of the local officers, a version was ultimately made, which, though it contained some passages that I have been unable to analyse completely, has very satisfactorily complied with the somewhat stringent philological tests to which it has been subjected.

This was by no means an isolated example. There were scores of languages for which no one could be found who knew any one of them and at the same time English. It might be thought, for instance, that our officials would be familiar with most of the languages spoken in the neighbourhood of the port of Chittagong. Yet there is an instance on record of a criminal case which was tried in the Chittagong Hill Tracts. One of the witnesses was a woman who knew only the Khami language. This was translated into Mrū, which was then translated into Arakanese, which was again translated into the local dialect of Bengali, from which version the Magistrate recorded the quadruply refracted evidence in English. This makes no reflection on the officer concerned. There are parts of India which seem to have had each a special Tower of Babel of its own. From the little Province of Assam, with its population of only about six and a half millions, — or a million less than that of London,— eighty-one Indian languages were returned at the Census of 1911, and it contained others that were not specifically returned. Mezzofanti himself, who spoke fifty-eight languages, would have been puzzled here.

As each dialect was examined, a specimen or specimens of it were selected for publication and made ready for the press. From the specimens a sketch of the grammatical and other peculiarities was prepared, and reference was made to any point worth noting about the speakers. Dialects were then grouped into languages, and for each language a somewhat elaborate introduction was provided, sketching the habitat and number of speakers; distinguishing the dialects and comparing their characteristics; giving, when known, the ancient history of the language, and defining its relationship to other members of the same family; describing briefly the salient points of the literature, when there was one; supplying a bibliography as full as we were able to make it; and concluding with a sketch of the grammar. The results are to be found in the volumes of the Survey, to which this is an Introduction.

Throughout the whole series of operations, one thing has been steadily borne in mind—that these results were not to be bundles of theories, but collections of facts. The languages had to be arranged in some order or other, and this necessitated grouping, and grouping necessitated the

adoption of theories as to relationship. So much could not be helped; but beyond this every effort has been made to prevent the Survey becoming an encyclopædia of Indian philological science. That will, we may hope, follow when scholars more competent than the present writer have had time to digest the immense mass of ordered facts now placed at their disposal. Indeed, a beginning has already been made. Reference has already been made to Pater Schmidt's discoveries regarding the Austric languages, and it has been a legitimate source of gratification to me to observe the free use of the Survey which has been made by Monsieur Jules Bloch in his researches into Marathi, by Professor Turner and Professor Suniti Kumār Chatterji in their important studies in Gujarātī and Bengali, and by Dr. Paul Tedesco in his luminous essays on the history of Arvan languages. One interesting result of Pater Schmidt's inquiries may here be added, as it has a direct connexion with the Survey. The Munda languages, as we know, belong to Chota Nagpur and the centre of India. It is also a familiar fact that the languages spoken in the Himalaya, far to the north of these Munda languages, are Tibeto-Burman in character. But even here the Survey shows us that there is a line of peculiar forms of speech, extending from Darjiling to the Panjab, that show evident traces of a previously existing language of the Munda family, which has been overlaid, so to speak, by the Tibeto-Burman of the later immigrants. There is thus evidence to show the existence, at some very ancient time, of a common language of which traces are still visible from Kanawar in the Panjab down through Further India and across the Pacific Ocean as far as Easter Island and New Zealand. Philology is not to be confounded with Ethnology, and here we may leave these interesting facts in the hands of ethnologists for further examination.

In the course of the Survey, it has sometimes been difficult to decide where a given form of speech is to be looked upon as an independent lan-'Language' and 'dialect' guage, or as a dialect of some other definite form of speech. In practice it has been found that it is sometimes impossible to decide the question in a manner which will gain universal acceptance. The two words 'language' and 'dialect' are, in this respect, like 'mountain' and 'hill.' One has no hesitation in saying that, say, Everest is a mountain, and Holborn Hill, a hill, but between these two the dividing line cannot be accurately drawn. Moreover we often talk of the 'Darjiling Hills' which are over 7,500 feet high, while everyone calls Snowdon, with its poor 3,500 feet, a mountain. 'Language' and 'dialect' are often used in the same loose way. In common use we may say that, as a general rule, different dialects of the same language are sufficiently alike to be reasonably well understood by all whose native tongue is that language, while different languages are so unlike that special study is needed to enable one to understand a language that is not his own. This is the explanation of the Century Dictionary,2 but the writer adds that 'this is not an essential difference,' and nowhere is this proviso more needed than in considering the Aryan languages of Northern India. There, mutual intelligibility cannot always be the deciding factor, for the consideration is obscured by the fact that between Bengal and the Panjah every individual

¹ Before the pages of the Survey could be put in type, it was necessary to draw up a skeleton scheme of the volumes of which it was to consist. This was done when I had a very indefinite idea of the extent of the work that lay before me, or of the number of dialects that would come under notice, and accounts for the unwieldy size of some of the volumes and for the inconvenient method of dividing some of them into two or more parts. Once the general plan of the arrangement of the volumes was laid down, it was unadvisable to alter its main outlines.

S. v. 'Language.'

who has received the very slightest education is bilingual. In his own home, and in his own immediate surroundings he speaks a local idiom, but in his intercourse with strangers he employs or understands some form of that great lingua franca,—Hindī or Hindōstānī. Moreover, over the whole of this vast area,—including even Rajputana, Central India, and Gujarat,—the great mass of the vocabulary, including nearly all the words in common use, is, allowing for variations of pronunciation, the same. It is thus commonly said, and believed, that throughout the Gangetic Valley, between Bengal and the Panjab, there is one language, and one only, Hindī, with numerous local dialects. From one point of view this is correct, and cannot be denied. Hindī or Hindōstānī is everywhere the language of administration, and is the one medium of instruction in the rural schools. The people, as I have said, being bilingual, little or no inconvenience is caused in practice by the employment of the assumption, and no one in their senses would wish to complicate administration by the introduction of a confusion of tongues.

And yet, when these numerous so-called dialects of this 'Hindi' are examined by the philologist, and when he attempts to group and classify, he is at once confronted by radical differences of idiom and construction. Some of these dialects are as analytical as English,—others are as synthetic as German. Some have the simplest grammar, with every word-relationship indicated, not by declension or conjugation, but by the use of help-words; while others have grammars more complicated than that of Latin, with verbs that change their forms not only in agreement with the subject, but even with the object. To look upon all these as dialects of a single language is as philologically impossible, as it would be, say, to describe German as a dialect of English; and hence, in the Linguistic Survey, they have been sorted out, according to their grammatical systems, into three groups, each of which is given the dignity of a language,— Bihāri, Eastern Hindi, and Western Hindi. This division has not escaped criticism. For instance the writer of the Report on the Census of the United Provinces for 1921 says that 'the difference between speaking to a villager of Gorakhpur [where the language is Bihārī] and to a jungleman of Jhansi [where the language is Western Hindī] is precisely the difference between speaking to a peasant of Devon and to a crofter of Aberdeen. If you are intelligible to the one you can with patience make yourself intelligible to the other.' I myself have never had an opportunity of personally comparing the dialects of Devon and of Aberdeen, but I would suggest that the true point of difference has been here missed. The question is not whether an educated third person can master the two dialects, but whether a Devon peasant suddenly transported to Aberdeen would be able to communicate with the surrounding crofters. I fear that a considerable amount of patience would have to be exercised in such a case before intercommunication could be established, and even then it would be helped out by idioms borrowed from the language of Uncle Toby's Army in Flanders.

This brings us back to the proviso stated by the writer in the Century Dictionary, to which I have already drawn attention. The differentiation of a language does not necessarily depend on non-intercommunicability with another form of speech. There are also other powerful factors to be considered, if we are to look at the subject from a scientific point of view. First and foremost, there is what I have already referred to,—grammatical structure. Our peasant of Gorakhpur may or may not be intelligible

¹ Report, Chapter IX, § 3.

to the jungleman of Jhansi, but that does not do away with the fact that his language is highly synthetic, with a verb the conjugation of which is more complicated than that of Latin. The Jhansi jungleman, on the contrary uses a tongue with hardly any synthetic grammar at all. His verb has but one real tense, and two participles. All the other relations of time are indicated by the combination of these participles with help-words. The vocabulary of the two forms of speech may be very similar, but the whole grammatical structure of the one is radically different from that of the other. It is impossible, from the point of view of science, to group them together as dialects of a common language.

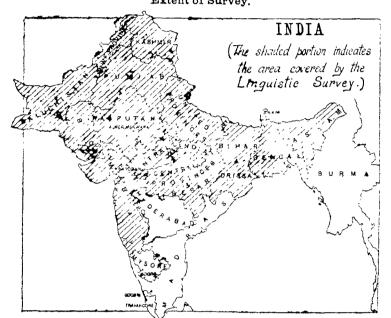

There is another factor which exercises influence in this differentiation. It is nationality. It is said that some English peasants would in Holland find little difficulty in making themselves understood, or in understanding what people say. Yet no one would deny that Dutch and English are distinct languages; and this factor is all the stronger when each nationality has developed an independent literature. There is an excellent illustration of this in Assamese. This form of speech is now admitted to be an independent language,—yet if merely its grammatical form and its vocabulary are considered, it would not be denied that it is a dialect of Bengali. It is certainly as closely related in these respects to the standard form of that language as is the dialect of Bengali spoken in Chittagong. Yet its claim to be considered as an independent language is incontestable. Not only is it the speech of an independent nation, with a history of its own, but it has a fine literature differing from that of Bengal both in its standard of speech, and in its nature and content. Here, therefore, we have an example of a language differentiated from its neighbours not by mutual unintelligibility but by nationality and literature.

GENERAL RESULTS OF THE SURVEY.

CHAPTER I.—INTRODUCTORY.

As already stated, this Linguistic Survey does not cover the whole of India. The Extent of Survey.

Provinces of Madras and Burms

Provinces of Madras and Burma and the States of Hyderabad and Mysore were excluded from the sphere of its operations. annexed map shows at a glance the areas included and excluded. The Survey gives estimates of the number of people speaking each language and dialect. It is to be regretted that these figures are ultimately based on the Census Survey based on Census of 1891. 1891, but no other course was practicable. It will, however, be found that, allowing for the necessary ad-

justments and for the growth of population in the intervening thirty years, the totals for the various languages agree remarkably with those given in the Census of 1921. The reason for the adoption of the Census of 1891 as the basis of the Survey is that the latter began its operations in 1894. Generally speaking, except when special reasons suggest a contrary course, the linguistic tables of an Indian Census deal with languages only. They are not concerned with dialects. On the other hand, for the purposes of a Linguistic Survey, an exhaustive conspectus of all the dialects of each language examined forms a necessary part of its operations. As explained in the preceding chapter, the first thing done in this Survey was to obtain lists of dialects from each of the local areas with which it was concerned. They were furnished by the officers in charge of these areas in 1896 and the following years. Each local official had at hand the language totals of his District or State according to the Census of 1891. With the aid of his local knowledge, and as the result of local inquiries, he was able to state what dialects of each language were spoken in his charge, and how many speakers there were of each. The total for the dialects of each language had, of course, to agree with the then existing figures for the language under which they were grouped, and the figures for the dialects were in this way indirectly based upon the Census of 1891. It took nearly three years to correct and arrange the figures so obtained, and it would be a work of too great labour to do it all over again on the basis of a later Census. Only in the case of a few languages, principally those of the North-West Frontier, was it possible, for special reasons, to atilize the figures of the later Census of 1911.

The figures of the Census of 1921 deal with a population of 316 millions. The Survey figures deal only with 290 millions. The difference is mainly due to the large areas excluded from the Survey, but the growth of the population is also to be taken into account. In 1891 that population was 287 millions as against the 316 millions of 1921.

If we take the figures of the Survey as they stand, we find that 872 different Number of Languages and languages and dialects are recorded. This is the number found in the list given in Appendix I, in which the figures for each are compared with those of the Census of 1921. But in this enumeration there is a good deal of double counting, as each language and each dialect is there given a separate number. A better idea of the results will be gained from the consideration that the Census of 1921 records 190, and the Survey records 179 languages, as distinct from dialects. When counting dialects, it must be borne in mind that, in order to make the total for the dialects tally with the number of the speakers of the language of which they form the members, it has been necessary to count the standard form of the language as one of the dialects. There are also, inevitably, cases in which a language has been returned, but its dialects not mentioned. For instance, the Khāsi language (No. 8 in the list) and its dialects are arranged as follows:— Khāsī, Standard, Lyng-ngam, Synteng, War, Unspecified. Here, if we count Khāsī in the list of languages, we must omit 'Standard' and 'Unspecified' in counting our list of dialects and languages, or we shall be recording the same form of speech twice, or perhaps three times, over. Hence, in the above example, we can count only three dialects as additional to the standard Khāsī language. On this principle, the 1921 Census has recorded 49 dialects in addition to the general language-names. The Survey, on the other hand, has recorded no less than 544 dialect-names in addition to the standard and unspecified forms of the 179 languages. The various forms of speech noted are therefore 237 (188+49) in the Census, and 723 (179+544) in the Survey. of these 723 is described in the Survey, in most cases with more or less complete grammatical accounts. A summary of the details of these figures is as follows:—

				SURVE	FIGURES.	CENSUS FIGURES.		
				Lauguages.	Dialects.	Languages.	Dialects.	
Indo-Nesian Languages .		•	,			2	***	
Austro-Asiatic Languages				7	14	16	11	
Mōn-Khmēr Branch .			• 1	1	3	10		
Muṇḍā Branch .	•		•	6	11	6	11	
Karen Languages	•			•••	•••	1	14	
Man Languages	•			•••	•••	2	•••	
Siamese-Chinese Languages	ı	•	•	3	4	. 7	•••	

The Survey figures therefore exceed the Census figures of 1891 by three millions. The excess is due to the fact that, although a large part of India was excluded from the operations of the Survey, the latter also covered large tracts, especially on the North-West Frontier, to which that Census did not extend. For the excess areas, the figures of the 1911 Census have, so far as was possible, been adopted.

² The full details will be found in Appendix IA, pp. 411 ff.

It will be noticed that the Sub-Family that contains the greatest number of languages is the Tibeto-Burman. The words in these languages are all either monosyllables, or are built up on a monosyllabic basis, and are hence peculiarly liable to change. Moreover, so far as the area covered by the Survey is concerned, the speakers of the languages of this Sub-Family all live in mountainous districts. As a rule each tribe is separated from its neighbours, and languages thus quickly split up into dialects, and each dialect easily develops into a distinct language. In this way, while the number of languages is great-the number of speakers of each, averaging about 17,000, is small.

On the other hand, while there are only 17 Indo-Aryan languages, the number of their speakers is 226 millions, spread over the plains and hills of Northern India. Here numbers, nationality, and habitat have combined to produce no less than 345 dialects in addition to the 17 standard languages. In this respect, the contrast between the Tibeto-Burman and the Aryan languages is marked. The monosyllabic Tibeto-Burman speech easily divides and subdivides into numerous distinct and mutually unintelligible languages. If, as an example of similarly circumstanced Aryan forms, we take the Eranian languages spoken in and near India and the Dardic languages, we find that the two branches, like the Tibeto-Burman languages, are spoken in inhospitable mountain tracts, but that they persist. If they do sub-divide, the division is not into mutually unintelligible languages, but into mutually intelligible dialects, held together by a common grammatical basis. Their

synthetic character preserves each as a constant whole, and even in their rugged habitats they are only 21 in number spread over a tract extending from Kashmir to the Persian frontier and from the Pāmīrs to the Arabian Sea. In northern India, where there are fewer hilly tracts to isolate the speakers, the Indo-Aryan languages are still less in number; and, though the dialects are many, the relationship of each to one or other of the great parent languages is apparent to the most casual observer.

It has been already stated that the Survey deals with the languages spoken by about

290 millions of people. The following is a summary of the number of speakers for each linguistic family:—

									NUMBER OF SPEAKERS.			
		-							According to the Linguistic Survey.	According to the Census of 1921.		
										·

						То	TAL		290,085,893	315,525,781		

As previously explained, the difference between the two totals is mainly due to the fact that the area covered by the Survey was not the same as that covered by the Census. A more detailed summary will be found in Appendix IB (pp. 418 ff.), and the complete figures for each language are given in Appendix I (pp. 389 ff.). Roughly speaking, the total number of speakers whose languages were surveyed corresponded to three-quarters of the entire population of Europe. Of these, the speakers of the Austric languages were about equal to the population of Denmark, those of the Tibeto-Burman languages to half that of Switzerland, those of the Dravidian languages to more than the combined populations of the United Kingdom and Canada, while the speakers of the Indo-European languages about equalled the combined populations of the United Kingdom, Norway, Sweden, Denmark, Germany, Austria, France, Spain, Italy and Greece.

Nowhere are there presented stronger warnings against basing ethnological theories on linguistic facts than in India. There are many instances of tribes which have in historic times abandoned one language and taken to another. A striking example is afforded by the tribe of Nahāls in the Central Provinces. These people appear to have originally spoken a Muṇḍā language

¹ In Appendix I it will be noticed that many of the figures are given in round numbers. In such cases it is to be understood that the figures are estimates, and are not based on actual counting. These estimates were in every case made by officials with local experience, and, except where the reverse is stated, may be received as trustworthy.

akin to Kūrkū. It came under Dravidian influence, and has become a mixed form of speech, half Munda and half Dravidian. This, in its turn, has fallen under the spell of Aryan tongues, and is now in a fair way to becoming an Aryan language. If we were to judge by language, a hundred years ago we should have called the tribe Muuda. Ten years ago it was quite possible to claim it as Dravidian, and fifty years hence it would probably be described as an Aryan caste. The 'unholy alliance' between the two sciences has long been condemned, and has now fallen into disrepute, and I have hence, in the following pages, refrained so far as was possible from discussing questions of racial origin. When I have done so, it has only been to bring forward theories regarding the origin of nationalities which have been previously suggested by professed ethnologists, and to attempt to throw light on them when they are confirmed by philology. In one case only is it sometimes permissible to draw inferences as to race from the facts presented by When we find a small tribe clinging to a dying language, surrounded by a dominant language which has superseded the neighbouring forms of speech, and which is superseding its tongue too, we are generally entitled to assume that the dying language is the original tribal one, and that it gives a clue to the latter's racial affinities. Take as an example the Malto spoken by the hillmen of Rajmahal. This language is decadent, and is surrounded by others which are superseding it. Even if we did not know it on other grounds, we should be justified in asserting that its speakers are Dravidian, because their tongue falls within that family. But even this relaxation of the general rule, which was first suggested to me by Sir Herbert Risley, must, as the case of the Nahals shows, be exercised with caution. The Nahāls are probably Muṇḍā by race, but their present speech is almost Dravidian. Their decadent language is a twofold palimpsest. It first began to be superseded by Dravidian, and now it is being superseded by Aryan. A careless application of Sir Herbert's theory would compel us at the present day to assume that the tribe was of mixed Munda and Dravidian origin. With a dominant language we can make no such relaxation. In India, the Indo-Aryan languages,—the tongues of civilization and of the caste system with all the power and superiority which that system confers upon those who live under its sway,—are continually superseding what may, for shortness, be called the aboriginal languages such as those belonging to the Dravidian, the Munda, and the Tibeto-Burman families. We cannot say that a Tibeto-Burman Köch or a Dravidian Gönd is an Indo-Aryan, because he speaks, as he often does, an Indo-Aryan language. The language of the Brāhūis of Baluchistan is Dravidian, but many of the tribe speak the Eranian Balochi in their own homes, and, on the other side of India, some of the tribe of Khariās speak a Muṇḍā, others a Dravidian language, and others, again, the Indo-Aryan Bengali. It may be added that nowhere do we see the reverse process of a non-Aryan language superseding an Aryan. It is even rare for one Aryan-speaking nationality to abandon its language in favour of another Aryan tongue. We continually find tracts of country on the borderland between two languages, which are inhabited by both communities, living side by side and each speaking its own language. In some localities, such as the District of Malda in Bengal, the Survey actually found villages in which three languages were spoken, and in which the various tribes had evolved a kind of lingua franca to facilitate intercommunication, while each adhered to its own tongue for conversation amongst its fellows. The only exception to this general rule about the non-interchangeability of Indo-Aryan languages

¹ See Vol. IV, pp. 9, 185.

is caused by religion. Islâm has carried Urdū far and wide, and even in Bengal and Orissa we find Musalmān natives of the country whose vernacular is not that of their compatriots but is an attempt (often a bad one) to reproduce the idiom of Delhi and Lucknow.

This brings us to the question of tribal dialects, a subject that has not hitherto received the attention which it deserves. The matter is Tribal dialects. complicated by the fact that very frequently a tribe gives its name to a language, not because it is specially the language of the tribe, but because the tribe is an important one in the area in which it is spoken. Take, for example, the language which in the Census of 1891 was called 'Jatki,' i.e. 'the language of the Jatt tribe.' But Jatki is not by any means the language of the Jatt tribe alone. It is the language of the whole Western Panjab, in parts of which, it is true, Jatts preponderate. The name Jațki is hence misleading (the more so, because the Jatts of the Eastern Panjab do not speak 'Jatki') and has been abandoned in the Survey for the more tenable 'Western Pañjābī' or 'Lahndā'. So again, in the hills north and east of Murree there are a number of dialects varying according to locality. One of the important tribes living in these hills is the Chibh, and these Chibhs everywhere speak the dialect of the different places where they live. But the question-begging name of 'Chibhālī' or 'the language of the Chibhs' was invented, and employed to mean 'the dialect of the hills north and east of Murree,' whereas, there are several dialects spoken by Chibhs, and, moreover, the Chibhs are by no means the only people who speak them.

Another group of tribal tongues are those which are classed in the Survey as Gipsy languages. They are the speeches of wandering clans who employ, mainly for professional purposes, dialects different from that of the tract over which they may possibly have wandered for generations. These tribal tongues may be real languages, or they may be argots in which local words are distorted into a slang like what we find in the 'Latin' patter of London thieves.

Influence of migration on class of tribal dialects in which we find the tongue of a clan which has migrated to some new seat and has gradually developed a new language, based on that of its former home, but corrupted and mixed with that of the people amongst whom its new lot is cast. It is evident that if part of a Rajputana tribe migrates to a country of which Bundeli is the vernacular, while another wends its way to a district in which Marathi is spoken, the resultant languages spoken by the two groups of the same tribe will be very different, although both are based on Rajasthani. Such has actually occurred in several instances in the Central Provinces, and there are also in other parts of India many cases of immigrant tribes which have preserved their original languages in more or less corrupted forms. Perhaps the most striking example is a colony of speakers of corrupt Sindhi, who live in the upper Gangetic Doab.

The identification of the boundaries of a language, or even of a language itself, is not always an easy matter. As a rule, unless they are separated by great ethnic differences, or by some natural obstacle, such as a cange of mountains or a large river, Indian languages gradually

As Sir Aurel Stein has pointed out, defiles in valleys often form more important ethnic and political boundaries than watersheds, when these are crossed by relatively easy passes and routes. This is true also of languages. A mountain range is by no means so impassable to a language, as a difficult river gorge. It is the defiles, not the mountain ranges, that are responsible for the variety of languages in the Pāmīrs. See my Ishkāshmī, Zēbakī, and Yāzghulāmī, p. 4.

merge into each other and are not separated by hard and fast boundary lines. When such boundaries are spoken of, or are shown on a map, they must always be understood as conventional methods of showing definitely a state of things which is in its essence indefinite. It must be remembered that on each side of the conventional line there is a border tract of greater or less extent, the language of which may be classed at will with one or other. Here we often find that two different observers report different conditions as existing in one and the same area, and both may be For instance, in 1911, the then Census placed the north-western frontier of Bengali some twenty or thirty miles to the east of that fixed by the Linguistic Survey and I no more maintain that the Survey figures are right than that the Census figures are wrong. From one point of view both are right, and from another both are wrong. It is a mere question of personal equation. When there is such a debatable ground between two languages, I find from experience that as a rule a speaker of one of these languages classes the speech of the debatable ground as belonging to the other. naturally seizes on the points strange to him, and neglects forms with which he is familiar. For instance, near Bhatnër there is spoken a mixture of Panjabi and Rajasthānī. The Panjābīs sav that it is Rājasthānī, but the Rajputs sav that it is Panjābī. Another example turned up in the preparation of the Survey itself. While I was working at Eastern Hindi Dr. (now Professor) Sten Konow was simultaneously working at Marathi. Each working independently, we finally met at the junction point where the curious mixed dialect called Hal'bi is spoken. From the point of view of Eastern Hindi, I considered that it was a form of Marāṭhī. On the other hand, Dr. Konow, looking at it through Marāthī spectacles, maintained that it was a form of Eastern Hindī. As the last word remained with me, the dialect appeared in the Marathi volume of the Survey, but if it had been put into the volume for Eastern Hindi, I could not have said that it was wrongly placed.

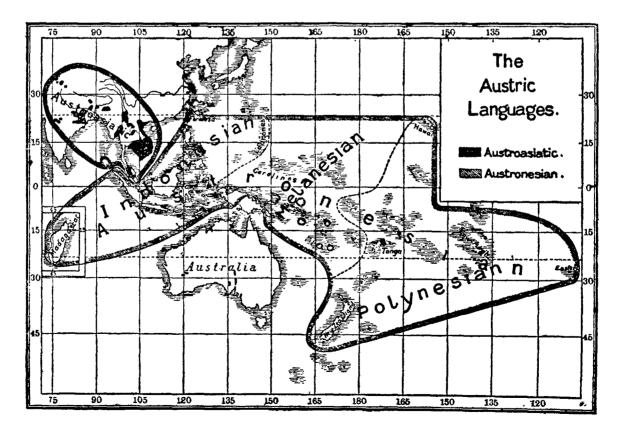

In the following account of the results of the Survey, I shall, for the sake Area to which the following of completeness, refer also briefly to languages of India that remarks apply. have not fallen within its scope. These are mainly the languages of Burma and of the Deccan. Of the former, a separate Survey is now in progress, and it is far from my purpose to attempt to indicate its But the languages of Burma are intimately linked with those of Tibet and North-Eastern India, and it would be manifestly improper to leave them altogether out of consideration. The speeches of the Deccan are Dravidian and, similarly, they have congeners in northern India, and demand more than a passing reference. I shall deal first with the languages of the Austric family, as they are probably the earliest forms of speech that have survived to the present day. Then I shall deal with those that came probably later into the country, -the Dravidian and the Indo-Chinese, -and finally with the tongues of Aryan origin, concerning the entry of which into India we can speak with some certainty.

CHAPTER II.—THE AUSTRIC FAMILY.

In the year 1906 there appeared in Brunswick a little book by Pater W. Schmidt entitled 'Die Mon-Khmer-Völker, ein Bindeglied zwischen Völkern Zentralasiens und Austronesiens' which at once attracted the attention of students of language and of ethnology. The author's researches into the languages known as Mōn, Khmēr, and Khāsī had already established his reputation as a skilled and, at the same time, as a sober philologist, and in this work new and far-reaching views, based on solid and wide learning, were enunciated. These views up to the present time have not been seriously challenged.

Pater Schmidt here proved the existence of a great family of languages hitherto not recognized, which, although the languages composing it are spoken by a comparatively small number of people, is spread over an area wider than that occupied by any other group of tongues. Its speakers are found scattered over Nearer and Further India, and form the native population of Indonesia, Melanesia, and Polynesia, including Madagascar and New Zealand. It extends from Madagascar, off the coast of Africa, to Easter Island which is less than forty degrees from the coast of South America. In the North, traces of it were discovered in Kanāwar in the Panjāb, and its southern limit included New Zealand. West of Easter Island it covers the whole Pacific Ocean, except Australia (including Tasmania) and a part of New Guinea.

This 'Austric Family,' as he named it, he divided into two sub-families, the 'Austro-Nesian' and the 'Austro-Asiatic.' The former included the languages of Madagascar, Indonesia, and the islands of the Pacific, while the latter included languages scattered over Nearer and Further India. The annexed map, based on that in Pater Schmidt's work, shows their respective localities.

Austro Nesian. Salôn. Number of speakers in 1921.

TOTAL

The only Austro-Nesian languages politically connected with India are Salôn, spoken by a tribe of sea-gipsies inhabiting the islands of the Mergui Archipelago and the adjacent parts of the Malay Peninsula and Malay spoken in the same locality. These languages consequently did not fall within the sphere of operations of the Survey, but on the margin will be found the number of speakers recorded in the Census of 1921.

The Austro-Asiatic sub-family is much more strongly represented in India. There is first the great Mon-Khmer Branch spoken in Further India, Austro-Asiatic. of which we have three representatives in Burma, in the shape

of Mon, an ancient literary language now spoken in Thaton and Amherst, and Palaung Austro-Asiatic languages.

and Wa, less civilized languages spoken in Upper Burma. Khmer and a number of other minor forms of speech belong to Indo-China, beyond the Burma frontier. Among the latter, mention may be made of two languages spoken by wild tribes of Malacca,

the Sakei and the Semang. Like Khmer these are spoken outside the limits of British India. Nicobarese also belongs to this branch, and seems to form a connecting link between the Munda languages and Mon.

None of the above languages fell within the operations of the Survey, but going north we come to Khāsī, a Mon-Khmēr language spoken in Khāsī. the Khasi and Jaintia Hills of Assam. This was fully dealt with in the Survey. Its standard dialect has been often described, and moreover possesses a small literature with which it has been endowed by the local missionaries. Khāsī is more or less isolated alike from its cousins of Burma and from those of India, and has struck out on somewhat independent lines apart from Mon, Nicobarese, and Munda, which are mutually more closely connected than any of them is with Khāsī. three dialects of Lyng-ngam, Synteng, and War, in addition to the standard form of

speech, Khāsī forms an island of Mon-Khmēr speech, left untouched in the midst of an ocean of Tibeto-Burman languages. Logan was the first to suggest, and Kuhn subsequently showed conclusively, that it and the Mon languages belong to a common stock.

Ŧ

The resemblances in the vocabularies of Khāsī and of the dialects of the Palaung-Wa group settle the question. But the resemblance is not only one of vocabulary. construction of the Mon and of the Khāsī sentence is the same. component parts are put in the same order, and the order of thought of the speakers is thus shown to be the same. Like Mon and other members of the branch, and unlike the other Indo-Chinese languages by which it is surrounded, Khāsī has no tones. On the other

¹ In Volume II, page 7 of the Survey, I have stated that Khasi, there spelt 'Khassi' possesses tones, but this was a mistake due to the fact that at the time we possessed no satisfactory definition of what a tone is. Many words in Khāsī do end in a glottal check, and such a glottal check is called 'the abrupt tone' or 'the entering tone' in other Indo-Chinese languages. But this glottal check is, properly, not a tone at all. The word 'tone' should be confined to indicating the pitch or the change of pitch of the voice, and has no reference to the abruptness or otherwise with which a word is uttered. All the Austro-Asiatic languages, including Khāsī, employ this glottal check, but it is a distinguishing characteristic of all of them that none employs the true tones which indicate the meaning of a word by pitch or change of pitch. See J. R. A. 8 1920, page 459.

hand, it differs from the other Mōn-Khmēr languages in possessing the so-called articles, which are wanting in other members of the branch, and in having grammatical gender. Here we must leave the matter in the hands of the ethnologists. It will be interesting to see if any connexion of tribal customs can be traced, and if the Mōns or Palaungs still retain survivals of the matriarchal state of society which is so characteristic of the Khāsīs. The Palaungs, at any rate, trace their origin to a princess, and not to a prince.

Leaving Assam we pass to Central India, where we find the Muṇḍā languages

occupying a strong position. The principal of these, Khērwārī, with numerous dialects, has its head-quarters at the north-eastern end of the plateau of Central India, but has spread into, or left survivors in, the plains at its foot. It has many dialects, of which the best known are Santālī and Muṇḍārī. At the other, the north-west, end of the plateau, in the western Districts of the Central Provinces and in Mewar, we find another Muṇḍā language, Kūrkū,¹ which is said to have two dialects,—Muwāsī and Nahālī, but,

as stated above (p. 28), the latter is much mixed with other forms of speech and is on the verge of disappearing altogether. The other Munda languages are less important. They are spoken in the neighbourhood of Khērwārī or to its South. The principal are Kharia, Juang, Savara, and Gadaba, and they are all more or less mixed forms of speech. Khariā is mostly spoken in the Ranchi District of Chota Nagpur, and has all the characteristics of a language that is dying out and is being superseded by an Aryan form of speech. Aryan principles pervade its grammatical structure and its vocabulary, and it is no longer a typical Muṇḍā language. It has been compared to a palimpsest, the original writing on which can only with difficulty be recognized. Juang is very similar. It is spoken by the Juangs or Patuas of the States of Keonjhar and Dhenkanal in Orissa. These people are probably the lowest in the scale of civilization of all the Munda tribes. Till quite recently the women of the tribe did not even sew fig-leaves together to make themselves aprons. A bunch of leaves tied on in front and another behind was all that was claimed by the most exacting demands of fashion, and this costume was 'renewed as occasion required, when the fair wearer went to fetch cattle from the wood which provided her millinery.' Attempts have been made to introduce the wearing of loin-cloths, but 1 know not with what success. The most southern forms of Munda speech are those spoken by the Savaras and the Gadabās of North-East Madras. The former have been identified with the Suari of Pliny and the Sabarae of Ptolemy. A wild tribe of the same name is mentioned in Sanskrit literature, even so far back as late Vedic times, as inhabiting the Deccan, so that the name, at least, can boast of great antiquity. Their language is of considerable interest, and since it was discussed in Volume IV of the Survey a series of excellent Readers in it have been prepared by Mr. Ramamurti for the Madras

¹ The home of its speakers is in the west of the Pachmarhi Hills and in the Betul District of the Central Provinces. The Berar Kūrkūs are mostly found in the Meighat Taluk of Ellichpur, which is geographically a part of Betul.

·		

Government. Unfortunately, as the explanations are all in Telugu, they are of little use to European students.

The languages of the Munda Branch must once have been spoken over a much greater area of India than their present habitat. In the Traces of Munda languages South, and to a certain extent in Chota Nagpur, they have outside their present area. been superseded by Dravidian forms of speech, and in the North by Aryan or Tibeto-Burman tongues. In each case, however, they have left their mark. As for the Dravidian languages, it is very probable that the rules for the harmonic sequence of vowels, which form so prominent a feature of Telugu are due to their influence, and, to the North of Chota Nagpur, the extraordinary complexity of the verbal conjugation of the Aryan Bihārī is equally probably due to the same cause.2 Another interesting point is that Munda numeration is vigesimal. The speakers count by twenties, not by tens as we and other Europeans do. But among the peasantry of Northern India vigesimal counting is quite usual. Instead of saying 'fifty,' they say 'two score and ten,' instead of 'sixty' they say 'three score,' and so on. This might be a case of mere coincidence, but that it is really an old Munda survival is shown by the fact that kupi, the word used all over Northern India for 'a score', is almost certainly a word of Mundi origin. But it is in the Himalaya that these Munda survivals are most apparent. At the present day, the Mundas have themselves survived as a recognized people only in the wild hill-country of Central India, and it is in accordance with this that they should also have survived for a longer time in the forests of the Himalaya than on the Aryanized plains of Northern India. In the Himalaya, from North-East Assam to the North-East Panjab, the great mass of the inhabitants speaks various forms of Tibeto-Burman tongues. Most of these are quite pure of their kind and possess all the peculiarities proper to that form of speech. But between Darjiling, north of Bengal, and Kanawar, north of Simla in the Panjab, there is a series of scattered tribes speaking languages called in the Survey 'Complex Pronominalized.' Most of them belong to the group called by Hodgson 'Kiranti', but there are also others not mentioned by him. These languages are all Tibeto-Burman, or belong to some group closely allied to the Tibeto-Burman, but through them all there runs a peculiar strain which it is impossible not to recognize as Munda, once attention is drawn to it.3 These Complex Pronominalized languages are many in number, and will be further dealt with when we come to the consideration of the Tibeto-Burman languages. Suffice it here to say that the most western is probably Kanāwarī, spoken in the Simla Hills, though there are doubtful cases even further west.

The Muṇḍā languages were first recognized as a separate group, distinct from the Dravidian, in the year 1854 by the late Professor Max Müller in his famous 'Letter to Chevalier Bunsen on the Classification of the Turanian Languages,' and received its name 'Muṇḍā' from him'. As stated on page 14, in the comity of scholarship it has ever been an established rule that the first discoverer of any fact, whether it be a newly described flower, a newly

¹See Vel. IV, p. 288.

² Ib., p. 10.

³ See Vol. III, Pt. i, pp. 273ff., 427ff.

^{*}This name is justified by its use in Sanskit literature. The name 'Munda' is found used for the people not only in the Mahābhārata (vi. 2410) but also in the Vāyo Purāna xiv. 123. See Professor Sylvain Lévi's article 'Pré-Aryen et Pré-Dravi dien' in Journal Asiatique, ceiii, 22ff. See also 1 14, note.

described mineral, or a newly described group of languages, should have the right to give it its name, and that that name should be employed by other students unless and until it has been proved to be entirely false and misleading. Unfortunately this comity was not observed in the present case. Twelve years later, Sir George Campbell, no doubt unwittingly, ignored the name already given by Max Müller, and proposed to call these languages 'Kolarian' because, as he imagined, the word 'Kōl,'— a common tribal name of the Mundā people,—was derived from an older form 'Kolar,' which he apparently connected with the Kolar District of Mysore in Southern India, and looked upon as identical with the Kanarese word kallar meaning 'thief.' There is absolutely no foundation for this supposition, and this name 'Kolarian' is not only based upon a fantastic error, but is, in itself, objectionable as seeming to suggest a connexion with the word 'Aryan' which does not exist.

It is admitted that, with our present knowledge, it might be possible to suggest a better name than that given by Max Müller, and more than one such have been suggested; but, so far as India was concerned, only two names were possible. Sir George Campbell's authority brought 'Kolarian' into a certain vogue during the latter half of the last century; but the word was so manifestly incorrect and misleading that I have had no hesitation in refusing to employ it, and in using the only name which students, in the ordinary comity of scholarship, should follow, by reverting to the name originally given by the discoverer of the group.

The Muṇḍā languages belong to the class known as 'agglutinative,' and exhibit the General character of the typical peculiarities of such forms of speech to an extra-Muṇḍā languages. The only tongue with which I can compare them is Turkī. I have already referred to Max Müller as the first identifier of this group of tongues. Let me here quote what he says about the Turkī language of Central Asia:—

It is a real pleasure to read a Turkish grammar, even though one may have no use to acquire it practically. The ingenious ways in which the numerous grammatical forms are brought out, the regularity which pervades the system of declension and conjugation, the transparency and intelligibility of the whole structure, must strike all who have a sense of that wonderful power of the human mind which has displayed itself in language........... We have before us a language of perfectly transparent structure, and a grammar the inner workings of which we can study as if watching the building of cells in a crystal beehive. An eminent orientalist remarked, We might imagine Turkish to be the result of the deliberations of some eminent society of learned men'; but no such society could have devised what the mind of man produced, left to itself in the steppes of Tartary, and guided only by its innate laws, or by an instinctive power as wonderful as any within the realms of nature..... The most ingenious part of Turkish is undoubtedly the verb. Like Greek and Sanskrit, it exhibits a variety of moods and tenses, sufficient to express the nicest shades of doubt, of surmise, of hope, and of supposition. In all these forms the root remains intact, and sounds like the keynote through all the modulations produced by the changes of person, number, mood, and time. But there is one feature so peculiar to the Turkish verb that no analogy can be found in any of the Aryan languages, the power of providing new verbal bases by the mere addition of certain letters, which give to every verb a negative. or causative, or reflexive, or reciprocal meaning......... In their system of conjugation, the Turkish dialects can hardly be surpassed. Their verbs are like branches which break down under the heavy burden of fruits and blosoms.

Nearly every word of the above applies with equal force to the Munda languages.

Agglutination in the Munda Suffix is piled on suffix, till we obtain words which, to European eyes, seem monstrous in their length, yet which

¹ The Ethnology of India, J. A. S. B., vol. xxxv (1866), Pt. ii, Supplementary Number, p. 28.

^{2 &#}x27;Lectures on the Science of Language', I, 354ff.

are complete in themselves, and every syllable of which contributes its fixed quota to the general signification of the whole. One example of the use of these suffixes, taken from Santālī, must suffice. The word dal means 'strike,' and from it we get dal-ocho-akantahen-tae-tiñ-a-e, which signifies 'he, who belongs to him who belongs to me, will continue letting himself be struck.' If we insert the syllable pa in the middle of the root, so that we get dapal, the beating becomes reciprocal, and we have a fight, so that dapal-ocho-akan-tahen-tae-tiñ-a-e means 'he, who belongs to him who belongs to me, will continue letting himself be caused to fight.' Again, if we substitute akao-an for akan, the same pugnacious individual with a string of owners will, with less disinterestedness, continue causing to fight only for himself. Not only may we, but we must employ this posy of speech, if, for instance, my slave's son was too often getting himself entangled in affrays. The best idea of the enormous number of complex ideas which can thus be formed according to the simplest rules may be gained from the fact that the conjugation of the verb 'to strike,' in the third person singular alone, occupies nearly a hundred pages in Mr. Skrefsrud's Santālī Grammar.

Among other characteristics of the Munda languages we may mention the following. As in the Indo-Chinese languages, final consonants are often checked, or pronounced without the offglide, thus forming what is often called by Chinese scholars the 'abrupt' or 'entering tone.' Such consonants are as characteristic of Cantonese as they are of Muṇḍā, and are common, so far as I am aware in all the languages of the Mon-Khmēr branch of Austro-Asiatic speech. Although masculine and feminine nouns are distinguished, there are only two real genders, one for all animate and the other for all inanimate objects. Nouns have three numbers, a singular, a dual, and a plural, the dual and plural numbers being indicated by suffixing the dual or plural, respectively, of the third personal pronoun to the noun. Short forms of all the personal pronouns are freely used, in each case as verbal suffixes. The dual and plural of the first personal pronoun have each two forms, one including the person addressed, and the other excluding him. If, when giving orders to your cook, you say, 'we shall dine at half past seven', you must be careful to use ale for 'we,' not abou; or else you will invite your servant also to the meal, which might give rise to awkwardness. As in many other eastern languages, participial formations are used instead of relative pronouns. 'The deer which you bought yesterday' would be rendered 'the yesterday deer bought by you.' are modified in meaning not only by suffixes, but also by infixes, as in du-pa-l mentioned above. The logical form of a Munda sentence is altogether different from that of Aryan languages, and hence it is impossible to divide it into the parts of speech with which we are familiar, say, in English. The nearest thing that it has to what we call a verb merely calls up an idea, but is unable to make any assertion. The final assertion is made by one of the most characteristic features of Munda grammar, a particle known as 'the categorical a.' By its form, the sentence first unites the represented ideas into a mental picture, and then, by a further effort, affirms its reality. In English we say "John A Santāli would first call up a picture of John having come, and then, by adding the categorical a, would assert that this picture was a fact. Hence this a is not used in sentences that do not contain a categorical assertion, e.g. those which in English

¹See Dyer Ball, 'Cantonese Made Easy Vocabulary', 3rd Edition, Preface. As stated above (p. 33, Note ¹) although called the 'entering tone' is, pro Zrly speaking, not a tone at all.

would contain a verb in the subjunctive or optative mood. Munda, with what is really better logic, relegates subjunctive and relative to what may be called the incomplete verb in company with what are with us participles, gerunds, and infinitives, and forms the only complete and real verb by the addition of the categorical a.

As in the case of several other uncivilized or semi-civilized tribes, the names which Names of Muṇḍā languages.

we give to many Muṇḍā tribes are not those by which their members call themselves, but those which we have adopted from their Aryan-speaking neighbours. Most of the tribes simply call themselves 'men', the same word with dialectic variations, Kōl, Kōṛā, Kūr-kū (merely the plural of Kūr), Hâṛ, Hâṛâ-kō (another plural), or Hō, being used nearly universally. The Indian Aryans have adopted in one case the word 'Kōl' as a sort of generic term for any of these non-Aryan tribes, and have identified the word with a similarly spelt Sanskrit term signifying 'pig,' a piece of etymology which, though hardly in accordance with the ideas of European science, is infinitely comforting to those that apply it. The Rāj of these Kōls is a subject of legend over large tracts of the south side of the Gangetic valley, where not one sentence of Muṇḍā origin has been heard for generations. The name is perhaps at the bottom of our word 'coolie,' and of the names of one or more important castes which would indignantly deny their Muṇḍā origin.

CHAPTER III.—KAREN AND MAN.

Before describing the languages belonging to the Tibeto-Chinese languages, we must refer briefly to two other groups of languages the affiliation of which is doubtful, and which, pending the completion of the Linguistic Survey of Burma have been provisionally put down as independent families. These are the Karen Family and the Man Family. Neither is described in the pages of the present Survey.

The Karen Family.

Karen is a group of dialects spoken by members of the Karen tribe scattered over

South Burma and the neighbouring parts of Siam. According to the late Professor Terrien de Lacouperie, they are pre-Chinese, and in that case may be connected with the 'Man' languages to be presently described, with which I have myself noted more than one resemblance. It is possible also that they may be distant relations of the Kirāntī languages spoken in the Himalaya, but here the case must be left for further investigation by the Linguistic Survey of Burma. Where so much doubt exists, it is hardly necessary to state that the Karens have been identified by some with the lost Ten Tribes, and it is not actually impossible that they may have gathered some of their traditions from early Jewish colonists in Northern China. From Northern China they appear to have migrated to the neighbourhood of Ava, whence, about the fifth or sixth century of our era, they came down southward and spread over the hills between the Irrawaddy, the Salwin, and the Mè-nām

as far as the seaboard. I must leave to the Linguistic Survey of Burma the task of describing the various forms of Karen. They are many in number. Here it must be sufficient to state that the most important forms are Karenni, or Red Karen, of the north, Pwo and Sgaw of the south, and Taungthu.

The Man Family.

The languages which have been provisionally classed under the name of 'Man' are mainly spoken in China and Indo-China, although a few speakers are found in British Burma. The name 'Man' is Chinese and means a 'Southern Barbarian.' It is applied by the Chinese to certain wild tribes inhabiting the mountainous tracts of Indo-China and that part of China bordering on it. Representatives of two of these tribes,—the Miao and the Yao have turned up in the Southern Shan States and their languages have

been recorded in the Census of 1921. These languages hardly concern India, but will no doubt be dealt with in the Linguistic Survey of Burma. Fuller information regarding them will be found in the Introduction to the Comparative Vocabulary forming Part II of this Volume.

The locality in which Karen is spoken is shown in the man fleing page 50.

CHAPTER IV.—THE TIBETO-CHINESE FAMILY.

The Tibeto-Chinese Family.

of the Eastern Hemisphere from Central Asia to Southern Burma, and from Baltistan to Pekin—as that formless, ever moving, ant-horde of dialects, the Tibeto-Chinese. The number of its speakers far exceeds those of the Austric, and even of the Indo-European family. So vast is the area covered by it, and so apparently infinite is the number of its members, that no single scholar can hope to master the latter in their entirety. A few of them, such as Tibetan, Burmese, Siamese, or Chinese, have been more or less thoroughly investigated by specialists; of others we have only a few words, single bricks, each of which we have to take as specimens of an entire house; while of others, again, we know only the names, or not even that.

The first attempts at classifying this mass of languages were made by Brian Houghton Hodgson, clarum et venerabile nomen, and his Their Classification. works still form the foundation of all similar undertakings. Closely following Hodgson came the enthusiastic and indefatigable Logan, to whom we are indebted for much that relates to Burma and Assam. After him we find several writers, some like Mason, Cushing, Forbes, or Edkins, armed with a practical mastery of a portion of the field, and adding new facts to our knowledge, and others, trained philologists like Max Müller, Friedrich Müller, or Terrien de Lacouperie, who examined the materials collected by the former, and did something towards reducing chaos into order. Since then considerable progress has been made, and, if we confine ourselves to our immediate subject, the languages of India and the countries of the immediate neighbourhood, it will be sufficient to record the work done by the late Professor Kuhn of Munich, Professor Conrady, formerly of Leipzig, Dr. Laufer and Professor Bradley in America, and, above all, the brilliant band of scholars which adorns L'Ecole Française d'Extrême-Orient at Hanoi under the leadership of Monsieur Finot. Through their labours a framework of classification has been put together which is generally accepted by scholars who are in a position to judge its value. They have even succeeded in formulating phonetic rules that bridge over the differences between what are apparently the most widely separated languages, and in suggesting theories to account for the origin of the tones which are so characteristic of these forms of speech. In this way the ground has been prepared for the Linguistic Survey of Burma, which will, I hope, be well advanced before these words are in type.

If there is one principle that is universally accepted in comparative philology, it is that languages must be classed according to their grammars. Vocabulary alone is but an untrustworthy guide. If we judge by vocabulary, the Latinized English of Dr. Johnson would have to be recorded as a Romance language, and Urdū as Semitic or Eranian, whereas every one knows that English is really Teutonic and Urdū Indo-Aryan. The rule applies admirably to languages like Sanskrit or Latin or English, which have grammars, but what are we to do when we come to languages which to our Aryan ideas have no grammar at all—forms of speech which make no distinction between noun, adjective, and verb, which have no inflexions, or hardly any, and which are entirely composed of monosyllables that never change their forms? According to the 'Century Dictionary', grammar is 'a systematic

ĸ

account of the usages of a language, as regards especially the parts of speech it distinguishes, the forms and uses of inflected words, and the combinations of words into Hence, to answer the above question, we must either abandon our principle or enlarge our conception of grammar by omitting the word 'inflected' from the definition. We are thus thrown back on the forms and uses of words generally; that is to say, we are compelled to lay more stress upon a comparison of vocabularies, and, as will be seen subsequently, this will really bring us back to our principle. Tibeto-Chinese languages, like the Buddhists who speak most of them, have passed through many births. The latest investigations have shown that in former too, are under the sway of karma. existences they were inflected, with all the familiar panoply of prefix and suffix, and that these long dead accretions are still influencing each word in their vocabularies in its form, its pronunciation, and even the position which it now occupies in a sentence. history of a Tibeto-Chinese word may be compared to the fate of a number of exactly similar stones which a man threw into the sea at various places along the shore. One fell into a calm pool, and remained unchanged; another received a coating of mud; which, in the course of centuries, itself became a hard outer covering entirely concealing what was within; another fell among rocks in a stormy channel, and was knocked about and chipped and worn away by continual attrition till only a geologist could identify it; another was burrowed into by the pholas till it became a caricature of its former self; another was overgrown by limpets, and then was so worn away and ill-treated by the rude waves that, like the grin of Alice's Cheshire cat, all that remained was the merest trace clinging to the shell of its whilom guest. Laborious and patient analysis has enabled scholars to trace the fate of some vocables through all their different vicissitudes. For instance, no two words can apparently be so different as rang and ma, both of which mean 'horse,' and yet Professor Conrady has traced the derivation of the latter from the former, although all that has remained of the original rang in the Chinese ma is the tone of voice in which the latter is pronounced!

Tradition and comparative philology agree in pointing to North-Western China between the upper courses of the Yang-tse and of the Original home. Hoang-ho as the original home of the Tibeto-Chinese race.¹ Further India and Assam have been populated by successive waves of Tibeto-Chinese invaders, each advancing in turn down the courses of one or more of the principal streams, the Brahmaputra, the Chindwin, the Irrawaddy, the Salwin, the Mé-nām, and the Mé-khong, and driving its predecessors nearer to the sea-coast, or into the mountain fastnesses which overlook the valleys. Philology, moreover, teaches us that the earliest Tibeto-Chinese immigrants must have found other races settled there. Amongst these were certainly the Mon-Khmers, and possibly also the ancestors of the Karens and of those wild tribes of Indo-China, whose languages are grouped together in these pages under the title of 'Man.' The Mon-Khmers have already been dealt with. The Karens and the Mans do not fall within the limits of this Survey, but will certainly be discussed at length in the Linguistic Survey of Burma now under consideration. They have, however, been briefly alluded to, for the sake of completeness in the preceding pages.

The Tibeto-Chinese family of languages is conveniently divided into two sub-families,—the Tibeto-Burman and the Siamese-Chinese.

Neither of these is fully represented in this Survey. Nearly

¹ See E. Kuhn, 'Ueber Herkunft und Sprache der transgangetischen Völker', pp. 4 and 8. VOL. I, PARF I.

		Survey.	Census of 1921.

all the speakers of the latter, so far as they are included in the Indian census returns, belong to Further India, only a few minor dialects being found in Assam, where they fell into the Survey net. As for the Tibeto-

Burman languages, this Survey accounts for only about a fifth of the whole, the great majority of the speakers of these languages being inhabitants of Burma.

The Tibeto-Burmans

Two main Branches.

Tibeto-Himalayan Branch.

Assam-Burmese Branch.

The Tibeto-Burmans appear to have first migrated from their original seat on the upper courses of the Yang-tse and Hoang-ho towards the head-waters of the Irrawaddy and of the Chi.dwin. Thence, it is believed that some followed the upper course of the Brahmaputra, the Sanpo, north of the Himalaya, and peopled Tibet. Λ few of these crossed the watershed and occupied the hills on the southern side of the Himalayan range right along from Assam, in the East, to the Panjab in the West. At the Assam end, they met and mingled with others of the same family who had wandered along the lower Brahmaputra through

the Assam Valley. At the great bend of the river, near the present town of Dhubri. these last followed it to the South, and occupied first the Garo Hills, and then what is now the State of Hill Tippera. Others of them appear to have ascended the valley of the Kapili and the neighbouring streams into the hill-country of North Cachar, but the mountainous tract between it and the Garo Hills, now known as the Khasi and Jaintia Hills, they failed to occupy, and it still remains a home of the ancient Mon-Khmer speech. Other members of this Tibeto-Burman horde halted at the head of the Assam Valley and turned south. They took possession of the Naga Hills, and became the ancestors of that confused sample-bag of tribes, whose speeches we call for convenience the Naga group. Some of these probably entered the eastern Naga country directly, but others entered the western Naga country from the South, viá Manipur, and there are signs of this northern movement going on even at the present day. Other members remained round the upper waters of the Irrawaddy and the Chindwin, where Kachin is now spoken, and there formed the nursery for further emigrations. We have apparently traces of the earlier movements in dialects of servile tribes,—the so-called 'Lūi' languages—of Manipur, and in stray dialects, such as Kadu, Szi, Lashi, Maingtha, Phón (Hpón), or Maru, scattered over northern Burma. Later, but still early, settlers in Manipur must have been the Manipuris, for their language, Meithei, shows not only points of agreement with that spoken at the present day in its original home in what is now the Kachin country, but also with those of all the other emigrants from that tract. Another of these swarms settled in the upper basins of the Chindwin and the Irrawaddy, and gradually advanced down the courses of those streams. driving before themselves, or absorbing, or leaving untouched in the highlands, their predecessors, the Mon-Khmers. Before their language had time to change materially from the form of speech spoken in the home they had left, branches of these turned westwards and settled in the Chin Hills, south of Manipur. There they increased and multiplied, till, driven by the pressure of population, they retraced their

Another possible view is that these Chin tribes branched off, not from the Burmese invaders, but from the Meitheis who had settled in the Manipur Valley. Linguistic evidence, however, points to the account given above as the most probable statement of facts.

43

steps northward in wave after wave along the hills, leaving colonies in Lushai-land, Cachar, and even amongst their cousins of Manipur and their more distant relations of the Naga Hills. Their descendants speak some thirty languages, all different, yet all closely connected, and classed together with Meithei as forming the Kuki-Chin group. Another of these waves entered Yün-nan. They do not immediately concern us, but they are of more than ordinary interest, in that a very ancient form of this speech, known as Si-hia, now many centuries dead, has been preserved for us by a Chiuese philologist. The particulars given by him have been made available to European students by Dr. Laufer in 'T'oung-pao.' Si-hia was spoken on the North-West frontier of China, and is the only ancient Tibeto-Burman language with which we are acquainted. The modern representatives of this swarm are the Lolos, most of whom are found in Yün-nan, though a few stray tribes speaking Lolo dialects can be found in eastern Burma. The main branch of the Chindwin-Irrawaddy swarm, the ancestors of the nodern Burmese, continued to follow its line of march along the rivers, till it ultimately occupied the whole of the lower country, and founded the capitals of Pagan and Prome. Finally, in quite modern times, another migration of the Kachins has pressed towards the south, and their progress has been stopped only by our occupation of Upper Burma. there is complete historical evidence for all that precedes cannot be pretended. Much of it deals with prehistoric times. All that I have endeavoured to present has been the opinions which I have based on a comparison of local traditions with the facts ascertained by ethnology and philology. It must be confessed that some of the steps have been taken with hesitation and upon doubtful ground.

We are treading on firmer soil when we approach the next great invasion,—that of the speakers of the Siamese-Chinese languages. These are represented in British India by one group,—the Tai. Chinese also belongs to the same sub-family, but does not concern us. Some authorities include Karen in this sub-family, but the affiliation is at present very doubtful, and as explained above,² pending the completion of the Linguistic Survey of Burma, I followed the Census of 1921 in classing Karen provisionally as belonging to a separate family.

The Tais first appeared in history in Yün-nan, and from thence they migrated into Upper Burma. The earliest swarms appear to have entered that tract about two thousand years ago, and were small in number. Later and more important invasions were undoubtedly due to the pressure of the Chinese. A great wave of Tai migration descended in the sixth century of our era from the mountains of southern Yün-nan into the valley of the Shweli and the adjacent regions, and through it that valley became the centre of their political power. Early in the thirteenth century their capital was fixed at the present Müng Mau. From the Shweli the Tai or Shām, or (as the Burmese call them) Shàn, spread south-east over the present Shan States, north into the present Khāmtī region, and, west of the Irrawaddy, into all the country lying between it, the Chindwin, and Assam. In the thirteenth century one of their tribes, the Āhoms, overran and conquered Assam itself, giving their name to the country. Not only does tradition assert that these Shàns of Upper Burma are the oldest members of the Tai

^{1 2}nd Series, Vol. xvii, No. 1, March, 1915.

¹ P. 39.

family, but they are always spoken of by the other branches as the *Tai Long*, or Great Tai, while these others call themselves *Tai Noi*, or Little Tai.

These earliest settlers and other parties from Yün-nan gradually pressed southwards, driving before them, as we shall see was also done by the Tibeto-Burmans in the valley of the Irrawaddy, the Môn-Khmêrs, but the process was a slow one. It was not until the fourteenth century of our era that the Siamese, or, as they call themselves, Thai, established themselves in the great delta of the Mé-nām, and formed a wedge of Tai-speaking people between the Môn-Khmêrs of Tenasserim and those of Cambodia. The word 'Siam,' like 'Assam,' is but a corruption of 'Shâm.'

The Shans of Burma were not so fortunate. Their power reached its zenith in the closing years of the thirteenth century, and thereafter gradually declined. The Siamese and Lao dependencies became a separate kingdom under the suzerainty of Ayuthia, the old capital of Siam. Wars with the Burmese kings and with the Chinese were frequent, and the invasions of the latter caused great loss. The last of the Shan States, Mogaung, was conquered by the Burmese king Alomphra in the middle of the eighteenth century, but by the commencement of the seventeenth century Shan history had already merged into that of Burma, and the Shan principalities, though they were always restive and given to frequent rebellions and to intestine wars, never succeeded in throwing off the yoke of the Burmans.

To sum up the history of the Inde-Chinese languages, so far as it relates to British Summary of the history of India. The earliest inhabitants of whom we have any trace the Indo-Chinese languages. seem to have been the pre-Chinese ancestors of the wild 'Man' tribes now found in French Indo-China and in China proper, with whom it is possible that the Karens of Burma may claim a distant relationship. From Indo-Nesia, in the South, came the Mon-Khmers, who occupied a large part of Further India, Subsequent invasions of Tibeto-Burmans have thrust them back, including Assam. down to the seaboard, leaving a few waifs and strays in the highlands of their old homes. Of the Tibeto-Burman stock, one branch entered Tibet, some of whose descendants crossed the Himalaya, and settled on the southern slopes of that range. Others followed the course of the Brahmaputra, and even occupied the Garo Hills and Tippera. Others found homes in the Naga Hills, in the valley of Manipur, and the upper waters of the Chindwin and the Irrawaddy. From the last-named region swarm after swarm took a southern course. E_n route colonies were dropped in the Chin Hills, whence again a backwash has appeared in modern times in Lushai-land, Cachar and the neighbourhood. The rest of the swarms gradually forced their way down the valley of the Irrawaddy, where they settled and founded a comparatively stable kingdom. Finally another group of Tibeto-Chinese peoples, the Tai, conquered the mountainous country to the East of Upper Burma, and spread north and west among, but not conquering, the Tibeto-Burman Kachins of the upper country. They also spread south and occupied the Mon-Khmer country between them and the sea, and their most important members now occupy a strip of territory running north and south, with Burmese and, lower down, Mon speakers on their west, and Chinese and Annamese on their east. Annamese itself appears to have been originally a Tai language, but it is now so mixed with Mon-Khmer and Chinese that its correct affiliation is a matter of some doubt.

Tibeto-Chinese languages exhibit two of the three well-known divisions of human General characteristics of speech, the isolating, the agglutinating, and the inflecting. From this list it is not to be assumed that an isolating language is necessarily in the earliest stage of its development. All Tibeto-Chinese languages were once agglutinative, but some of them, Chinese

for instance, are now isolating; that is to say, the old prefixes and suffixes have been worn away and have lost their significance; every word, whether it once had prefix or suffix, or both, or not, is now a monosyllable; and, if it is desired to modify it in respect to time, place, or other relation, this is not done by again adding a new prefix or a new suffix, but by compounding with it, i.e., simply adding to it, some new word which has a meaning of its own, and is not incorporated with the main word in any way. For example, the Chinese word indicating the idea of 'going' is $\lambda k'\ddot{u}$, and that indicating the idea of completion is $\lambda lyao$, and if a Chinaman wishes to convey the idea of 'he went,' he says 'he going completion,' $\neg t'\ddot{a} \wedge k'\ddot{u} \wedge lyao$. Even in Chinese, some of these subsidiary words which modify the meaning of the principal one have lost their significance as separate vocables, and only continue in existence as prefixes or suffixes. This brings us to the agglutinating stage of language, in which sentences are built up of words united to formal parts, prefixes, suffixes, or infixes, which denote the relationship of each to the other members of the phrase-

Agglutinating languages. The differences, in kind and degree, between the various agglutinating languages are very great; the variety ranges from a scantiness hardly superior to Chinese isolation, up to an intricacy which is almost incredible.

We may take the Tai languages as examples of forms of speech in which the agglutinative principle is showing signs of superseding the isolating, while in the Tibeto-Burman family it has practically done so, and but few of the affixes are capable of being used as words with independent meanings. They are agglutinative languages almost

in the full sense of the term. There is one more stage which we meet but rarely, and even then in sporadic instances, in Tibeto-Chinese languages. In it the words used as affixes have not only lost their original meaning, but have become so incorporated with the main word which they serve to modify, that they have become one word with it, and the two are no longer capable of identification as separate words except by a process of analysis. Moreover, the root word itself becomes liable to alteration. This stage is known as the inflexional, and Sanskrit and the other Indo-European languages offer familiar examples of it.

Before proceeding further, it will be useful to quote the following general observations of abstract and tions which were made by the late Professor Friedrich Müller concrete ideas.

of Vienna in his great work on comparative philology:—

The manner in which primitive conceptions are formed is of the greatest importance in influencing the further development of a language as a medium for expressing human thought. Things may be conceived in their concrete entirety, or they may be sub-divided into their different components, which are then classified according to certain characteristics, and conceived as more abstract ideas. In the former case the language does not proceed further than to intuition; in the latter it develops abstract conceptions and ideas.

The languages belonging to the former class are, it is true, very picturesque and poetical, possessing an extraordinarily large stock of concrete and characteristic terms for individual things, but they are quite unfitted for acting as mediums of higher thought, not being able to denote abstract ideas free from all accidental

properties. This linguistic tendency, in its turn, influences the mind, so that it becomes unable to porform the higher acts of thinking by means of abstract ideas.

There are many languages which possess words to denote the varieties of different animals, but have got no word for animal. They are able to distinguish the various modes of sitting by means of distinct picturesque terms, but the simple idea 'to sit' cannot find expression. Such languages have no proper comprehension of form, and are quite unfit for the classification and combination of ideas. The principal reason is that they do not possess particles, that is, words with a wider meaning, which support the act of thinking like algebraic formulas. When such languages are forced into modern conceptions, as, for instance, in translating the Bible they are at once overcome by the substance; they conceive as substance what we conceive as form.

The deficiency of such languages is, to no small extent, due to the fact that they do not possess a real verb, the whole expression starting from substantival conceptions.¹

All the Tibeto-Chinese languages once belonged to the class just described, although some of those which have developed a literature, like Chinese, Siamese, and Tibetan, have overcome the difficulty of not possessing a real verb, and are now able to express abstract ideas. But most of those with which we are now concerned, and especially the Tibeto-Burman, are still in the stage of being able easily to express only concrete ideas. Many of them, for instance, do not possess a general term for so simple an idea as 'man,' but have to use their own tribal name instead. They can speak of an Englishman, a Singpho, a Māndē or Gārō, and an Arleng or Mikir, but they have no word for 'man' in the abstract. Again, Lushēi has nine or ten words, at least, for different kinds of ants, but no word for 'ant' generally.

The words denoting relationship and parts of the body are the results of an abstraction. A father in the abstract, who is not the father of any particular individual, is an idea which requires a certain amount of reflection; and such words are, accordingly, hardly ever used alone in the Tibeto-Burman languages, but are (with few exceptions) always preceded by a possessive pronoun, or a noun in the genitive We find 'my father,' 'thy mother,' 'his hand'; but 'father,' 'mother,' and 'hand' are not used by themselves. Most Tibeto-Burmans would be sadly put to it to translate literally such a sentence as 'the hand possesses five fingers.' possessive pronoun of the third person occurs, of course, much more frequently than those of the first and second persons, and it has in several languages lost its proper meaning, and has become a bare meaningless prefix, used with all nouns when they are employed in an abstract sense. I have referred to this process in some detail, as it well illustrates how, as the need for the use of abstract nouns grew with the progress of civilization, it has been supplied in a very simple way in a large class of languages. We have evidence of every stage of the process, and we meet instances of it in tracts so wide apart as the Hindukush and the Chin Hills.2

Similarly, the Indo-Chinese verb has grown out of a noun,—another example of the development of the abstract from the concrete. The simplest Tibeto-Burman form of 'I go' is the concrete idea of 'my going.' 'I went 'is 'my-going completion,' and on this system has grown the entire conjugation of the neuter verb which we find in Tibeto-

¹ It would be more correct to say that these languages possess neither noun nor verb, but a 'something' which is neither noun nor verb, and which can be used for both. There is no word in English capable of denoting exactly what this indefinite 'something' is, and the use by Muller of terms borrowed from European grammatical terminology has misled more than one scholar.

² All agglutinative languages do not form abstract nouns in this way. For instance, in some Melanesian speeches, in which a similar state of affairs exists, a special termination is employed which gives a purely abstract meaning.

TONES. 47

Burman grammars. On the other hand 'I beat him' is 'by-me his beating,' which we at once see can represent either an active (I beat him), or a passive (he is beaten by me) expression. This explains the statement we so often see that these languages possess no passive. They have no voice at all, either active or passive, because they have no real verbs.

A prominent characteristic of most Tibeto-Chinese languages is that they possess significant tones. In this they differ from the Mon-Khmer Tones. languages which have none. So characteristic are they of Tibeto-Chinese that some writers have proposed to group the whole family under the title of 'Polytonic,' a classification which is false, for some Tibeto-Chinese languages (such as Western Tibetan) do not possess any significant tones at all. The number of tones varies from language to language, e.g., Siamese and Cantonese have each six, while Burmese has but two; but, wherever they occur, they are of the utmost importance for intelligibility. The essential element of a tone is that it must be significant, that is to say that, without it, the word with which it should be used, has some other meaning or has no meaning at all. If we write such a word, a sign to indicate the tone with which it is pronounced is just as important as the letters with which it is written. If we do not indicate the tone in writing, we might just as well in English write 'ca' and leave the reader to discover whether we mean 'cab' or 'cad' or 'call' or 'cam' or 'can' or 'cap' or 'car' or 'cat.' Unfortunately, in writing such Tibeto-Chinese words, not only does the method of indicating tones differ from language to language, but for many languages no attempt is made to indicate them at all. In the latter case writing without tone-marks shows only a portion of the language. We know a part of each word, but not a single complete word. If we take another example, this time from Siamese, we may take the word often written $m\bar{a}$, but this means nothing unless we give it a tone. We then learn that $-m\tilde{a}$ means 'come,' while $-m\tilde{a}$ means 'soak,' $\neg m\tilde{a}$ means 'a horse,' $\times m\bar{a}$ means 'beautiful,' and $\sim m\bar{a}$ means 'a dog.' In this way $\sim m\bar{a}$ $\sqrt{ma} - m\bar{a}$ is 'the beautiful horse comes,' but without the tone-marks it might signify half-a-dozen altogether different ideas. We could not tell if it was a horse or a dog that was beautiful or was coming, or if it was coming or soaking, or if it was a horse belonging to a dog, or a dog belonging to a horse, or if the dog was soaking the horse, or the horse was soaking the dog. Λ tone is essentially an acoustic pitch or change of pitch. A word pronounced on a high pitch means one thing, on a low pitch means another, on a rising pitch another, and so on. Annamese is one of these languages, and we need not be astonished that the first missionaries who heard it compared it to the twittering of birds. All the same, a tone has nothing to do with stress or length or abruptness, with which we are more familiar in European languages. It is a matter of pitch and pitch only, and affects every word in a language, and (with certain exceptions) each particular word always in the same way. The word for 'come,' for instance, is in Siamese always $-m\tilde{a}$, with a mid level tone, and never with any other tone, whatever be its collocation in the sentence.1 This is not the place to discuss the question of the origin of tones, nor, indeed, has it yet been finally decided. Suffice it to say that in old days, the particular tone taken by a word largely depended on its initial consonant, and that Lepsius long

¹ The question of the best method for indicating tones is discussed more fully in the Introduction to the Comparative Vocabulary forming Part II of this Volume.

ago suggested, and his arguments have been powerfully supported by Professor Conrady, that tones are often due to the disappearance of prefixes. In a dissyllabic word composed of a prefix plus a root, the accent was strongly on the root. The natural tendency was for the unaccented prefix gradually to wear away, and, instead of the accent, which, as the word was now again a monosyllable, could no longer exist, the tone was given to the word as a kind of compensation, indicating the former existence of the disappeared prefix. It follows that where prefixes are still used there is the less necessity for tones. Thus, Chinese and Siamese, which have no prefixes, have many, while Burmese, which uses prefixes more freely, has only two, and these are not used with every word, many words having no significant tone. In the Tibeto-Chinese languages of Assam and Upper Burma, which, like Burmese, are purely agglutinative languages, we notice a similar paucity of tones. We rarely hear of more than one or two, although it must be confessed that, owing to the lack of trained observers on the spot, our information on the subject is scanty.

The Glottal Check and Check and Checked Consonants.

The Glottal Check and Checked Consonants.

The Glottal Check and properly speaking, it is not a tone of any kind.¹ It consists in the abrupt conclusion of a word by a sudden check, and we may get an approximate idea of its effect from the staccato sound of the English 'no' of peremptory refusal. It is difficult to describe its nature without the use of the technical terms of phonetics, and I therefore content myself with explaining that if a word so affected ends in a vowel, it is said to be distinguished by a 'glottal check,' while, if it ends in a consonant, that consonant is said to be deprived of its off-glide. Comparing one language with another, we see that the latter often leads to the former. Thus the Lushēi mi', an eye, with a final consonant wanting the off-glide, becomes mhi' in Angāmi Nāgā and mi' in Kachin, both of which are sounded with a glottal check.

The order of words is not a distinguishing feature of the Tibeto-Chinese languages as a whole. There must have once been a time when this Order of Words. order was not fixed as it is at present. With the disappearance of prefixes and suffixes the want was felt of some method for defining the relation which each word bore to its neighbour in the sentence. This was partly done by fixing its position, but the different groups did not all adopt the same system. Each naturally arranged its words in the order of thought followed by its members, and this order of thought differed from group to group. We can note the same differences in more western languages. A Semitic speaker thinks first of what is done, and then of who does it, so that, say, an Arab says 'beats John,' where an Indo-European speaker, thinking first of the actor and then of the action, says 'John beats.' In this way the order of thought in a sentence throws considerable light on the mentality of the nation to which the speaker belongs. The Arab thinks first of what has to be done, and less urgently of the agent, while the Indo-European first selects his agent, and then decides what he is to do. The Siamese-Chinese languages, like the Mon-Khmer, adopted the order of subject. verb, object, with the adjective following the noun qualified; while in the Tibeto-Burman languages we have subject, object, verb, and the adjective usually, but not always.

¹ See Footnote to p. 33.

following the noun. Again in the Tai group, as in Mon-Khmer and Nicobarese, the genitive case follows the noun by which it is governed, while in Tibeto-Burman and Chinese, it precedes it.

In the preceding pages I have discussed the general question of the Tibeto-Burman and the Siamese-Chinese peoples and languages in the order, so far as it is known to us, of their appearance in history. I now proceed to describe in detail the languages of each of these two sub-families, and for this it will be most convenient to begin, not with Tibeto-Burman, but with the, for India, less important Siamese-Chinese. The way will then be left clear for the consideration at length of the more intricate grouping of Tibeto-Burman.

CHAPTER V.—THE SIAMESE-CHINESE SUB-FAMILY.

The Siamese-Chinese sub-family consists of two groups,—the Sinitic and the Tai.

Chinese

The former includes Chinese, and, as explained above, perhaps Karen, neither of which is dealt with in the Survey. Chinese is nowhere a vernacular of British India, although natives of the Flowery Land are found in nearly every large city as merchants, leather-workers, carpenters, cane workers

and the like. In Rangoon and Upper Burma there are considerable communities, but all are temporary immigrants, who are either merchants that have come by sea, or else people from Yün-nan.

127,527

The Tai race, in its different branches, is beyond all question the most widely spread of any in the Indo-Chinese Peninsula, and it is certainly the most numerous. Its members are to be found from Assam to far into the Chinese Province of Kwang-si, and from Bangkok to the interior of Yün-nan. The history of its migration from Yün-nan into southern Indo-China has been already briefly described.² It remains to consider the various forms of speech used by the nations of which it is composed.

Seven languages of the Tai group were recorded in the Census,—Siamese, Lao, Lü,

		Ta	i G	oup.

Khün, Daye, Shān, and Khāmtī. Of these, only Khāmtī and a stray dialect of Shān are found in the area subjected to the operations of this Survey. So far as the Census figures enumerate them, the others (except Āhom, which is a dead language) were all found in British Burma. Excluding Khāmtī, these six languages have no less than seven different written characters, and there are numerous dialects. The Siamese character, which was

as British India is concerned, is spoken principally in the Amherst and Mergui Districts of Burma. Lao, a dialect of Siamese, is widely spoken in Siam, and in Burma is found in the Amherst District, bordering on that country. It has an alphabet of its own, borrowed from that of Mon. Lü and Khün have alphabets closely related to that of Lao. They are spoken in the Kengtung Shan State, just north of the Siamese frontier. They are forms of speech intermediate between Siamese and Shān. Daye is spoken by a few people in the Southern Shan States. I know nothing about it.

. a Printed of the control of the co

•

•

Shān proper is spoken all over the Shan States, both British and Chinese, as far north as Mogaung, and also in the country to their north-west. It has a northern, a southern, and a Chinese dialect, the last having a slightly different written character, which, like all the other Shān alphabets, is borrowed from Burmese. The word "Shān," or, as sounded, "Shàn," is the Burmese pronunciation of "Shām," which is the correct form, and which reappears in the final syllable of "Assam." As this Survey did not cover the Shan States, the only example of the language across which it came, was the Aiton dialect spoken by some 200 immigrants to Assam. These will be mentioned again lower down.

In the year 1228 A.D., just about the time when Kublai Khan was establishing himself in China, a Shan tribe, the Ahoms, entered the Ãhom. country now called Assam, where they settled and to which they ultimately gave their name, 'Ahom' being but a variant pronunciation of 'Āsām.' They gradually established their power, which reached its culminating point in their victory over the Kachārīs of Dīmāpur in 1540. This made them masters of the whole of the Assam Valley, and they continued to rule their territories with vigour and success up to the end of the seventeenth century, when they became infected with Hinduism. They lost their pride of race, their habits changed, and 'instead of being like barbarians, but mighty Kshatriyas, they became, like Brāhmans, powerful in They gradually declined in strength, and Assam, after being first conquered by the Burmese, was finally annexed by the British in 1824. So completely Hinduized did they become before their final fall, that their language has been dead for centuries, and is now known only by a few priests who have remained faithful to their old traditions. Ahom is an old form of the language which ultimately became Shan, and it is of great importance for the study of the mutual relationship of the various Tai languages.

It is curious that, in spite of their long domination, the Ahoms have left so few traces of their influence on the languages of the Assam Valley. They appear to have been throughout few in number, and, as their rule extended over various tribes speaking different forms of speech, the necessity of a lingua franca soon became apparent. This could only have been either Ahom or Assamese. The latter, being an Aryan language, possessed the greater vitality, and its use was no doubt encouraged by the Hindu priests who acquired influence over the ruling race. That influence alone would not have been sufficient, for we shall see how in Manipur, where Hinduism was enthusiastically accepted, the people have still retained their language, although the Brāhmans have had to invent a written character in which to record it. Although the Ahoms have left so few traces on the language of Assam, they have nevertheless laid their mark upon its literature. One of the few Ahom words used at the present day is buranji, 'the store of instruction for the ignorant,' as they called history, and it is to them that Assam owes the historical sense which created the series of chronicles, still called by their old foreign name, that are the pride of its literature.1

When Mogaung was conquered by Alomphra, a number of Shans migrated north, and settled here and there in the country round the upper courses of the Chindwin and

Regarding the Ahom Buranjis, see Sir Edward Guit's History of Assam, pp. xff. (2nd Edition).

the Irrawaddy. Their principal settlement was high up on the latter river in the

of them were counted in the operations of this Survey. The Tai-rongs were enslaved by the Kachins en route, and all, or nearly all, now speak Singphō, the language of their masters. A few of them, together with the Phākials and the Norās, speak a Shān dialect, differing little, if at all, from Khāmtī.

HEL OZINGOGRAPHED AT THE SHRVEY IS IND A JEFICES CALGUTEA

CHAPTER VI.—THE TIBETO-BURMAN SUB-FAMILY.

We have seen that the Tibeto-Burman people first of all split into two branches,

Branches of the Tibeto- one going north and west along the valley of the Sanpo into
Burman Sub-Family. Tibet. and the other remaining on the south side of the
Himalaya to populate Assam and Burma. So early an ethnical division naturally leads
us to expect a corresponding division of languages, and such indeed is the case.
Philologists have hitherto divided the Tibeto-Burman sub-family into two main branches.
the Tibeto-Himalayan, and the Assam-Burmese or Lohitic. To these we must add a
third, miscellaneous group, which, for the sake of convenience, we may call the North
Assam Branch. So far as up to the present has been ascertained, this last occupies an
intermediate position between the two others, and is spoken by tribes whose ancestors
appear to have migrated thither independently, and at different times, from the original

nidus of the Tibeto-Burman race. On the margin I give the number of speakers recorded for each branch in this Linguistic Survey and in the Census of 1921. For the Assam-Burmese Branch the Survey figures

are much less than those of the Census, as the former did not cover anything like the whole Assam-Burmese area. Accessions of territory, or a widening sphere of political interest, accounts for the large number of speakers of the North Assam branch recorded in the Census.

This division of the Tibeto-Burman languages is not, however, so simple as it seems. The question is considered in detail on pp. 10ff. of Mutual relationship of the Volume III, Part i, of this Survey, and here it must suffice to give the broad results so far as we have been able to ascertain them. The most northern representative of the Tibeto-Himalayan Branch is Tibetan, and the most southern representative of the Assam-Burmese Branch is Burmese. Between them lie all the other Tibeto-Burman languages. The two extremes are connected along two distinct linguistic chains. The eastern chain consists of the Kachin and Lolo forms of speech. which connect Tibetan directly with Burmese. The western chain is at first a pair of chains each beginning in a different locality, but joining together lower down, like the letter Y. The joint chain then goes on and ends again in Burmese. The eastern limb of this Y begins with the miscellaneous forms of speech which make up the North Assam Branch and continues through dialects of the Naga Hills into those of the Bodo and Kuki-Chin groups, where it meets the other, western, limb. The latter begins with those dialects of Tibetan which have crossed the Himalayan watershed from the North and have occupied the southern face of that range. These also lead us into Bodo and

Kuki-Chin. The joined eastern and western limbs then lead us, like Kachin and Lolo, into Burmese. This may be roughly represented by the following diagram:—

The localities in which these groups are severally spoken are shown in the map facing the preceding page.

The Tibeto-Himalayan Branch falls more easily into three well defined groups. The first, or Tibetan, Group consists of those forms of speech which we may call by their general Indian mame of 'Bhōṭiā,' and of which the most prominent representative is Tibetan, or the Bhōṭiā of Tibet.

This last named language hardly concerns us, as the Survey does not extend to Tibet proper, but other forms of Bhōṭiā, which from another point of view may be looked upon as dialects of Tibetan, are found in Baltistan and Ladakh, and have crossed the Himalaya into the northern parts of Lahoul, Spiti, Kunawar, the State of Garhwal, Kumaun, Nepal, Sikkim and Bhutan. Tibetan proper

possesses tones, due to the loss of old prefixes, but as we go westwards into Ladakh and Baltistan we find many prefixes still in vigorous existence, and, as a consequence, no tones in use. Standard Tibetan has a great literature, but the others are mostly corrupt dialects with no written records.

The presence of the few speakers of standard Tibetan in British India is accidental, and need not detain us long. Nevertheless, from the point of view of philology and on

account of its literature, the language is of great importance, and, though there are so few speakers in India, its connexion with India is intimate. It was from India that Tibet received the Buddhist religion and the scriptures that explained it. Tibet's very alphabet is of Indian origin, and its earliest literature, dating from the 7th century A.D., consists mainly of translations of Indian books, many of which are now lost in their original form. It was these translations that changed the rude speech of the Tibetans into a copious literary language capable of reproducing the infinite wealth of Sanskrit in a manner at once literal and faithful to the spirit of the original.¹

The standard form of Tibetan is that spoken in Central Tibet, in the provinces of U and Tsang, and several dialects spoken in other parts of that country have been catalogued in Volume III, Pt. i of this Survey. So far as India is concerned, it will be suffi-

Lhoke. Dä-njong-kä. Sharpa. Kägate.

Ladakhi.

cient to consider two groups of dialects,—an Eastern and a Western. The Eastern includes Lhoke, the language of Bhutan; Dä-njong-kä, the form of Tibetan spoken in Sikkim; Sharpa and Kāgate of Nepal, and minor dialects found in Kumaun and the State of Garhwal. In Ladakh and Baltistan we find the Western Group. Ladakhī has been sufficiently

studied to have a dictionary, and several texts in the dialect have been published by Mr. Francke and other missionaries stationed at Leh.

Baltī, with a peculiar character of its own, now obsolete, owns some historical books, but cannot now be called a language with a literature. At the present day, the population being Musalmān, the Persian character is used for writing it, and in this medium we have translations of the Gospels and a few Christian tracts published in the modern language. Immediately to the East of Baltī, between it

Purik. and Ladakhī, lies the closely allied Purik, and, for statistical purposes, the two dialects have been treated as one with a joint total for the number of their speakers. As already stated, Baltī and Ladakhī to a large extent retain the ancient prefixes lost by standard Tibetan, and consequently they have not developed tones.

The above Tibeto-Burman languages are all forms of speech which can at once be recognized as dialects of the Bhōṭiā of Tibet (i.e. Tibetan). Several of them have crossed the Himalayan watershed and are now spoken on the south side of the great range. Their arrival there must have been at a comparatively late period, for their speakers still acknowledge the relationship with the parent language. But there is an older set of languages of the same sub-family, which must have crossed the Himalaya from the North before the language of Tibet had established itself in its present form, and which have, in the sites where we now find them, had their own history and, independently of Tibetan, their own development, although their more distant relationship with that language cannot be denied. These are called the "Himalayan" Tibeto-Burman languages, and their general characteristics are thus described by Professor Konow²:—

These languages are all Tibeto-Burman forms of speech, although in many of them we can observe several features which are not in accordance with Tibeto-Burman principles. Thus, a difference is often made between such words as denote animate beings and inanimate things, respectively; higher numbers are often counted in twenties and not in tens as is the case in Tibetan. Burmese, Chinese, Siamese, etc.: the personal

¹ See Preface to Jäschke's Tibetan Dictionary, p. iv.

² Vol. III, Pt. i. p. 179. With a few verbal alterations.

prenouns often have a dual in addition to the ordinary plural, and double sets of the dual and plural of the first person, one including and the other excluding the person or persons addressed; there is in many dialects a tendency to distinguish the person of the subject by adding pronominal suffixes to the verb, so that a kind of regular conjugation is effected, and so forth.

In such characteristics the dialects in question have struck out lines of their own, in entire disagreement with Tibeto-Burman, or even Tibeto-Chinese, principles. They have accordingly become modified in their whole structure. It is difficult to help inferring that this state of affairs must be due to the existence of an old heterogeneous substratum of the population, which has exercised an influence on the language. That old population must then have spoken dialects belonging to a different linguistic family, and the general modification of the inner structure of the actual forms of speech must be due to the fact that the leading principles of those old dialects have been engrafted on the languages of the tribes in question. Now it will be observed that all these features in which the Himalayan dialects differ from other Tibeto-Burman languages are in thorough agreement with the principles prevailing in the Muṇḍā forms of speech. It therefore seems probable that Muṇḍās, or tribes speaking a language connected with those now in use among the Muṇḍās, have once lived in the Himalaya and have left their stamp on the dialects there spoken at the present day.

The non-Tibeto-Burman characteristics mentioned above are seldom found together in one and the same torm of speech, and some of the dialects under consideration have few if any traces of them. On the other hand, some of these features, such as the distinction between an inclusive and an exclusive plural of the first per-onal pronoun, have penetrated much further and are, e.g., found in the western dialects of Tibetan. If we consider only the formation of verbs, the most interesting feature of Tibeto-Burman languages, it will be found that Hodgson's classification into non-pronominalized and pronominalized languages holds good for the entire field of Himalayan philology. We shall therefore adhere to it in the ensuing pages and consider the Himalayan dialects under two different headings, non-pronominalized and pronominalized dialects.

The latter group we shall further subdivide into two sub-groups, one comprising several dialects spoken in the east of the valley of Nepal, and the other consisting of some forms of speech found in Kumaun and further towards the West.

The Non-pronominalized dialects are spoken in Central and Eastern Nepal, and

Non-pronominalized Himalayan Languages.

spoken in Central and Eastern Nepal, and further to the East, in Sikkim and Bhutan. As most of them are spoken in Nepal, the statistics given on the margin are necessarily incomplete, for the numbers given represent only those speakers (mostly soldiers in our Görkhā regiments or immigrants to Darjiling) who were found in India Proper. The bulk of the speakers, who reside in Nepal, is altogether omitted from consideration. On the other hand, thanks to the

kindness of the Nepal Government, the Survey has been supplied with very complete specimens of most of these languages, and it is possible to give fairly good accounts of them, even if we do not know how many people speak them.

The influence of the ancient language of the Munda type is not so prominent in these languages as in those of the pronominalized group. There are nevertheless distinct traces of its previous importance, and we may assume with considerable probability that here we have a case of the old influence receding before that of Tibetan and of the Bodo languages spoken immediately to the East. We appear to have a clear example of this in Sunwar. In Hodgson's days it was a pronominalized language, but, if the specimens received for the Survey are to be trusted, it is so no longer. Hodgson's Essay was written in 1847, so that, allowing for the date when the specimens for the Survey were received, this change took place in little more than half a century. As we know how rapidly Tibeto-Burman languages which have no literature to act as a conservative influence do change, this short period need not surprise us, and it is pretty

^{&#}x27; Essays relating to Indian Subjects. Vol. i, p. 165.

certain that in all these languages the Muṇḍā characteristics were much stronger two or three centuries ago than they are now. On the other hand we also see in these non-pronominalized languages links connecting them with the Bodo Group. Whether they are naturally inherent in the languages or have been borrowed from the neighbouring languages we do not know, but, either way, it is the presence of these links which cause the Himalayan languages to form the western limb of the letter Y alluded to on page 53.

The head-quarters of Gurung, Murmi, Sunwar, Magari, and Newari are in Nepal, and most of the speakers recorded for the Survey were found in Darjiling and the neighbourhood, where they formed an overflow from that country. Elsewhere in British India the speakers were chiefly found in Görkhā regiments. Only one of them, Newāri, has any literature. Before the Gorkha invasion the Newars were the ruling race of the country, and the name of the tribe is only another form of the word 'Nepāl.' was thus the state language of the country until the overthrow of the Newar dynasty in 1769. Buddhism was introduced into Nepal at a very early date, and, though Sanskrit accompanied it as the language of sacred books, Newari also soon became used for literary purposes. Most Newar books are commentaries on, or translations of, Sanskrit Buddhist works current in Nepal, but from the fourteenth century inscriptions in the language began to appear, and we have other survivals in the shape of indigenous dictionaries, grammars, and dramatic works with stage directions in Newari. The oldest Newari book with which we are acquainted was written in the 14th century, and is a historical account of the chief events in Nepal from A.D. 1056 to 1388. The language has an alphabet of its own and has received some study from Russian and German scholars, but the only Englishman who has examined it was Hodgson, and even he did not give it any special attention.

Another interesting language of this group is Róng or, as the Nepalese nickname it, Lepcha. It is the principal language of Sikkim, and has an alphabet of its own and a literature which is said to consist mainly of works on Buddhist theology and connected subjects. As it is spoken within easy reach of Darjiling it has attracted the attention of English scholars, and has been provided with a grammar and dictionary written on European lines.

In the Pronominalized group the influence of the ancient Munda language is Pronominalized Himalayan far more apparent. In all of them we notice the character-languages. Is the subject but also, often, the direct and indirect objects. When a Limbu wishes to say 'I strike him,' he turns both the 'I' and the 'him' into suffixes added to the verb. 'Strike' is hip, 'him' is $-t\bar{u}$, and 'I' is -ng, so he says $hipt\bar{u}ng$, which it will be remembered is exactly parallel to the Santālī example given on page 37. Some of the languages of this group follow the Munda system of counting the higher numbers in twenties. Only two follow the Tibetan system of counting by tens, and the rest have embarrassed comparative philology by borrowing the Indo-Aryan numerals. In Tibetan and the languages allied to it there is a complicated system for expressing pronouns. But the various forms are due to the exigencies of etiquette, and each implies a different degree of politeness, just as in many other oriental languages we hear such expressions as 'this poor slave' used instead of an uncompromisingly egotistical 'I.'

But in these pronominalized languages, though there is great variation of pronominal forms, this is based on an altogether different principle. Exactly as in Muṇḍā, there are three forms indicating number,—a singular, a dual, and a plural,—for each person, and for the first person we have even greater diversity, there being separate duals for 'I and thou,' and 'I and he,' and plurals for 'I and you,' and 'I and they.' In some of the Western dialects we even find what might almost be called instances of borrowing of Muṇḍā words, and a relic of Muṇḍā or Mōn-Khmēr pronunciation in the checked final consonants which have been described on pages 37 and 48.

As stated above, these pronominalized languages fall into two groups, an Eastern and a Western, which, so far as the materials available show, are separated from each other by a comparatively wide extent of country. The Eastern group is confined to Eastern Nepal and the neighbourhood,—the so-called 'Kirānt' country, owing to which they were appropriately named by Hodgson, 'the Kirāntī Dialects.' As they all inhabit this tract figures are available for only a few of them, and these refer only to settlers in Darjiling and thereabouts and in no way indicate the true numbers of the speakers of

Eastern Pronominalized Group.

these forms of speech. I therefore omit all figures in the list given on the margin. Those curious in the matter can refer to the incomplete figures given in Appendix I (p. 392). All these languages have been described by Hodgson, some very briefly, and others,—especially Dhīmāl, Bāhing (a Khambū dialect), and Vāyu,—at considerable length. Limbū has a full modern grammar from the pen of Colonel Senior, but

regarding the rest, practically nothing is known beyond the materials collected by Hodgson and the subsequent information collected for the Linguistic Survey.

We know more about the Western Group of the pronominalized languages, as they are all spoken in British India. They possess all the Munda characteristics that

distinguish the Eastern Group, and it is here,—in Kanauri and a neighbouring dialect,—that we find the checked final consonants to which reference has already been made. The most important of these languages is the Kanauri (also written Kanawari) spoken in Kanawar, sixty or seventy miles north-east of Simla. It has received some study, and has been given a grammar and a vocabulary written by Europeans or compiled under their encouragement. Parts of the Bible have also been translated into it. Kanashi is a curious

¹ This name recalls the fabulous Kirātus of Sanskrit literature. Similarly, the Yākhās remind us of another fabulous people, the Yākhās.

² The Census figures for these languages are very incomplete. It is probable that they have all been confused with, and returned as, Tibetan.

lonely language spoken in an isolated glen in Kulu, to the north-west of Kanauri, with which it has many points of resemblance. Being surrounded on all sides by speakers of Kului, an Indo-Aryan language, it has naturally borrowed from it a portion of its vocabulary, but the character of the language as a whole clearly points to a connexion with Manchāṭī, Chamba Lāhulī, Bunán, and Ranglōi are spoken still farther to the north-west in the mountainous country of Lahul, Chamba, and Kangra. They have received attention from the Ladakh missionaries, and gospels have been translated into Manchātī and Bunán. The remaining languages of this group are spoken a long way to the east, in the mountain ranges of the north of Kumaun. Nothing is known of them except what is recorded in the Survey, and that is but little; but, with one exception, it is sufficient to show that they belong to this group. The exception is Janggali, of which the Survey failed to obtain any satisfactory specimens. The name indicates the wildness of its forest speakers, and all that we can say with certainty is that it is a member of the Tibeto-Burman sub-family. It has been classed with the others, for the present, merely on account of its geographical position.

The above remarks conclude our survey of the Himalayan Tibeto-Burman dialects. As previously pointed out, the indications of the ancient Muṇḍā influence on these forms of speech is a matter of the greatest interest. It connects languages spoken in Lahul, Chamba, and Kanāwar with the Muṇḍā languages of Central India, and, through them, with the Khāsī spoken in Assam, and with the Mōn-Khmēr languages of Further India. These last lead us on to the tongues of Indonesia and Polynesia till we arrive at Easter Island. Roughly speaking, we find this Austric Family of languages extending from 80° east longitude to 110° west longitude, a total of 170 degrees longitude, or very nearly half way round the world. Excepting the Indo-European (which has in modern times spread from Europe to America) it is the most widely extended of any of the language families of the earth.

North Assam Branch.

In describing the progress of the migrations of the Tibeto-Burman tribes, I have stated that, after the Tibetan branch had entered Tibet along the course of the Sanpo, some of its members crossed the Himalaya and appeared on the southern slope of that range. Of these, the most eastern are the inhabitants of Bhutan and Towang. East of them, extending from Towang up to and beyond the extreme eastern corner of Assam, the hills north of the Brahmaputra are occupied by four tribes, the correct classification of whose languages is a matter of considerable doubt. These are, in order, going from west to east, the Akas, Angkas, or Hrusso; the Daflās; the Abor-Miris; and the Mishmis. Most of these people live outside settled British territory. Our knowledge of them is therefore incomplete, and the figures shown on the margin in no way represent the

real numbers of the speakers, but only those who were found in British territory. The Akas or Angkas, as they are called by their neighbours, or Hrusso, as they call themselves, dwell in the hills north of Darrang, in a corner between Towang and Assam. Of all the North Assam languages we know least about theirs. An attempt was made

to gain further information concerning it for the purposes of the Survey, but our one authority, the Aka chief whose presence and help had been secured, preferred the freedom of his native hills to philology, and disappeared before the work was finished, leaving our information tantalizingly incomplete. Robinson gave us a short vocabulary in 1841, Hesselmeyer a fuller one in 1868, and J. D. Anderson another in 1896.1 The first differs altogether from the two latter, and is apparently really a corrupt Dafla. The Aka of Hesselmeyer and Anderson is certainly a Tibeto-Burman language, but it appears to have strange and peculiar phonetic laws which cause it to differ widely from the speech of any other language of the branch. Even the numerals and the pronouns have special forms, though, on the other hand, its vocabulary shows points of contact with Dafla, which do not seem to be There are very few of the tribe, or of the Daflas in British territory. due to borrowing. East of the Akas lie the Daflas, east of them the Miris, and Daflā. east of them, on both sides of the Dihang river, the Abors. The Miris and the Abors speak the same language, with only dialectic variations, and this is closely connected with Daffa. We know a good deal about Abor-Miri. Abor-Miri and Daffā. Robinson gave us grammars of both in the middle of the last century, and, to omit mention of less important notices, in later times Mr. Needham has given us a grammar and Mr. J. H. Lorrain a dictionary of the former, and Mr. Hamilton a grammar of the latter. We have seen that Aka and Daffā have points of contact in vocabulary, and at the other end of the chain Abor shows

The Mishmis, who inhabit the hills north of Sadiya, are divided into four tribes, speaking three distinct dialects. The most western are the Mishmi. Midu (or, as Robinson wrote, Nedu) or Chulikatā Mishmis, who occupy the valley of the Dihang with the adjoining Chulikatā. hills, and, to their east, the Mithun or Bebejiyā (outcaste) Mishmis. These appear to speak the same dialect, or language, but about it we know We have only an imperfect vocabulary collected by Sir George hardly anything. Campbell. Even the indefatigable Robinson failed to get specimens of it. All that he can say is 'they speak a language peculiar to themselves, yet bearing some affinity to that spoken by their neighbours the Abors and Miris.' East of the Bebejiyas lie the Taying or Digaru Mishmis, beyond the Digaru river. Digāru. Mījū Mishmis are still further east, towards the Lama valley Mijū. of Dzayul, a sub-prefecture of Lhassa. Robinson has given us grammars and vocabularies of both of these, and Mr. Needham has also written a Digaru vocabulary. two dialects, or languages, are very different.

signs of affinity to the nearest form of the Mishmi language.

The North Assam Branch of the Tibeto-Burman tongues is, it must be confessed, a General conclusions as to the North Assam Branch.

The North Assam Branch rather haphazard collection of languages grouped on geographical rather than on philological principles. Our one certain conclusion is a negative one,—that they can be classed neither as Tibeto-Himalayan, nor as Assam-Burmese, though they are connected with both. Their territory is a kind of backwater over which various waves of Tibeto-Burman immigration have swept, each leaving its record in the speech of the inhabitants. They all show points of agreement with one or other of the two remaining branches of Tibeto-Burman

¹ Sir George Campbell also printed an Aka vocabulary in 1874, which is again different.

speech, and, on the whole, they can be described as links which connect the Tibeto-Himalayan languages with the Assam-Burmese Bodo, Nāgā, Kuki-Chin, and Kachin.

Assam-Burmese Branch.

The probable race history of the tribes which employ the forms of speech belonging to the Assam-Burmese branch of the Tibeto-Burman languages has been glanced at in the preceding pages, and more details will be given further on. This branch is further divided into the following groups:—the Bodo, the Nāgā, the Kachin, the Kuki-Chin, the Burma, the Lolo-Mos'o and the Sak or Lūi. Of these the only groups that have been examined each as a whole in this Survey are the Bodo and the Nāgā. The Kachin, the

Kuki-Chin, the Sak, and the Burma have been partly examined, as some of the languages belonging to them fell within the area of its operations, but by far the greater number of the languages of these four groups belong to Burma, and have not been touched by this Survey at all. Finally, the Survey has not touched any languages at all of the Lolo-Mos'o group. The gaps left by this Survey will be filled up in due course

by the proposed Linguistic Survey of Burma, and, pending its completion, I do not propose, so far as the languages of Burma are concerned, to do more than refer very briefly to them, adopting so far as may be the classification authorized by our very incomplete knowledge. It is quite possible that this classification may have to be seriously altered when the Burma researches are completed. For Bodo and Nāgā and for some of the Kuki-Chin languages, we are on firmer ground, and I shall enter into the subject in greater detail. As regards all these groups, we may say that according to our present knowledge, the Bodo and Nāgā groups are those most closely connected with the Tibeto-Himalayan languages, while the Kuki-Chin and Burma groups display more independent characteristics. Between these two extremes lie the Kachin and Lolo-Mos'o groups, the former being more nearly related to Kuki-Chin and the latter to Burmese. The Sak (Lūi) group requires separate consideration, and seems to represent the outcome of one of the earliest Tibeto-Burman swarms.

The group of tribes known as Bodo or Bârâ forms the most numerous and important

Bodo Group.

section of the non-Aryan tribes of the Province of Assam. Linguistic evidence shows that at one time they extended over the whole of the present province west of Manipur and the Naga Hills, excepting only the Khasi and Jaintia Hills, which are inhabited by people speaking Khāsī, a language of a different family,—the Austro-Asiatic. To the north of the Khasi Hills they occupy the whole, or nearly the whole, of the Brahmaputra Valley. To the west they have made the Garo Hills their own. To the south

they spread over the plains of Cachar and, further, over the present State of Hill Tippera. On the east their sphere of influence was bounded by Manipur and the wild tribes of the Naga Hills. Between the latter and the Khasi Hills an important tribe of them were settled in the hills of North Cachar. One branch of the family, popularly known as the Kōch, extended their power to far wider limits, and overran the whole of northern Bengal at least as far west as Purnea.

During the course of centuries the members of the Bodo family have suffered much from external pressure. From the east, in the year 1228 A.D. there began the incursion of the Āhoms, a Tai race, who occupied the Brahmaputra Valley, and ruled it for centuries till we annexed it, so that, in that neighbourhood, we know of powerful Köch kingdoms only in Western Assam and in Cooch, or Köch, Bihar. To the east the Bodo tribes sank into insignificance, and, except where the mountainous nature of their homes has enabled them to maintain their independence, their members can now only be identified in communities of a few hundreds each.

The Bodo country was also invaded from the south, and this within the last two centuries. Pressed forward by their co-tribesmen beyond them, Kuki hordes left the Lushai and Chin Hills and migrated north, settling in Manipur, the Cachar plains, and more especially in the hill country of North Cachar, where the population is now mixed, partly Bodo and partly Kuki.

But the most important invasion was that of Aryan culture from the west. With its language, it has occupied the plains of Dacca, Sylhet, and Cachar, so that the Bodos of the Garo Hills are now separated from their kinsmen of Hill Tippera by a wide tract filled with a population speaking an Aryan language. So, too, with the valley of the Brahmaputra. It is now almost completely Aryanized, and the old Bodo languages are gradually dying out. The ancient kingdom of Cooch Bihar now claims Bengali as its language, the old forms of speech surviving only in a few isolated tracts. In Kamrup and Goalpara, the former head-quarters of the kingdom of Kāmarūpa, the speakers of the Aryan Assamese and Bengali are counted by hundreds, while those of Bodo are counted by tens. The very name Koch has lost its original significance, and has now come to mean a Bodo who has become so far Hinduized that he has abandoned his proper tongue and is particular as to what he eats. Nay, many of those Bodos who still adhere to their old form of speech are trilingual. Numbers of them can speak Assamese, and in addition to this they commonly employ, not only their own pure racy agglutinative tongue, but also a curious compound mongrel made up of a Bodo vecabulary expressed in the altogether alien idiom of Assamese.

I have said above that the word "Köch" has lost its original meaning, and now signifies a Hinduized Bodo. There is, however, in the Madhupur Jungle on the borders of Dacca and Mymensingh, in the Garo Hills, and the neighbouring districts of the Assam Valley, a body of people, known as Pāni, i.e. Little, Kōch, which still speaks a language of the Bodo Group. It is nevertheless doubtful if they are Kōches at all. According to some authorities they are Gārōs who have never got beyond an imperfect stage of conversion to Hinduism, involving merely the abstinence from beef. It has been conjectured that they assumed this name of 'Little', or 'Inferior' Kōches by way of propitiating the thoroughly Hinduized Kōch power which was predominant on their borders. If the specimens of their language

BODO GROUP. 63

which I have seen are correct, it is a mongrel Gārō largely mixed with Assamese, and is the only form of speech known at the present day by the name of Kōch. The traditions of the speakers do not, however, connect their tribe with the Gārōs. They believe that they came from the north-west, *i.e.*, where the Kōch kings formerly ruled, and they quite easily represent a tribe which had migrated from there to their present seats.

The true Köches are now, at any rate, represented by the Kāchārīs, who inhabit Nowgong, Kamrup, Goalpara, Cooch Bihar, and the neigh-Kāchārī. bouring country. Towards the east of this tract they call Bàrâ or Bodo. themselves Bàrâ, usually mispronounced "Bodo," and have given this name to the whole group of languages of which their tongue is a member. Towards the west they are called Meches, but everywhere their speech is the same, with a few local peculiarities. Their language is a fairly rich one, and is remarkable for the great ease with which roots can be compounded together, so as to express the most complex idea in a single "portmanteau" word. For instance, the sentence "go, and take, and see, and observe carefully" is indicated by a single word in Kāchārī. Of all the languages of the group it is the most phonetically developed, and here and there shows signs of the commencement of that true inflexion which is strange to most agglutinative languages. Another interesting fact is that in it we see going on before our eyes that process of phonetic attrition which, in all the languages of the family, has turned dissyllables into monosyllables, and has created that characteristic isolating appearance of all Indo-Chinese tongues. To take an example:—the word $s\tilde{a}$ means 'person,' and the word fi is a causal prefix. Hence the compound fi-sā means 'a made person,' i.e. 'a child,' for the Tibeto-Burman mind cannot grasp the abstract idea which we connote by the word 'child,' and can think of a child only in reference to its father, the person who made it. But here accent comes in. It is put on the second word of the compound, so that the i of fi is scarcely audible, and we get $f^i s \bar{a}$. This accounts for the origin of the word for 'child' in cognate languages. It is always a monosyllable, $f s \bar{a}$, $b s \bar{a}$, or something of the sort. We should never have known the real meaning of this monosyllable had we not Kāchārī for our guide. Nay, Kāchārī itself makes secondary monosyllables in this way. For instance, rān means 'to be dry,' but frān, which we now know to be contracted from fi-rān, means 'to make dry.'

Bodo is a language which is fairly well-known. Besides school-books, we have for the standard Bodo dialect a grammar by Endle and an excellent collection of folktales by Anderson, while Skrefsrud has given us a grammar of Mech.

Closely connected with Kāchārī is the Lālung spoken in south-west Nowgong and the neighbourhood. It forms a link between it and Dīmā-sā.

Lālung.
Dīmā-sā.

This last is the Bodo language spoken in the hill country of North Cachar. The name of the country in which it is spoken has led to its being called 'Hills Kāchārī,' but this has the disadvantage of inducing the belief that it and the 'Plains Kāchārī' of Kamrup are different dialects of the same language. Really these two are not so nearly connected as French and Spanish. They both belong to the same linguistic group, and both, no doubt, have a

¹ The Dīmā-sā of North Cachar and the Bodo of Kamrup formed one nationality till about 1540 A.D., when the Āhoms conquered the former, who at the time occupied the Dhansiri Valley as far as the Brahmaputra, with Dīmāpur as their capital. They then retreated into the North Cachar hills. The differentiation between Dīmā-sā and standard Bodo has therefore probably taken place since that date. Up to that time there had been free communication between the two branches

common ancestor, but, at the present day, they are quite distinct forms of speech, and it is best to call Hills Kāchārī by the title which its speakers give to themselves, Dīmā-sā. Since it was described in the Survey, it has been given a grammar and vocabulary by Mr. Dundas. It has a dialect of its own speken in south Nowgong called Hojai.

Going still further up the Assam Valley, we find the most Hojai. eastern of the Bodo languages, the Chutiya, which is fast Chutiyā. dying out. It is spoken only by a few Deoris, who form the priestly caste of the Chutiyā tribe. They have preserved, in the midst of a number of alien races, the language, religion, and customs which they brought about a hundred years ago from the country east of Sadiya, and which, we may presume, have descended to them with comparatively little change from a period anterior to the Ahom invasion of Assam. Their present seats are on the Majuli Island in Sibsagar, and on the Dikrang River in north Lakhimpur. Of all the languages of the Bodo group, owing no doubt to its religious associations, it appears to have preserved the oldest characteristics, and to approach most nearly the original form of speech from which they are all derived. It and Kāchārī represent the two extremes, the least developed and the most developed of the group. Like the latter, it exhibits the remarkable facility for forming compound verbs to which attention has already been drawn. This is probably a characteristic of all the dialects of the Bodo group, but it is only these two which have been thoroughly studied, so that we cannot as yet be certain about the others.

Returning to western Assam, we have next to consider Gārō, or, as its speakers call it, Māndē Kusik, the language of men. Its proper home is Gārō. the Garo Hills, but its speakers have overflowed into the plains at their feet, and have even crossed the Brahmaputra into Cooch Bihar and Jalpaiguri. Gārō, in its standard dialect, has received some literary cultivation at the hands of local missionaries, and, besides possessing a version of the Bible, has a printed dictionary, school books, religious and other works. It has a number of dialects which bear a strong resemblance to each other, though to a foreigner learning to converse with the natives the differences are striking enough. That known as Atong or Kuchu presents the greatest variations, and Gārōs from other parts of the Garo Hills can make themselves fairly well understood wherever they go except in the Atong country. It is spoken in the lower Someswari Valley which lies south-east of the Garo Hills, and in the north-east of the District of Mymensingh. It appears to approach most nearly the original language from which the various dialects are derived, for we meet typical Atong peculiarities in the most widely separated localities, where Garo, in a more or less

corrupt form, is spoken. A language closely connected with Gārō is Rābhā, which has most speakers in the District of Goalpara but which is dying out. Rābhā seems to be a Hindū name for the tribe, and many men so called are pure Kāchārīs. At one time they formed the fighting clan of the Bodo family, and members of it joined the three Assam regiments before they took to recruiting Gōrkhās.

The remaining important language of the Bodo Group is Tipurā. Its home is the State of Hill Tippera and the adjoining pertion of the Chittagong Hill Tracts, but speakers of it are also found in Dacca, Sylhet, and Cachar. The Chittagong Hill Tracts people call it Mrung. It shows points of connexion with both Dīmā-sā and Gārō, and generally has all the characteristics of

NĀGĀ GROUP. 65

the group in which it is included. An interesting point is that the word for 'man' is $b\hat{a}r\hat{a}k$, which is almost identical with the name Bârà by which the Kāchāris of Kamrup and the neighbourhood call themselves.

To complete the survey of this group, we may mention Morān, a language which is believed to be now extinct. The Morāns were the first tribe conquered by the Āhoms when they entered Assam from over the Patkoi. They became the Gibeonites of their vanquishers, being employed by them as carriers of firewood, and are still found in Sibsagar and Lakhimpur. Their language belonged to the Bodo group, but they have nearly all abandoned it in favour of Assamese.

While the number of speakers of languages belonging to the Nāgā Group is less than half that of those whose mother speech is Bodo, the number of Nāgā languages is more than four times as many. The

extraordinary diversities of speech, differences of language, not merely of dialect, which characterize the hill country between the Patkoi Range on the east, the Jaintia Hills on the west, the Brahmaputra Valley on the north, and Manipur on the south, render it one of the most interesting fields for investigation by the philologist. The Assam Valley proper is bounded on the south by ranges of hills separating it from

Sylhet and Cachar. At its western end these hills are com-Orography. paratively low, and under the name of the Garo Hills are inhabited by a people speaking a language of the Bodo Group. As we go west they become the Khasi and Jaintia Hills, with summits rising more than six thousand feet above the level of the sea. Then we have a drop into the valleys of the Kapili and the Dhansiri, a country of low hills forming the subdivision of North Cachar. Further east, the general level of the tract rapidly rises up to the Patkoi, including the south of the Nowgong, Sibsagar, and Lakhimpur districts, the whole of the Naga Hills and the north of the State of Manipur. Here we have a confused mass of mountains, some of them rising to nine or ten thousand feet, which, as we go eastwards, become ranges running north and south, connected with the Himalaya through the Patkoi and the hills beyond, and extending southwards, through Manipur and the Lushai Hills, until they terminate in the sea at Cape Negrais. It is in this country, between North Cachar and the Patkoi, that the Nagā languages are mainly spoken. The inhospitable nature of the land and the ferocity of the inhabitants have combined to foster this diversity of speech. communication is so difficult, intercourse with neighbouring tribes is rare, and, in former times, when heads were collected as eagerly as philatelists collect stamps and no girl would marry a young fellow who could not display an adequate store of specimens, if a meeting with a stranger did take place, the conversation was sure to be more or less one-sided. Under such circumstances, monosyllabic languages, such as those of the Nāgās, with no literature, with a floating pronunciation, with a system of taboo which is ever and anon prohibiting the further use of certain words, and with a number of loosely used prefixes and suffixes to supply the ordinary needs of grammar, are bound to change very rapidly and quite independently of each other. Cases are on record in which

members of a tribe who have emigrated but a comparatively short distance have developed a language unintelligible to the inhabitants of the parent village in two or three generations.

Between the Bodo and the Nāgā languages, there is an intermediate sub-group

Kabui.

Khoirão.

belonging in the main to the latter, but possessing distinct points of contact with the former.² Empēo is the best known of these, as we have a grammar and a vocabulary of it by Mr. Soppitt. It is spoken in North Cachar and in the western Nāgā Hills, and it shows points of contact not only with Bodo but also with Kuki forms of speech,

though in the main it is Nāgā. Kabui and Khoirāo belong to north Manipur. As for the former all that was known about it previous to the Survey was a short vocabulary compiled by Major McCulloch in the middle of the last century. About Khoirāo nothing was known till the Survey took it in hand. The Survey figures for these two

languages were very rough estimates, with no census figures on which they could be based. Since they were recorded, these tribes have fallen within the net of two regular censuses, and the figures shown for 1921 should be taken as more accurate than those given by the Survey.

Turning to the Nāgā languages proper, we find them falling naturally into three sub-

		Weste	ern Nā	igā S	ub-Group.

Angāmi.							

groups, a western, a central, and an eastern. Of the western languages, the most important is Angāmi, with its two dialects, Tengimā and Chakromā, and numerous subdialects of which the principal are Dzunâ, Kehenâ, and Nāli. A good deal is known about Tengimā. Beginning in the year 1850, Hodgson, Brown, Stewart, and Butler

all have given us vocabularies, and the descriptions of the tribe by the last two are classics. We have a grammar written by McCabe in the year 1887 and a phrase-book by Mr. Rivenburg in 1905, the latter having appeared subsequently to the Survey account. Then there are the admirable accounts of the language and of the habits and customs of the tribe from the pen of Mr. A. W. Davis, which appeared in the Assam Census Report of 1891, and which have been partly reprinted in Volume III, Part ii of this Survey. Finally in 1921 we have Mr. J. H. Hutton's "The Angami Nagas," which supersedes all previous accounts of the tribe, and on pp. 291ff. of which all our previous knowledge

regarding its language has been excellently summarized. To the east of the Angāmis are the Kezhāmās, to whose north again lie the barbarous and savage Semās. North of the Angāmis and west of the Semās are the Rengmās. Until the

account of this Survey was published nothing whatever was known to outsiders about the Kezhāmā language, and we had only short and incomplete lists of a few words each of Semā

¹ See McCabe, Angami Grammar, p. 4.

² In Volume III, Part ii, pp. 379ff. of the Survey, I have also included Mikir in this group, but on reconsideration of all the circumstances, I now class it as belonging to the Nagā-Kuki Sub-Group, described below.

NÄGÄ GROUP. 67

and Reagmā, but since then Mr. Hutton has given us a Semā grammar and vocabulary. The Reagmās call themselves by the name of Unzà, which is really the name of one of the two dialects of the language. It may be added that about half a century ago, a number of Reagmās were driven out of their proper home by the constant attacks of neighbouring tribes, and settled on a range of hills lying between the Mikir Hills in the Nowgong District and the forests of the Dhansiri. This portion of the tribe has lost most of its savage customs, and has to some extent taken to the habits of the people of the plains, while the others retain their primitive simplicity. The most characteristic feature which distinguishes these Western Nāgā languages from those of the Central Sub-Group is that in them the negative particle follows the word that it negatives, whereas in the Central Sub-Group it precedes it.

The principal members of the Central Sub-Group of the Nāgā languages are Āo Central Nāgā Sub-Group. and Lhōtā. Minor members are Tengsa,

Ao . Lhōtā .	•	•		Surve y. 15,500 22,000	Census of 1921 30,142 18,412

and Lhōtā. Minor members are Tengsa, Thukumi and Yachumi. We have excellent grammars and vocabularies of both Āo and Lhōtā prepared by the local missionaries. The former is well known and has often been written about, but the literature concerning it is not always easy to find, as it

has been described under at least nine different names, some appropriate enough, and others due to misapprehension. As

an instance of the latter, we may quote the name 'Assiringiā.' This is the name of a village inhabited by a 'Naked Nāgā' tribe, the members of which speak an Eastern Nāgā language. But Āos often come down from their homes to the plains through this village, and are hence wrongly given its name by the Assamese. Other names for Āo are again taken from the names of passes through which they come to the plains. Thus, those who come down through the Dop Duār Pass are called 'Dupdoria,' and those who come down by the Hatigor Duār Pass are called 'Hatigorria.' But these are names and nothing more and connote no distinction of tribe or dialect. Āo has two well-marked

dialects,—Chungli and Mongsen,—and is spoken in the north-east of the Naga Hills District. Lhōtā is spoken south of Āo about the centre of the same district, where it abuts on Sibsagar. Its speakers are generally known as Lhōtā or Tsōntsü, but they called themselves Kyỗ, while they are known to the Assamese as Miklai. All these names are also used to

Tengsa.
Thukumi.
Yachumi.
Short vocabularies enable us to connect them with Āo and Lhōtā.

indicate the language. Teagsa, Thukumi, and Yachumi are spoken by tribes beyond the Dikhu, and outside settled British territory. Very little is known about them, but

In the Eastern Nāgā Sub-Group are included the languages of all the other Nāgā

tribes found in the tract east of the Āo country, extending to the Kachin country on the east and bounded on the south by the Patkoi Range. Within these limits there are many different tribes, some of them consisting only of a few villages, and all, or nearly all, speaking languages unintelligible the one to the other. Within twenty miles of country five or six dialects are often to be found. The information that we possess

regarding the languages spoken in this area is very scanty, but, so far as our knowledge extends at present, a strong affinity appears to exist among them all. There is also a great resemblance in the manners and customs of the Nagās of this tract. They nearly all expose their dead upon bamboo platforms, leaving the body to rot there, the skull being preserved in the bone-house, which is to be found in nearly every village. In several of the tribes, the women go perfectly naked. In others the men. None of them have been recorded in the Census of 1921.

The most important general point about these Eastern Nāgā forms of speech is that characteristics of the Eastern they form a group of transition languages bridging over the gulf between the other Nāgā tongues and Kachin, the great language which lies to their east and south. Another peculiarity which deserves notice is that at least four languages of the sub-group,—Angwāngku, Chingmēgnu, Chāng, and Namsangiā,—appear to have an organic conjugation of the verb. Each tense seems to change according to the person of the subject, a state of affairs quite foreign to the other members of the Nāgā group and to Kachin, and almost foreign to the Bodo group. The Namsangiā verb (while not changing for number) has its three persons for each tense, just like Assamese or Bengali.

Taking these Eastern Nāgā languages from west to east, the first we meet are Angwāngku. Angwāngku or Tableng, and Chingmēgnu or Tamlu. A rough estimate shows that they are spoken each by about 2,500 persons, naked savages who reside (sometimes both in the same village) in the hills on both sides of the river Dikhu, before it enters the valley of the Brahmaputra. Like so many of these Tibeto-Burman tribes they call themselves by their word for 'man',—Kātā. Tableng and Tamlu are the names given to them by the English after villages in which they live. They call their own languages Angwāngku and Chingmēgnu respectively. Politically their main habitat is in the extreme north-east of the Naga Hills District. Beyond the Dikhu River, outside settled British territory, we find a language called, by the Aos, Mojung, and by its speakers, who are doubtfully estimated

to be about 6,500 in number, Chāng. The Āos call all trans-Dikhu Nāgās 'Miri', and hence the Chāngs are often alluded to by that name, which should be avoided, as leading to confusion with the altogether different Miris of the upper waters of the Subansiri. Nearly connected with Chāng is

Banparā and Mutoniā.

Banparā, with one dialect called Mutoniā, which is spoken by tribes in western and central Sibsagar to the east of Angwāngku. We have only a few lists of words belonging to this language and its dialect. At the eastern extremity of the same district lie the Mohongiās, also called Borduariās and Pāniduariās. Brown, writing in the year 1851, says that their language is the same as Namsangiā, but this is not borne out by the only available specimen of the language,—the first ten numerals published by Peal in 1872. Crossing the Sibsagar

Namsangiā.

frontier, we find the Nāgās of Lakhimpur, usually known by the name of Namsangiās, but also called Jaipuriā Nāgās after the name of the village through which they mostly descend to the plains. We know more about their language than we do about any others of the Eastern Sub-Group, for Robinson published a grammar and vocabulary of it in the year 1849. Owen, Hodgson, Peal, Sir George Campbell, and Butler have also given us more or less extended lists of words. Since then nothing seems to have been done regarding them. Indeed at

the present day local Europeans seem to know much less about the languages of Sibsagar and Lakhimpur than did their predecessors of two generations ago. Even the Linguistic Survey has failed to obtain any additional information concerning them. The list of

Eastern Nāgā languages is completed by a reference to Mōshāng and Shānggē, the languages of two tribes in the wild country south of the Patkoi. Further to the east and south we have the great Kachin country, the main language of which is Kachin or Singphō. It forms a link between the Nāgā and Tibetan languages on the one side and Burmese on the other, and also leads, through the Meithei of Manipur, from Nāgā and

There is, moreover, another chain of connexion between Nāgā and Kuki, the Nāgā-Kuki Sub-Group of languages, which, on the other side, corresponds to the Nāgā-Bodo Sub-Group already mentioned as leading from Nāgā into Bodo. The most important of these is Mikir, the head-quarters of which are now in the hills that bear the same name in the Nowgong District of Assam, and which is also

spoken in slightly varying dialectic forms in South Kamrup, the Khasi and Jaintia Hills,
Nāgā-Kuki Sub-Group.

North Cachar, and the Naga Hills. Small

Tibetan into the Kuki-Chin group.

North Cachar, and the Naga Hills. Small fragments of the tribe are also found elsewhere, and it cannot be doubted that in former times the Mikirs occupied a comparatively large tract of country in the lower Hills and adjoining lowlands of the central portion of the range stretching from the Garo Hills to the Patkoi. As elsewhere, the

Mikirs call themselves by their word for 'man,' Arleng. Their language has received some attention from the missionaries who work among them. We have a vocabulary and some short pamphlets written in it, and an admirable grammar with selected texts from the pen of the late Sir Charles Lyall. In Volume III, Part ii of the Survey I have classed Mikir as falling within the Nāgā-Bodo Sub-Group. The language has affinities with Bodo, but subsequent investigation has shown that it is much more closely connected with Kuki, and that it should be classed, as here, as belonging to the Nāgā-Kukı Sub-Group, in which it occupies a somewhat independent position.

The remaining Nāgā-Kuki languages are found chiefly in the State of Manipur. As previously explained, there occurred a backwash from the south of Kuki-Chin tribes into this state, where they found Nāgā tribes already settled. We thus find here a great number of Kuki tribes, scattered over the country, each speaking a different language, and also a number of Nāgā tribes, equally scattered, and all retaining languages of the Nāgā family in a more or less corrupted condition. The hills of north Manipur lie immediately to the south of the Angāmi Nāgā country, and it is natural that here the Nāgā characteristics are retained most vigorously. It is in this locality that we find Sopvomā.

Sopvomā, used by the Nāgās of the country round Māo (whence their alternative name of 'Māo Nāgās') on the Manipur Naga Hills frontier, about twenty miles south of Kohima. It is the language

of this sub-group which most nearly approaches the true western Nāgā speech, its closest relative being Kezhāmā. South of Māo lie the Marāms, inhabiting one large village. The two tribes claim to have a Marām. common origin, but are at perpetual feud with each other. Both Brown and McCulloch have given us vocabularies of their language, which are sufficient to show that it is different from, but akin to, Sopvomā. In connexion with Marām, we may mention Miyangkhang or Mayangkhong classed by Damant with it and with Sopvomā. Nothing more is known about it. Here Miyāngkhāng. also we may insert Kwoireng or Liyang, of which we have Kwoireng. vocabularies by Brown and McCulloch. The tribe which speaks it inhabits the country north of Manipur town, and just south of the great Barail Range which forms the northwestern boundary of the State. Immediately to their south lie the Kabui Nāgās, whose speech belongs to the Nāgā-Bodo sub-group, and their language is intermediate between that and Naga-Kuki. The forms taken by Kwoireng pronouns agree best with the latter, and therefore it is mentioned here, though the geographical position of its speakers would incline one to place it among the Naga-Bodo languages. They are a race possessed of some energy, which developes itself in trade with the Angāmis and our frontier districts. The large and important tribe of the Tangkhuls occupies the Tāngkhul. north-east of the State. They are sometimes called Luhūpā or Luppā from the luhūp, or curious helmet of cane worn by members of the northern sections of the tribe when going into battle. But such a name is misleading, as a similar headdress is worn by the Mão Nāgās. The number of Tāngkhul dialects is said to be very great, almost every village in the interior having its separate form of speech. may select three as typical,—Tangkhul proper (spoken in and near the village of Ukrul), Phadang, and Khangoi. Brown has given us three short vocabularies of Tangkhul, and the Linguistic Survey succeeded in obtaining sufficient specimens to compile a short grammar and vocabulary. Since the latter was published, the Rev. W. Pettigrew has compiled a formal Tangkhul grammar and vocabulary. The head-quarters of the tribe are at Ukrul, about forty miles to the north-east of Manipur town, and the same distance to the south-east of the Māo tract. McCulloch has given us Phadang. vocabularies of Phadang and Khangoi. The former closely Khangoi. agrees with Tangkhul, while Khangoi has much more of a Kuki complexion. The latter leads us to Maring, spoken by a Nāgā tribe inhabiting a few Maring. small villages in the Hirok range of hills which separates Manipur from Upper Burma. There is also a small colony of them in the Manipur Valley, about 25 miles south of the capital of the State. It has two dialects, Khoibu¹ and Maring proper, which are closely related to each other. It is the one of the Naga-Kuki languages which most nearly approaches the Kuki-Chin Group. The pronoun of

The Kachin Group hardly concerns us, as most members of the tribe that speaks the languages composing it dwell in Burma, and the various forms of Kachin speech will be considered in connexion with

the first person is the same as in Kuki. Both Brown and McCulloch have given us Maring vocabularies, and the Linguistic Survey has succeeded in collecting sufficient

materials to compile a short grammar of the language.

¹ The 'Saibu' of some writers is probably a misprint.

sional, pending the publication of the results of the Linguistic Survey of Burma. Another name for Kachin is, in Burma, Chingpaw, and, in Assam, Singpho. This word, in its two different forms, means properly 'a man of the Kachin tribe,' and hence 'a man' generally. The Kachins inhabit the great tract of country including the upper waters of the Chindwin and of the Irrawaddy, which lies to the east of Assam, and to the north, north-east, and north-west of the more settled parts of Upper Burma. During the last three quarters of a century they have spread a long way to the south into the Northern Shan States and the districts of Bhamo and Katha. They would probably have extended much further, if we had not annexed Upper Burma when we did; and indeed at the present moment there are isolated Kachin villages far down in the Southern Shan States and even beyond the Salwin River. Colonies of them appear to have entered Assam, where they are known as Singphos, something over a century ago. At any rate, their language shows that they must have come into that country after long contact with the Burmans. Philology and the traditions of their race alike point to the head-waters of the Irrawaddy as their original home, from which they have gradually extended, mainly along the river courses, ousting their immigrant predecessors, the Burmese and the Shans. The language of the Kachins varies greatly over the large tract of country that they occupy. They are essentially a people of the hills, and almost every hill has got its peculiar form of speech. We may, however, divide all the dialects into three classes—the northern, the Kaori, and that of the southern Kachins. The northern dialect, which we know best in the form in which it is spoken by the Singphos of Assam, has been described in the grammatical sketches of Logan, Major (afterwards Brigadier-General) Macgregor, and Mr. Needham. Southern Kachin, which is that spoken in the Bhamo district, is illustrated by those of Messrs. Hertz and Hanson, while the Kaori dialect, which is the language of the Kaori Lepais, who inhabit the hills to the east and the south-east of Bhamo, forms the basis of that written by Dr. Cushing. As regards the mutual relationship between Kachin and the other Tibeto-Burman languages, it may be said to occupy a somewhat independent position. In phonology it comes close to Tibetan; on the other hand, it is also intimately related to the Nāgā and Kuki-Chin languages and to Burmese. Among the Nāgā languages, its nearest affinities are to those that form the Eastern Sub-group. Of the Kuki-Chin languages, it shows remarkable points of resemblance to Meithei. Its relationship to Burmese has never been disputed. The inquiries made during the progress of this Survey show that Kachin, without necessarily being a transition language, forms a connecting link between Tibetan on the one hand, and Naga, Meithei, and Burmese on the other.

The territory inhabited by the Kuki-Chin tribes extends from the Naga Hills,

Kuki-Chin Group.

Cachar, and East Sylhet on the north, down to the Sandoway district of Burma in the south; from the Myittha River
in the east, nearly to the Bay of Bengal on the west. It is almost entirely filled up by
hills and mountain ridges, separated by deep valleys. We find the tribes also in the
Valley of Manipur and in small settlements in the Cachar plains and Sylhet. Both the

by the tribes themselves. The denomination 'Kuki-Chin' for this group of people and for the group of languages which they speak is therefore purely conventional, there being no indigenous name covering them all as a whole. The tribal languages fall into two main sub-groups, which we may conveniently call the 'Meithei' and the 'Chin.' We have already seen how it is probable that this stock migrated from the north or north-east into the Manipur Valley and there settled, while another branch of the same stock proceeded further south and filled the Lushai and Chin Hills. Assuming that

this represents the true facts of the national movement. Meithei. Meithei represents the language of the original settlers in Manipur, and Chin that of the more southern migration. In these southern seats the language rapidly developed, partly by its own natural growth and partly by its contact with the Burmese. The development of Meithei, the language of Manipur, has, on the other hand, been slow and independent. The Manipuris are mentioned in the Shān chronicles so early as A. D. 777, and probably owing to the fact that it has in later times developed into a literary language, their present form of speech gives the impression of an archaic character. The language has an alphabet, said to have been introduced from Bengal about two centuries ago, and, written in this character, possesses a series of chronicles, carrying the history of the State as far back as the year 1432. This character is now practically obsolete, being ousted from current use by the Bengali alphabet. The language of the chronicles, too, is obsolete and is indeed intelligible only to professed scholars who have made it their business to study it. In Mr Hodson's book 'The Meitheis' there is given a long passage in this ancient dialect with the corresponding words in modern Meithei, and there can be no better example of the rapid changes which can be undergone by a Tibeto-Burman language in the course of a We have here two different languages with hardly a word in common, few centuries. and it is difficult to believe that one is the descendant of the other. So far as I am aware, no European has ever studied the archaic dialect, and, for scientific purposes, though it would be of little practical use, a grammar of it would be of considerable value; for, between Burma and Tibet, Meithei is the only Tibeto-Burman language the history of which it would be possible to trace through at least two hundred years. For the modern language, we have now the Rev. W. Pettigrew's very full grammar, which has appeared since the Meithei section of the Survey saw the light. At the same time further information regarding this interesting language would be very welcome. We do not know if it has any dialects, and it is not improbable that further inquiries on this point would show that the apparent gulf between Meithei and the other Kuki-Chin languages is actually filled up by intermediate forms of speech. At present, this much is certain, that the modern language has preserved many traces of a more ancient stage of phonetic development, and hence sometimes agrees more closely with Burmese, and even with Tibetan, than with the Kuki-Chin languages proper. On the other hand, in certain respects it shows points of common origin with the Nāgā languages and,

especially with Kachin, being a connecting link between them and the southern, more developed, forms of speech.

The Chin forms of speech include something like forty distinct languages, which may be divided into the Northern Chin, the Central Chin, Chin languages. the Old Kuki, and the Southern Chin sub-groups. The Old Kuki languages are most closely connected with the Central Chin sub-group, but, for historical reasons, it will be most convenient to consider them first of all. They are number and most of them are

	OLI	D KUKI	SUB-GROUP	•	sixteen in number, and most of them are
Hrāngkhol			Survey. 8,450	Census of 1921. 671	spoken by tribes now living in Manipur,

	Tota	al .	48,814	26,245	from their original homes in and about

Lushai Land. Only one tribe, the Hmar remained in its original seat, and their language is at the present day much mixed with Lushei. The main migration to the north was indirectly due to the pressure exercised by the Lushais. These pressed the Thados from the south, who in their turn pressed the Old Kukis northwards into their present homes. The Thados now occupied the old home of the Old Kukis, but the irresistible progress of the Lushais northwards still continued, and the Thados had to follow those whom they had dispossessed into almost the same localities; and as their arrival was later, they and their fellows became popularly known as New Kukis, the earlier immigrants being known as Old Kukis. "Old Kuki" connotes a distinct group of cognate tribes and languages, but "New Kuki" connotes only one tribe, the Thados, out of five closely connected ones, the rest of whom still live in the Lushai and Chin Hills. It is therefore best to abandon the term "New Kuki," and to call the whole group of five by the name of "Northern Chins." The Lushais now occupy the old seat of the Old Kukis, and of, subsequently, the Thados. After dispossessing the latter, they still attempted to progress north, and it was this which brought them first into hostile contact with the British power.

We thus see that there was a reflex wave of migration of the Kuki-Chin tribes, so that we find Manipur inhabited, not only by speakers of the early Meithei, but also by tribes whose native languages, once the same as an old form of that speech, have developed independently, and, owing to the want of a literature, much faster in a country far to the south.

The principal Old Kuki languages are Hrāngkhol¹, with its dialect known as Bētē.

spoken in Hill Tippera and North Cachar, Hallam spoken in Hrangkhol. Sylhet and Hill Tippera, and Langrong, also spoken in the latter State. We have a grammar of Hrangkhol by Hallām. Mr. Soppitt, but, till the Linguistic Survey, very little has been known about the others. No less than eleven langu-Langrong. ages are spoken by small Old Kuki colonies in the State of Manipur. These are Aimol (Census figures, 387), Chiru (1,577), Kolren (600), Kom (2,855), Chote (264), Muntuk (nil), Karum (nil), Pūrūm (1,132), Anāl (3,065), Hiroi-Lamgang (744), and Vaiphei

Manipur languages.

Also written Rangkhol and Hrangchal, but Hrangkhol is said to be the correct form.

² A slightly different list of only ten tribes is given in Colonel Shakespear's 'The Lushei Kuki Clans,' p. 151.

VOL, I, PART I.

(2,882). The Chiru and the Anal are mentioned in the Manipur chronicle as far back a the middle of the 16th century, and the Aimol make their first appearance therein in 1723. Regarding the others I have no information as to when they arrived. As

already said, Hmār is still spoken in Lushai Land, the tribe having accepted Lushai domination; and finally, far to the south, on the banks of the Koladyne, we find Chaw spoken by the descendants of some Old Kuki slaves who were offered to a local pagoda by a pious queen of Arakan some three centuries ago.

The Northern Chin Sub-Group includes Thado (with its dialects Khongzai, NORTHERN CHIN SUB-GROUP. Langtung Jangshan and Sairang) Sokta

		_ 0.2001

Langtung, Jangshēn, and Sairang), Soktē, Siyin, Rāltē, and Paitē. The Thādos, who are sometimes, as explained above, called New Kukis, formerly lived in the Lushai and Chin Hills, where they had established themselves after having expelled the Old Kuki Hrāngkhol and Bētē tribes. They were

themselves gradually ousted by the Lushais from the former tract and settled down in Cachar and the Naga Hills some time between 1840 and 1850. About the middle of the 18th century the Thados of the Chin Hills were conquered by the Soktes and were driven north into the southern hills of Manipur, where they are now found and are locally known as Khongzais. There are now very few Thado villages left in the Chin

Hills. The Sokté tribe, which includes the Soktés proper and the Kamhows (or, as the Burmese call them, the Kanhows) occupy the northern parts of the Chin Hills, and the Siyins the hills immediately to their east, round Fort

White. These two last really belong to Burma, and will be dealt with in the Burmese

Linguistic Survey. They are mentioned here only to

complete the tale of the Northern Chins. The Râltēs are

principally found in the western parts of the Lushai Hills, but in modern times bodies

Paitē.

Paitē.

of them have settled in Cachar, both in the plains and in the hills. The Paitēs are scattered all over the Lushai Hills, a few being found in almost every village. They have accepted the Dulien domination, but

have retained their own language, which, however, like Ralte, is much mixed with Lushei.

The Central Chin languages are Shunkla or Tashon, Lai, Lushei or Dulien, Banjogi

and Pānkhū. These are all closely connected with the northern sub-group, but have a still greater affinity with the Old Kuki forms of speech. The Tashōns, who call themselves Shunklas, dwell in the country south of that inhabited by the Siyins and Soktēs, and properly fall within the bounds of the

Linguistic Survey of Burma. They are mentioned here only for the sake of completing the list. They form a powerful tribe, and their country is the most thickly populated in the Chin Hills. There are several dialects of the language, and at present the only one of which we know more than the name is called Zahao or Yahow. Like the Shunklas, the Lais properly

belong to Burma, although there are colonies of them whose language falls within the purview of this Survey. The Lais inhabit the middle portion of the Chin Hills, their name being said to mean 'Central.' The Burmese call them 'Baungshe' from their fashion of wearing a knot of hair over the forehead. Several dialects of Lai are spoken by the surrounding tribes, and nearly all of them also understand the standard form of that speech. This is also the case with the Shunklas, so that Lai is an important language for the purposes of administration, and has been well illustrated in a grammar

prepared by Major Newland. Lakher, one of the dialects, is spoken in the south of the Lushai Hills. Its speakers are called Zao or Zo by the Chins. They are an offshoot of the Tlan-tlang (or, as the Burmese officers say, Klang-klang) Lais, whom the British first met on the Arakan and Chittagong frontier under the name of Shendoos.

As Lai bids fair to become the general means of communication in the Chin Hills, so Lushëi has become that of the Lushai Hills. Lushēi. tract has become the scene of various migrations, new tribes at different times pushing the preceding inhabitants westwards and northwards. The Lushais, who are now the prevailing race, seem to have begun to move forwards from the south-east in the early part of the nineteenth century. Between 1840 and 1850 they obtained final possession of the North Lushai Hills, having pressed the former possessors, the Thados, before them into Cachar. In 1849 they made a raid on a Thado village in that district, and for the first time came into contact with us and found their northward progress finally stopped. Our subsequent relations with them are a matter of history. Their name is commonly spelt 'Lushai,' but the proper mode, which is employed when speaking of their language, is 'Lushei.' They usually call themselves 'Dulien' and their language 'Dulien Tong.' The latter has several dialects of which the best known is Ngente, spoken by a non-Lushai tribe in parts of the South Lushai Hills, in the villages round Demagiri, and in some of the Western Howlong villages. Another is Fannai, spoken, also by a non-Lushai tribe, between the eastern border of the South Lushai Hills and the Koladyne. Standard Lushei is comparatively well known. Several grammars have been written of it, the most important being that of the pioneer missionaries, Messrs. Lorrain and Savidge, which is accom-

panied by a very full dictionary. Banjōgī and Pānkhū are two unimportant languages spoken in the Chittagong Hill Tracts. Lushēi is the only one of these three languages for which fairly accurate figures are available.

The languages classed as Southern Chin do not, save in two instances, fall within the scope of the Linguistic Survey of India. The two exceptions are Khyang or Shö and Southern Chin Sub-Group.

	SU	m oner u	Offitt	D,	TO-CLT	ւսար,	
						Survey.	Census of 1921.

		7	Cotal			110,22	35,206

The two exceptions are Khyang or Shö and Khami, Khweymi, or Kumi. The language of the Khyangs or Khyengs (the word is merely the Arakan pronunciation of the word 'Chin') hardly concern us, as their main habitation is the country on both sides of the Arakan Yoma, in Burma, but about a hundred of them are also found in the Chittagong Hill Tracts, and thus fall within the present Survey. The Survey figures (95,599) given

on the margin are those of the Burma Census of 1891, but at that time all the languages of the Sub-Group except Khami were included under the general name of 'Khyang.' Their language has received some attention, and we have grammars and vocabularies by Major Fryer and Mr. Houghton, Khyang. besides word-lists by other writers. They are partially civilized and are hence sometimes known as 'Tame Chins.' They call themselves 'Shö.' Khami. The Khamis, or as the Burmese nickname them 'Khweymis,' 'Dogs' tails', are found in the Chittagong Hill Tracts, and along the River used to live in the Chin Hills, and came to their Koladyne in Arakan. They present seats only in the middle of the nineteenth century. We have several vocabularies of their language, and a short grammar published in 1866 by the Rev. L. Stilson. This language also properly belongs to Burma, and its inclusion in the Linguistic Survey of India is merely due to the presence of some of the speakers in the Chittagong All the other languages of this sub-group are confined to Burma, and will form subjects of the investigations of the Linguistic Survey of that Province. For the sake of provisional completeness I have given in the list in the above marginal note, the names which I have come across, but I cannot assert either that it is complete even that the names given are correct. It is not as yet even certain that all the languages named are Tibeto-Burman. The Chinmè. Chinmès, who were formerly described as inhabiting the sources of the eastern Mon, and as a connecting link between the Lais and the Chinboks, have been lost sight of since 1901. A similar Welaung. fate has befallen the Welaung Chins, who were formerly described as inhabiting the villages at the head-waters of the Myittha River, and as being bounded on the north by the Lais and on the south by Chinbok. the Chinboks. These last named live in the hills from the Maw River down to the Sawchaung. They are bounded on the north by the Lais and the Welaungs, on the east by the Burmans, on the west by the tribes of the Arakan Yoma. and on the south by the Yindu Chins. The Yindus are Yindu. found in the valleys of the Salinchaung and the northern end of the Mon Valley. The Chinbons inhabit the southern Chinbon. end of the Monchaung and stretch across the Arakan Yoma into the valley of the Pichaung. All these localities, unless otherwise stated are in, or near, the Pakôkku District of Burma. In the same District Taungtha, Anu, M'hang. are found the Taungthas. Anu is spoken in northern Arakan, and M'hang in Akyab. The last named is also reported from Kyaukpyu. This is not the place in which to explain the main points of differentiation which characterize the Kuki-Chin languages. The necessary characteristics General particulars will be found in Volume III, Part iii. But I the Kuki-Chin languages. may draw attention to one peculiarity which admirably illustrates the nature of the Tibeto-Burman construction. It is a well-known fact that none of these languages has developed a proper verb. The words which perform the functions of our verbs are, in reality, verbal nouns denoting a state or an action. are therefore dealt with as nouns, and forms corresponding to our tenses are formed by adding postpositions, or are compounds the last part of which has the meaning of 'finishing,' beginning,' etc. This is peculiarly evident in the Chin languages. In most

of them the verbs are never conceived in the abstract, but are always put into relationship with some other noun which, with us, would be the subject. This is effected in exactly the same way as with ordinary nouns, viz, by prefixing the possessive pronouns, so that the expression 'my going' is used instead of 'I go.' Thus, in Lushēi, when we want to say 'I am', we say $k\bar{a} n\bar{i}$, literally 'my being'; and when we want to say 'thou art,' we say $i n\bar{i}$, 'thy being.'

The Sak, or Lūi, Group cannot be considered as definitely established till the Linguistic Survey of Burma is completed.

The Lūis or Lōis are a group of servile tribes found in the Manipur State, and are

				SAK (LÜI) GROUP.

said both by the Meitheis and by their own traditions to be descendants of the autochthones of the country, who were dispossessed of their fertile lands by the tribes of the Meithei confederacy. McCulloch, in his Account of the Valley of Munnipore and of the Hill Tribes, gives vocabularies of three languages,—Andro, Sengmai, and Chairel,—spoken by Lūi tribes, but no such

were reported for the Linguistic Survey, and subsequent accounts have shown that they are now nearly extinct. Already in McCulloch's day (1859) they were in course of being superseded by the dominant Meithei. Andro and Sengmai are practically the same language, and they are closely connected with the Kadu mentioned below. Chairel is very different from these three, and I have been unable as yet satisfactorily to affiliate it to any other forms of Tibeto-Burman speech, although it manifestly belongs to that sub-family. Pending further information from the Burma side, I have temporarily put it together with the two other Lai languages, although I cannot suggest any relationship between it and

them. Kadu is spoken in the neighbouring Burma districts of Myitkyina, Katha, and Upper Chindwin, and Ganan in the last two of these. Ganan Kadu. Ganan. is merely a variant of Kadu, and its speakers as well as those of Kadu call themselves 'A-Sak.' This leads us on to Sak or Thet, spoken far away, in the Akyab District, which is allied to Kadu. Mr. Taylor² tells us that, according to Burmese history, in early days the Saks inhabited the upper part of the Irrawaddy Valley. Some of these are supposed to have travelled from their original settlement in North Burma in a south-westerly direction into Arakan. He suggests that some of them may have passed on into Manipur and become the ancestors of the Andro and Sengmai tribes. Another possible explanation is, however, that the original Kadu-Saks, while still in north Burma, spread also into Manipur, and that the Andro and Sengmai were left behind there, like the Kadus of Myitkyina and the neighbourhood, when the Saks migrated to the South-West. facts that they were servile tribes, and that they were expropriated by the Meitheis, show that they must have been very early settlers there, and that they were found there by the Meitheis when they conquered the country.

¹ See T. C. Hodson, The Meitheis, p. 65.

² The 'Kadus', in Vol. XII, Parti (1922) of the Journal of the Burma Research Society. It may be added that 'Sak' is the old written form, while 'Thet' is the modern colloquial form of the name.

Finally, Daingnet is the language, much corrupted by the Indo-Aryan Bengali, of
the descendants of Sak prisoners of war from the Valley of
the Lower Chindwin, who were captured by King Mindi of
Arakan at the close of the thirteenth century and made to settle in the Akyab
District¹.

The remaining languages of the Tibeto-Burman Sub-Family belong to Burma, and their consideration must be left to the Burmese Linguistic Survey. Here, for the sake of completeness I shall give little more than a catalogue as accurate as our present knowledge permits.

Under the head of the Burma Group I here include not only Burmese and the languages directly allied to it, but also a number of other languages which have been hitherto classed as hybrids or corrupt mixtures of Burmese with Kachin or other forms of speech. Another suggestion has been made that, like the Lūis, the tribes speaking them may be remnants, or predecessors, left by the Burmese in their migration from the north into Burma, or possibly that they were tribes of the same stock as the Burmese, who left the original seat after them. Pending the decision of the Burma Linguistic Survey I have therefore provisionally prefixed them to the Burma Sub-Group. Szi or Atsi and Lashi or Lechi are two tribes

Maingtha.

Phun.

of mixed origin spread along the Burmese frontier, north, east, and south-east of Bhamo. They belong to the great Lepai Kachin tribe, but are looked upon by some authorities as half-breeds. Maru, spoken in Myitkyina and Bhamo, has much the same character as Szi and Lashi. We have a grammar and vocabulary of it by Mr. Clerk. The speakers are popularly classed as Kachins, but they themselves, like the Szi and the Lashi, deny the fact, and their denial is borne out by ethnographical research and by their language. Another language which presents a character similar to these three is Maingtha. Its speakers call themselves 'Nga-chang', and the Shans call them 'Möng-s'a', which latter word has been corrupted into "Maingtha" by the Burmese. It is spoken in the Northern Shan States and also in Yün-nan and North-West China. The Phun (or as the word is spelt in Burma, Hpun) speakers are dying out, and there are now but few. The tribe

lives in the first defile of the Irrawaddy, extending a few miles north and south of the dividing line between the Bhamo and Myitkyina districts. It presents the

¹ Burnaa Census Report for 1921, Appendix B, §10.

appearance of a very archaic Burmese, but many of its words closely resemble those of the preceding four. Mrū or Mrō is a puzzling language in many respects. In the main it follows the phonetic system of Burmese, and yet it sometimes differs from it in material points, presenting forms which are paralleled not only (and most frequently) by those which we meet in Kuki-Chin, but even by the construction of Bodo and Nāgā forms of speech. It is mainly spoken in North Arakan and Akyab, but a few speakers are also found in the Chittagong Hill Tracts.

Burmese. Turning now to Burmese proper, I confine myself to enumerating those forms of speech which appear in previous Census Reports. They are there shown each as an independent language, but it is probable that the Burma Linguistic Survey will show that this is not the case, but that most, or all, of them are simply dialects of Burmese. Standard Burmese is the language spoken all over the Province by educated natives of the country. It is the language of literature and of the schools, and is the official language of Government. The written language is the same everywhere, but the local language

varies greatly. Arakanese or Rakhaing is the only form of Burmese that is spoken in the area examined by this Survey, as it appears under the name of Maghi in Bakarganj, Chittagong, and the Chittagong Hill Tracts. In these tracts the speakers are really an overflow from Burma, and the true home of the dialect is in Akyab, Sandoway, and Bassein. The Arakanese branched off from the main Burmese stock at an early date, and have had relatively little intercourse with them since that period, communication having been barred by an intermediate mountainous tract of country. Their language has therefore developed upon lines of its own, and in many respects it differs widely from the standard form of speech. It is well known that the orthodox pronunciation of the latter is extremely dissimilar from that indicated by the written language. In other words, the development of the spoken language has proceeded more rapidly than that of the written one, and the latter represents the older form. One of the proofs of this is that the pronunciation of Arakanese frequently agrees with that of Burmese as written, and not as it is spoken. Taungyo is spoken in Meiktila

and the Southern Shan States, and Danu in the Shan States and neighbouring districts. The Taungyo people call themselves

Intha. Täru. Intha also is spoken in the Southern Shan States,
and Tavoyan, or Dawé, in Tavoy. These two are closely connected, and Mr. Taylor informs me that there is good evidence that the Inthas left Tavoy for their present habitat on the Inle lake some 700 years ago. The two languages chaungtha. were then the same. Chaungtha is spoken in Akyab and the Arakan Hill Tracts, and Yanbye in Kyaukpyu and Akyab.

The languages of the Lolo-Mos'o Group belong to Yün-nan and North-Western China, but some of the speakers have overflowed into the Shan States, and will thus attract the attention of the Linguistic Survey of Burma. With the present Survey they have no connexion, beyond the fact that they belong to the Tibeto-Burman Sub-Family, and show a certain amount of relationship with Kachin. The Group is also interesting for its apparent connexion with Si-hia, a language once spoken in the Tangut country, close to the border of the

Specimens of it have been

CHAPTER VII.--THE DRAVIDIAN FAMILY.

The Dravidian race is spread widely over India, but all the members of it do not speak Dravidian languages. In the north many of them The Dravidian Race. have become Arvanized, and have adopted the Arvan languages of their conquerors while they have retained their ethnic characteristics. Besides these, many millions of people inhabiting central and southern India possessing the physical type classed by ethnologists as 'Dravidian' are almost the only speakers of two other important families of speech, the Munda and the Dravidian proper. Owing to the fact that these languages are nearly all spoken by persons possessing the same physical type, many scholars have suggested a connexion between the two families of speech, but a detailed inquiry carried out by the Linguistic Survey shows that there is no foundation for such a theory. Whether we consider the phonetic systems, the methods of inflexion, or the vocabularies, the Dravidian have no connexion with the Munda languages. They differ in their sounds, in their modes of indicating gender, in their declensions of nouns, in their method of indicating the relationship of a verb to its objects, in their numeral systems, in their principles of conjugation, in their methods of indicating the negative, and in their vocabularies. The few points in which they agree are common to many languages scattered all over the world.

Leaving, therefore, the fact of the so-called Dravidian *race* speaking two different families of languages to be discussed by ethnologists, we proceed to consider those forms of speech which are called 'Dravidian' by philologists.

We do not know how long the speakers of these languages have been settled in India. It seems to be certain that they had been long in Relationship to other lanthe country at the time of the earliest Aryan immigrations, but we do not know whether they are to be considered as autochthones or as having. in their turn, come into India from some other country. We shall see that the fact that one tribe, not of the 'Dravidian' physical type, but speaking a language certainly belonging to the Dravidian linguistic family, the Brāhūis, is found in the extreme north-west of India has been adduced by Bishop Caldwell and others as indicating that the speakers of proto-Dravidian, like the Aryans, must have entered India from the north-west; but this argument is not convincing. It puts the speakers as forming the rearguard of an invasion from the north-west, but the facts are equally consistent with an assumption that they form the survivors of the vanguard of a national movement from the east or from the south of India. Moreover, in this case, physical type would be a most unsafe guide. For some centuries the Brāhūis have lived amidst an Eranian population, with which they have freely intermarried, while they have been separated by many hundred miles from the nearest speakers of other Dravidian languages. Even if it were conclusively proved that there was such a type as that called 'Dravidian' by ethnologists, and that the original Brāhūis possessed that type, it would be surprising if, under the circumstances in which they live, they had retained it.

From the Linguistic side Bishop Caldwell adduced a great mass of materials in his attempt to show that the Dravidian languages also point to the countries beyond northwestern India and their 'Scythian' inhabitants as being their original nidus, and his

theory that they were related to Turkish, Finnish, and Hungarian has since been repeated over and over again in popular works, but has failed to gain the acceptance of modern scholars.

I have already alluded to the attempts made to prove a connexion with the Munda languages, and have explained how this cannot be considered to exist. Finally allusion may be made to comparisons with the Australian languages, and to suggestions of a possible connexion by land between India and Australia in the times when the prehistoric Lemurian Continent is believed to have existed. That certain resemblances in language have been found cannot be denied, but, as yet, we cannot quote anything as proving that a linguistic connexion is probable. All that we can say with our present knowledge is that it is not impossible. Up to a few years ago the knowledge of the Australian languages possessed by European scholars was very scanty. In 1919 Pater W. Schmidt¹ succeeded in reducing order out of chaos, and in classifying the numerous cognate tongues spoken in that great island-continent. The next stage in the investigation will be to carry on the inquiry into New Guinea, and thence into India. This inquiry was actually begun under Pater Schmidt's auspices but was interrupted during the War, and up to the date of writing nothing has appeared on the subject. We can only, for the present, wait and hope that in the near future sufficient materials will be forthcoming to settle the question once for all.

The Dravidian languages at the present day have their chief home in the south of the Indian peninsula, as contrasted with the Aryan lan-Habitat. guages of the north. The northern limit of this southern block of Dravidian languages may roughly be taken as the north-east corner of the district of Chanda in the Central Provinces. Thence, towards the Arabian Sea, the boundary runs south-west to Kolhapur, whence it follows the line of the Western Ghats to about a hundred miles below Goa, where it joins the sea. The boundary eastwards from Chanda is more irregular, the hill country being mainly Dravidian with here and there a Munda colony, and the plains Aryan. Kandh, which is found most to the north-east, is almost entirely surrounded by Aryan-speaking Orivas. Besides this solid block of Dravidian-speaking country, there are islands of languages belonging to the family far to the north in the Central Provinces and Chota Nagpur, even up to the bank of the Ganges at Rajmahal. Most of these are rapidly falling under Aryan influences. Many of the speakers are adopting the Aryan caste system and with it broken forms of Aryan language, so that there are in this tract numbers of Dravidian tribes to whose identification philology can offer no assistance. Finally, in far off Baluchistan, there is Brāhūī, concerning which, as already stated, it is uncertain whether it is the advance guard or the rearguard of a Dravidian migration.

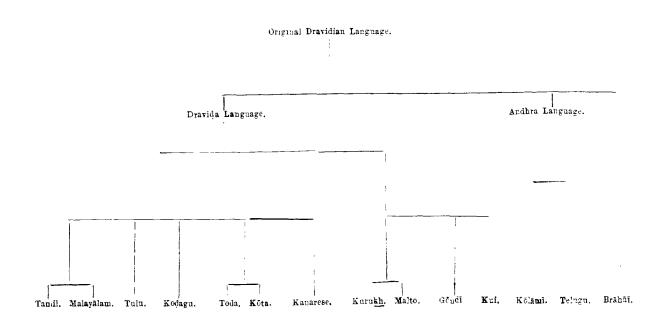

If Burnell was correct in his quotation³, a Sanskrit writer of the 7th century who Mutual Relationship of the Claimed familiarity with the languages of southern India divided them into two groups, that of the Andhra and that

¹ Die Gliederung der Australischen Sprachen. Vienna. 1919.

^{2,} Id. p. 22.

³ The reference is to an article by Burnell on p. 310 or the first volume of the 'Indian Antiquary,' and the Sanskrit writer was Kumārila Bhatta. The correct reading of the Sanskrit passage quoted is, however, doubtful. See P. T. Srinivas Iyengar in the 'Indian Antiquary,' vol. xlii, pp. 200ff.

of the Dravida country. The former corresponds to the modern Telugu and the latter to the modern Tamil and its relatives, and the division well corresponds with the present division of the existing vernaculars. The language of Andhra was the parent of Telugu. Kurukh, Malto, Kui, Kōlāmī, and Gōṇḍī are intermediate languages, and, except Brāhūī and a couple of Hybrids, all the rest are descended from the language of Draviḍa. The relationship between the various Dravidian languages is therefore illustrated in the following table:—

On this basis we can divide the Dravidian languages into four groups, to which may be added a pair of semi-Dravidian Hybrids, making five in all. The number of people speaking each, according to the Survey and according to the Census of 1921, is

	Survey. C	ensus of 1921.

TOTAL	53.073.261	64.128.052

shown on the margin. As this Survey did not extend to southern India, most of the great Dravidian languages remained outside the sphere of its operations. But as some reference to them is necessary in order to understand their connexion with Dravidian languages spoken in the area subject to the Survey, and as there is no immediate prospect of a Linguistic Survey being under-

taken in the Madras Presidency, as has been begun in Burma, in the following pages I shall endeavour to describe all the languages of the family in some detail.

The Dravidian languages are polysyllabic and agglutinative, but do not possess anything like the wonderful luxuriance of agglutinative suffixes which we have noticed as distinguishing the Muṇḍā family. They represent, in fact, a later stage of development, for, although still agglutinative, they exhibit the suffixes in a state in which they are beginning to be modified by euphonic considerations, dropping

letters in one place and changing vowels in another. The suffixes, though thus sometimes losing their original form, are nevertheless still independent and separable from the stem word, which itself remains unchanged. The following general account of the main characteristics of Dravidian forms of speech is taken, with one or two verbal alterations, from the Manual of Administration of the Madras Presidency:—

In the Dravidian languages all nouns denoting inanimate substances and irrational beings are of the neuter gender. The distinction of male and female appears only in the pronouns of the third person in adjectives formed by suffixing the pronominal terminations, and in the third person of the verb. In all other cases the distinction of gender is marked by separate words signifying ' male ' and ' female.' Dravidian nouns are inflected, not by means of case terminations, but by means of suffixed postpositions and separable particles. Dravidian neuter nouns are rarely pluralized. The Dravidian dative (ku. ki or ye) bears no analogy to any case termination found in Sanskrit or other Ind)-European languages, the resemblance to the Hindî $k\bar{o}$ being accidental. Dravidian languages use postpositions instead of prepositions. In Sanskrit adjectives are declined like substantives, while in Dravidian adjectives are incapable of declension. It is characteristic of Dravidian languages in contradistinction to Indo-European, that, wherever practicable, they use as adjectives the relative participles of verbs in preference to nouns of quality, or adjectives properly so called. A peculiarity of the Dravidian dialects (shared however with Munda) is the existence of two pronouns of the first person plural, one inclusive of the person addressed, and the other exclusive The Dravidian languages have no passive voice, this being expressed by verbs signifying 'to suffer,' etc. The Dravidian languages, unlike the Indo-European, prefer the use of continuative participles to conjugation. The Dravidian verbal system possesses a negative as well as an affirmative voice. It is a marked peculiarity of the Dravidian languages that they make use of relative participial nouns instead of phrases introduced by relative pronouns. These participles are formed from the various participles of the verb by the addition of a formative suffix. Thus, 'the person who came' is in Tamil literally 'the who-came.'

The only language of the Dravida group that (excepting a few stray dialects) fell

within the area over which the Survey operations extended was Kanarese, and this because a large number of its speakers are found within the Bombay Presidency. But even for this language twice as many are found in Madras, the Nizam's Dominions, Mysore, and Coorg. For the reasons already given, I nevertheless propose to give

a brief account of each of the languages of the group. The most cultivated and

TAMIL. 85

the best known of all the Dravidian forms of speech is Tamil. It covers the whole of southern India up to Mysore and the Ghats on the west, and reaches northwards as far as the town of Madras and beyond. It is also spoken as a vernacular in the northern part of the island of Ceylon, while most of the emigrants from the Peninsula to British Burma and the Straits Settlements, the so-called Klings or Kalingas, have Tamil for their native language; so also have a large proportion of the emigrant coolies who are found in Mauritius and in other British colonies. In India itself, Tamil speakers, principally domestic servants, are found in every large town and cantonment. The Madras servant is usually without religious prejudices or scruples as to food, headgear, or ceremonial, so that he can accommodate himself to all circumstances, in which respect he is unlike the northern Indian domestic. Tamil, which is sometimes called Malabar, and also, by Deccan Musalmāns and in the west of India, Arava, is a fairly homogeneous language. Only a few petty

dialects mentioned on the margin have been reported. Irula and Kasuva are the dialects of small tribes spoken in the Nilgiris, and they have not been touched by the Survey. In classifying them as forms of Tamil I am merely following previous authorities, and they themselves are not certain as to the correct affiliation of Kasuva. Korava,

Kaikāḍī, and Burgaṇḍī are spoken by vagrant tribes wandering over southern India, and as some of them were found in Bombay and the Central Provinces, they fell into the Survey's net, and have been analysed and described in Volume IV. There are also many provincial forms of the language, but of these the Survey is necessarily ignorant. Standard Tamil itself has two forms, the Shen (i.e. perfect) and the Koḍun or Codoon (i.e. rude). The first is the literary language used for poetry, and has many artificial features. Codoon Tamil is the style used for the purposes of ordinary life.

Ancient Tamil has an alphabet of its own, the Vatteluttu, i.e. 'round writing,' while the modern language employs one which is also in its present form very distinctive, and which can be traced up to the ancient Brahmī character used by Asōka, through the old Grantha alphabet used in southern India for writing Sanskrit. The Vatteluttu is also of North Indian origin. The modern Tamil character is an adaptation of the Grantha letters which corresponded to the letters existing in the old, incomplete, Vatteluttu alphabet, from which also a few characters have been retained, the Grantha not possessing the equivalents. Like the Vatteluttu, it is singularly imperfect considering the copiousness of the modern vocabulary which it has to record.

Tamil is the oldest, richest, and most highly organized of the Dravidian languages;

plentiful in vocabulary, and cultivated from a remote period.

It has a great literature of high merit. This is not the place in which to give an account of Tamil literature, but mention may be made of one or two of the more famous works that adorn it. Its beginning was due to the labours of the Jains, whose activities as authors in this language extended from the eighth or minth to the thirteenth century. The Kural of Tiruvalluvar, which teaches the Sānkhya

Kaikāḍī, and Burgaṇḍī are spoken by vagrant tribes wandering over southern India, and as some of them were found in Bombay and the Central Provinces, they fell into the Survey's net, and have been analysed and described in Volume IV. There are also many provincial forms of the language, but of these the Survey is necessarily ignorant. Standard Tamil itself has two forms, the Shen (i.e. perfect) and the Koḍun or Codoon (i.e. rude). The first is the literary language used for poetry, and has many artificial features. Codoon Tamil is the style used for the purposes of ordinary life.

Ancient Tamil has an alphabet of its own, the Vatteluttu, i.e. 'round writing,' while the modern language employs one which is also in its present form very distinctive, and which can be traced up to the ancient Brahmi character used by Asōka, through the old Grantha alphabet used in southern India for writing Sanskrit. The Vatteluttu is also of North Indian origin. The modern Tamil character is an adaptation of the Grantha letters which corresponded to the letters existing in the old, incomplete, Vatteluttu alphabet, from which also a few characters have been retained, the Grantha not possessing the equivalents. Like the Vatteluttu, it is singularly imperfect considering the copiousness of the modern vocabulary which it has to record.

Tamil is the oldest, richest, and most highly organized of the Dravidian languages;

plentiful in vocabulary, and cultivated from a remote period.

It has a great literature of high merit. This is not the place in which to give an account of Tamil literature, but mention may be made of one or two of the more famous works that adorn it. Its beginning was due to the labours of the Jains, whose activities as authors in this language extended from the eighth or minth to the thirteenth century. The Kural of Tiruvalluvar, which teaches the Sānkhya

philosophy in 1330 poetical aphorisms on virtue, wealth, and pleasure, is universally considered as one of its brightest gems. The author is said to have been a Pariah, and according to Bishop Caldwell, he cannot be placed later than the 10th century A.D. Another great ethical poem, the Jain *Nāladiyār*, is perhaps still older. A woman writer called Auveiyar, or 'the Venerable Matron,' and the reputed sister of Tiruvalluvar, but probably of later date, is said to have been the authoress of the Attisūdi and the Konreivēyndan, two shorter works, which are still read in Tamil schools. We may further mention the Chintamani, a romantic epic of great beauty, by an unknown Jain poet, the Rāmāyana of Kamban,—an epic said to rival the Chintāmani in poetic charm,—and the classical Tamil grammar, the Nannul, of Pavananti. Special reference must also be made to the anti-Brahmanical Tamil literature of the Sittar (i.e. Siddhas or sages). Sittar were a Tamil sect, who, while retaining Siva as the name of the one God, rejected everything in Siva-worship inconsistent with pure theism. They were quietists in religion and alchemists in science. Their mystical poems, especially the Siva-vākyam, are said to possess singular beauty, and some scholars have detected in them traces of Christian influence.

Modern Tamil literature may be taken as commencing in the eighteenth century. The most important writers are Tāyumānavan, the author of 1453 pantheistic stanzas which have a high reputation, and the Italian Jesuit Beschi (d. 1742). Beschi's Tamil style is considered irreproachable. His principal work in that language is the Tēmbāvaṇi, or 'Unfading Garland.' It is a mixture of old Tamil legends with Italian reminiscences, of which the leading example is an episode from Tasso's Gerusalemme Liberata, in which St. Joseph is made the hero.

Closely connected with Tamil is Malayalam, the language of the Malabar coast. Its name is derived from mala, the local word for 'moun-Malayālam. tain,' with a termination meaning 'possessing,' the whole word thus meaning literally 'mountain region,' and strictly applicable rather to the country in which it is spoken than to the language itself. It is a modern offshoot from Tamil, dating from, say, the ninth century. In the seventeenth century it became subject to Brahmanical influence, received a large infusion of Sanskrit words, and adopted the Grantha character in supersession of the Vatteluttu for its alphabet. From the thirteenth century the personal terminations of the verbs, till then a feature of Malayālam, as of the other Dravidian languages, began to be dropped from the spoken language, and by the end of the fifteenth century they had wholly gone out of use except by the inhabitants of the Laccadives and by the Moplahs of South Kanara, in whose speech remains of them are still found. The Moplahs, who as Musalmans had religious objections to reading Hindu mythological poems, have also resisted the Brahmanical influence on the language, which with them is much less Sanskritized than among the Hindus, and, where they have not adopted the Arabic character, they retain

the old Vatteluttu.

Malayalam has a fairly large literature, principally, as explained above, Brahmanical, and including one historical work of some importance, the *Kēraļot patti*. It has one dialect, the Yerava, spoken in Coorg.

KANARESE. 87

The true centre of the Kanarese-speaking people is Mysore. The historic "Carnatic" was for the most part in the Deccan plateau above the Ghāts. The language is also spoken in the south-

east corner of the Bombay Presidency, and occupies a strip of the coast between Tulu and Marāṭhī. Above the Ghāts, it stretches eastwards into the Nizam's Dominions, and northwards to beyond the Kistna. The character used for writing and printing Kanarese is closely connected with that employed for Telugu, but the language itself possesses greater affinity to Tamil.

The character, like that of Tamil, is derived from the Brahmi alphabet of Asoka, but by an altogether different line of descent, as its pedigree comes down through the Vengi and Chālukya scripts of the seventh century A.D. The ancient Kanarese alphabet, known as the Hala-kannada, which was the same as that in Written character. contemporary use for Telugu, dates from the thirteenth century, but since then there has arisen a marked divergence between the two characters, which has increased since the introduction of printing in the course of the nineteenth century. Neither of these characters has been limited by the number of letters in the old Vatteluttu alphabet, and hence they are as full and complete as that of Malayalam or as any of the alphabets used for writing Sanskrit. The curved form of the letters is a marked feature of both, and this is due to the custom of writing with a stilus on palmleaves, which a series of straight lines would inevitably have split along the grain. In Hala-kannada is preserved an ancient form of the language, analogous to that of literary Tamil, and nearly as artificial. Up to the sixteenth century Kanarese was free from any admixture of foreign words, but since then the vocabulary has been extensively mixed with Sanskrit. During the supremacy of Haidar Ali and Tippu Sultan, Urdů words were largely imported into it from Mysore, and it has also borrowed from Marāthi on the north-west, and from Telugu on its north-east.

Kanarese is interesting from the fact that sentences in that language have been discovered by Professor Hultzsch in a Greek play preserved Kanarese literature. in an Egyptian papyrus of the second century A.D. Its literature proper originated, like Tamil literature, in the labours of the Jains. It is of considerable extent, and has existed for at least a thousand years. Nearly all the works which have been described seem to be either translations or imitations of Sanskrit works. Besides treatises on poetics, rhetoric, and grammar, it includes sectarian works of Jains. Lingāyats, Šaivas, and Vaishņavas. Those of the Lingāyats appear to possess most originality. Their list includes several episodes of a Busava Purāna, in glorification of a certain Basava who is said to have been an incarnation of Siva's bull Nandi. There is also an admired Sataka of Somêsvara. Modern Kanarese rejoices in a large number of particularly racy folk-ballads, some of which have been translated into English by Mr. Fleet. One of the most amusing echoes the cry of the long-suffering income-tax payer, and tells with considerable humour how the 'virtuous' merchants carefully understate their incomes. Dialects of Kanarese are Badaga, Kurumba, and Golari.

						Survey.

The first two are spoken in the Nilgiri Hills. The Badaga tribe, called by our early historians the *Burghers*, speak a language which closely resembles old Kanarese. Kurumba or Kurumvārī is the dialect of the forest tribe of Kurumbas or Kurubas, and is said to be a corruption of Kanarese

with an admixture of Tamil. The Gölars or Gölkars are a tribe of nomadic herdsmen and the Höliyās are a caste of leather-workers and musicians, both hailing from the Central Provinces. They both speak the same dialect of Kanarese, which is called indifferently Gölari or Höliyā. Other Gölars, who speak a form of Telugu, will be referred to later on.

Kodagu or Coorgi is the main language of Coorg, and is described as standing survey. Census of 1921. midway between old Kanarese and Tulu. Kodagu . . . 37,218 39,995 Some authorities look upon it as a dialect of Kanarese.

Tulu, immediately to the south-west of Kanarese, is confined to a small area in or

near the district of South Canara in Madras.

The Chandragiri and Kalyānapūrī rivers in 92,325

Göndi

survived only through the secluded positions of the tribes.

of the Dravida Group. Most of them are spoken in the Central Provinces and Berar, but a few in Orissa and Chota Nagpur. One, Malto, is found even so far north as Rajmahal on the bank of the Ganges. They are all spoken by more or less uncivilized hill tribes. By far the most important of them is Gōṇḍī, spoken mainly in the Cen-

tral Provinces, but overflowing into Orissa, north-eastern Madras, the Nizam's Territories, Berar, and the neighbouring GÕNDĬ. 89

tracts of Central India. The Linguistic Survey shows that it has a common ancestor with Tamil and Kanarese, and that it has little immediate connexion with its neighbour Telugu. The word 'Gōṇḍī' means 'the language of Gōṇḍs,' but, as many Gōṇḍs have abandoned their proper tongue for that spoken by their Aryan-speaking neighbours, it is often impossible to say from the mere name alone what language is connoted by it. For instance, there are many thousands of Gōṇḍs in Baghelkhand, who have been reported to the Linguistic Survey as speaking Gōṇḍī, but this, on examination, turned out to be a broken form of Baghēlī. Similarly, the Gōṇḍ Ōjhās of Chhindwara, in the heart of the Gōṇḍ country, speak what is called

the Ōjhī dialect, but this is also a jargon based on Baghēlī. Until, therefore, all the various forms of alleged Gōṇḍī have been systematically examined, great reserve must be used in speaking of the Gōṇḍī language as a whole. The Linguistic Survey has done its best with the materials at its command, and its results may be taken as broadly correct at the present time, but there are no doubt several small, scattered, groups of Gōṇḍs the minutiæ of whose speech it has not had an opportunity of examining. That there is such a language as Gōṇḍī proper, and that it is Dravidian, and that it is spoken by at least a million and a quarter people, there is not the slightest doubt. It has received considerable attention in late years, and has been given an excellent grammar, vocabulary, and reading book from the pen of Mr. Chenevix

Trench. The language is said to have numerous dialects, of which the principal are given on the margin. Gaṭṭu or Gotte, the former being said to be the correct spelling, and Kōi or Kōyā are found in Chanda, Vizagapatam, and Godavari, and Kōi also in the Bastar State and in the Nizam's Territories. They differ little, if

at all, between themselves or from the standard dialect,—indeed, the name Kōi is that by which all Gōṇḍs call themselves. Māṛī or Maṛiā and Parjī are also spoken in Bastar. The names, however, indicate tribal rather than linguistic differences, and, so far as the information available entitles us to give an opinion, none of these names connote any real dialects. The true Gōṇḍī seems to be the same everywhere, with local variations of pronunciation, and the most that can be said is that as we go east and south it is more and more mixed with the neighbouring Telugu. Gōṇḍī has no written character of its own, and no literature, but portions of the Bible have been translated into it, and Mr. Trench, in his reading book, has preserved an interesting collection of traditions and folktales.

The Kölāms are an aboriginal tribe of east Berar and of the Wardha District of the Central Provinces. They are usually classed as Gōṇḍs, but they differ from them in personal appearance, and both they and the Gōṇḍs repudiate the connexion. Their language differs widely from that of the neighbouring Gōṇḍs. In some points it agrees with Telugu, and in other respects with Kanarese and the connected forms of speech. There are also some interesting points of analogy with the Toda of the Nilgiris, and the Kōlāms must, from a philological point of view, be looked upon as remnants of an old Dravidian tribe that have not been vol. I, PART I.

involved in the development of the principal Dravidian languages, or of a tribe that has not originally spoken a Dravidian form of speech. There are two other forms of speech,

					To	TAL	. :	23,295

spoken by petty tribes, which are closely allied to Kōlāmī, and which can most conveniently be looked upon as dialects of that language. In the Basim District of Berar there are three or four hundred Bhīls. Most of these speak Bhīlī, which will be discussed under the head of the Indo-Aryan

languages, but in the Pusad Taluqa of that District there are

with Kölāmī. Whether these people are really Bhīls or not we must leave to ethnologists to decide. Suffice it to say here that they are locally called 'Bhīls,' and that their language, like that of any other language spoken by the tribe, is locally known as 'Bhīlī.' How many of the Basim Bhīls speak this particular dialect is unknown, their language having been returned as the same as that of the other Bhīls of the District. It was not till the language specimens had been received that the existence of this Dravidian dialect was discovered by the Linguistic Survey. The other dialect is Naikī, the

language of a few Darwe Gönds of Chanda District in the Central Provinces. It is almost extinct. It differs from Göndi and agrees with Kölämi in many important points. The name 'Naiki' is not confined to this dialect. In the Central Provinces and in Berar it is commonly used as a synonym of Banjāri, and in the Bombay Presidency 'Naikadī' is the name of a Bhīl dialect. These are both Indo-Aryan.

Kandhī, as the Oṛiyās call it, or Kuī (compare the meaning of the term 'Kōi' explained above), as its speakers call themselves and their language, is commonly called Khond by Europeans. It is the language of the Khonds of Orissa and the neighbourhood, well known to ethnologists for their custom of human sacrifices. It is unwritten and has no literature, but portions of the Bible have been translated into it, the Oṛiyā character being used to represent its sounds. The language is much more nearly related to Telugu than is Gōṇḍī, and has the simple conjugation of the verb which distinguishes the Dravidian languages of the south. Kandhī is spoken not only in Orissa, but also in the Ganjam and Vizagapatam Districts of Madras and in the neighbourhood. With these latter the Survey was not concerned, and no information is available as to whether they use any dialectic peculiarities. The Kandhī of the Linguistic Survey has two dialects, an eastern, spoken in Gumsur of Madras and the adjoining parts of Orissa, and a western, spoken in Chinna Kimedi.

Further north, in the hills of Chota Nagpur, and in Sambalpur and Raigarh to their south, scattered amid a number of Muṇḍā languages, we find the Dravidian Kurukh or, as it is often called, Orāō. Still further north, on the Ganges bank, we find the closely related Malto spoken by the Maler of Rajmahal. According to their own traditions, the ancestors of the tribe speaking these two languages lived originally in the Carnatic, whence they moved north up

the Narbada River, and settled in Bihar on the banks of the River Son. Driven thence by the Musalmans, the tribe split into two divisions, one of which followed the course of the Ganges and finally settled in the Rajmahal Hills, while the other went up the Son and occupied the north-western portion of the Chota Nagpur Plateau. The latter were the ancestors of the Kurukhs and the former of the Maler. This account agrees with the features presented by the two languages, which show that (like Gondi) they must be descended from the same Dravidian dialect that formed the common origin of Tamil and Kanarese.

In the Central Provinces Kurukh is usually called Kisan, the language of cultivators, or Koda, the language of diggers. The latter name should not be confused with the name Koda, which in Chota Nagpur is sometimes given to one or other dialect of the Munda Kherwari. Kurukh has no literature, and is unwritten, save for translations of the parts of the Bible and a few small books written by Berga Orão. missionaries. It has no proper dialects, but a corrupt form,

Höröliä Jhagar.

Malhar.

Andhra Language.

known as 'Berga Orac,' is found in the Native State of Gangpur. The Kurukhs near the town of Ranchi have abandoned their own language, and speak a corrupt Mundarī called 'Hōrōliā Jhagar.' the Dravidian section of the Survey had been completed, there turned up a new language spoken in Chota Nagpur, registered for the first time in the Census of 1901 under the name of Malhar. Like

Berga Orao, it turns out, so far as we can judge from the specimens received, to be merely corrupt Kurukh.

The last of these intermediate languages is Malto or Maler, spoken by the Maler tribe inhabiting the hills near Rajmahal on the Ganges. Malto. The traditions regarding it, and its relationship to Tamil and Kanarese, have been told above, under the head of Kurukh. In its grammar it is closely related to that language, but it has borrowed much of its vocabulary from the Indo-Aryan languages spoken in its neighbourhood. It also appears to have borrowed to a small extent from the neighbouring Santali. It must be remarked that the term 'Malto' is also used to denote the corrupt Bengali spoken by the Aryanized hillmen of the Rajmahal Hills. The Maler also call themselves Sauria, and their language is also known to Europeans by the name of 'Rājmahālī.' Malto possesses no literature, except that portions of the Bible have been translated into it.

The Andhra Group is a group of dialects, for it contains only one language,—

Telugu. As a vernacular, this is more widely spread and has a greater number of speakers even than Tamil. In the north it reaches to Chanda in the Central Provinces, and, on the coast of the Bay of Bengal, to Chicacole, where it meets the Indo-Aryan Oriyā. To the west it covers half of the Nizam's dominions. The district thus occupied was the Andhra of Sanskrit geogra. phy, and was called Telingana by the Musalmans. Speakers of the language also

appear in the independent territory of Mysore and in the area occupied by Tamil. Only on the west coast are they altogether absent. The Telugu or Telinga language ranks next to Tamil among the Dravidian languages in respect of culture and copiousness of vocabulary, and exceeds it in euphony. Every word ends in a vowel, and it has been called the Italian of the East. It used to be named the Gentoo language from the Portuguese word meaning 'gentile,' but this term has dropped out of use among modern writers. It employs a written character nearly the same as that used for

Kanarese, and having the same origin, as explained under Literature. the head of that language. Its vocabulary borrows freely from Sanskrit, and it has a considerable literature. The earliest surviving writings of Telugu authors date from the twelfth century, and include a Mahābhārata by Nannappa; but the most important works belong to the fourteenth and subsequent In the beginning of the sixteenth century the court of Krishna Rāya of Vijayanagar was famous for its learning, and several branches of literature were enthusiastically cultivated. Allasani Peddana, his laureate, is called 'the Grandsire of Telugu poetry,' and was the pioneer of original poetical composition in the language, other writers having contented themselves with translating from Sanskrit. His best known work is the Svarochisha-Manucharita, which is based on an episode in the Mārkandēya Purāņa. Krishņa himself is said to have written the Āmuktamālyada. Another member of his court was Nandi Timmana, the author of the Pārijātâpaharaņa. Sūrana (flourished 1560) was the author of the Kalāpūrņódaya, which is an admired original tale of the loves of Nalakūbara and Kalabhāshiņī, and of many other works. The most important writer was, however, Vēmana (sixteenth century), the poet of the people. He wrote in the colloquial dialect, and directed his satires chiefly against caste distinctions and the fair sex. He is to-day the most popular of all Telugu authors, and there is hardly a proverb or a pithy saying that is not attributed to him.

Telugu did not fall completely under the operations of the Survey, and no information has been received as to the existence of any dialects. Dialects. far as I have been able to ascertain it has no proper dialects, unless we can call by that name a few tribal corruptions of the standard language. Such are Kōmṭāu, Sālēwārī, and Gōlarī, all reported from the Kōmţāu. District of Chanda in the Central Provinces. Komţau is Sālēwārī. the Telugu spoken by Komțis or shopkeepers; Salewari that Gōlari. spoken by Salewars or weavers; and Golari that spoken in Chanda by Gölars, a class of nomadic herdsmen. Elsewhere the Gölars are reported to speak a dialect of Kanarese. Bēradī is the Telugu spoken Bēradi. by the Berads of Belgaum in the Bombay Presidency. They are notorious thieves, and also faithful village watchmen, protecting the inhabitants from the more enterprising members of the tribe. Their language is ordinary Telugu, with a slight admixture of Kanarese. Vadarī is the dialect of a wandering tribe of quarrymen found in the Bombay Presidency. It is simply vulgar Vadari. Telugu. Kāmāthī is a similar dialect used by the brick-Kāmāthī. layers of Bombay and the neighbourhood, and similar again Dāsarī is the Dasari of the Dasarus. These last are wandering beg-

gars found in Belgaum, some of whom speak Kanarese and others Telugu.

BRĀHŪĪ. 93

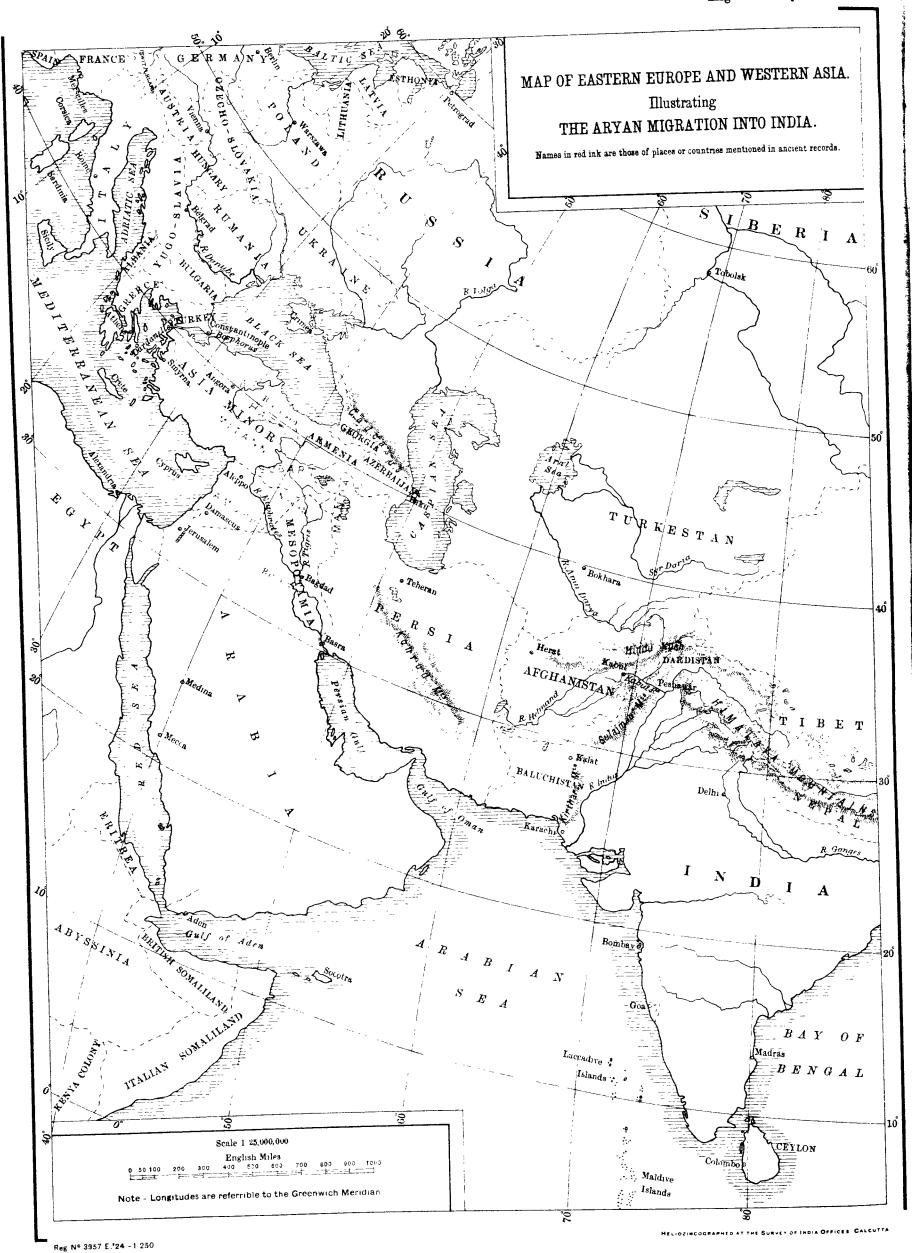

It is not necessary to do more than register the names of Ladhāḍī and Bhariā, two mongrel dialects of the Central Provinces. They are both dialects of people who in former time spoke Gōṇḍī. They have become Aryanized, and now speak corrupt Hindī.

Turning now to the extreme north-west, far away from all other Dravidian languages, in the heart of eastern Baluchistan, we come to Brāhūi. Brāhūī. Its speakers, the Brāhūis, somewhat below the medium height, with oval face, round eyes, and high slender nose, have no physical characteristics entitling ethnologists to class them as members of the Dravidian race of India proper, but that their language is in its essence Dravidian, though it has freely absorbed words from the voçabularies of the neighbouring Persian, Balochi, and Sindhi, cannot be doubted. All controversy on the subject has been finally settled by Mr. Bray's works on the people and their language, which appeared after the publication of the Dravidian section of the Survey. The people lead a pastoral life, subsisting on the produce of their herds, and are generally inoffensive, sociable, and given to hospitality. They intermarry freely with non-Brāhūī tribes, and owing to the mixed character of the race nearly every Brāhūī is bilingual. According to Mr. Bray, the present Khan of Kalat used to talk Brāhūī to his mother and Balochī to his father and brothers. Some of the Brāhūī tribes hardly speak Brāhūī at all; thus the Mīrwārīs, true Brāhūīs as they are reputed to be, speak Balochi almost to a man. The language has no written literature. When written, the Persian character is generally employed, although in books written by Europeans the Roman character is preferred.

CHAPTER VIII.—THE INDO-EUROPEAN FAMILY. THE ARYAN SUB-FAMILY.

The original home from which the populations, whom we now group together under the name of Indo-Europeans, spread over Europe and parts Original Home. of western and southern Asia, has been the subject of long discussion extending over many years. We English are probably most familiar with the cautious opinion expressed by the late Professor Max Müller that it was 'somewhere in Asia,' although his oft-repeated warning that the existence of a family of Indo-European languages does not necessarily postulate the existence of one Indo-European race. has too often been ignored by writers who should have known better. The earliest enquirers based their conclusions in the main on philology, and in former times it was universally assumed that the original seat should be sought for either on the Caucasus or on the Hindûkush. Since then other sciences have been made the handmaids of the problem. History, Anthropology, Astronomy, Geography, and Geology have all been pressed into the service. For a time philology fell into discredit, and a later opinion, based in the main on anthropology, asserted with equal decision that the locality must be looked for in north-western Europe. Still more recently a theory based on astronomy has placed it in the Arctic regions, while a school of patriotic Indian writers claims its own country as the Indo-European nidus. Later speculations have led us back to the old theory, and we have had Armenia and the country round the Oxus and Jaxartes pointed out to us as the place of origin. During the past twenty years, the opinion of Professor Otto Schrader was very generally accepted. According to him, the domicile to which we could trace back the oldest speakers of the form or forms of speech which ultimately developed into the modern Indo-European languages was probably to be sought for on the common borderland of Asia and Europe in the steppe country of southern Russia. Here they were a pastoral people; here some of their number gradually took to agriculture; and from here they wandered to the east and to the west. A later hypothesis, based on the distribution of vegetables and animals the names of which have survived from the most ancient times, on geological history, and on discoveries lately made in Asia Minor, is that put forward by Professor P. Giles in the Cambridge History of India. According to him, the centre of dispersion must have been farther to the north and west than the locality proposed by Professor Schrader, that is to say it was most probably a tract which may roughly be considered as equivalent to the modern Austria-Hungary. Finally, the late J. de Morgan, in a book that appeared while these pages were passing through the press, placed the original home in Siberia, though he admitted Austria-Hungary as a secondary centre of dispersion.

The first great linguistic division of the people was into the so-called centumspeakers and satem-speakers. Most² of the former, who
used some word cognate to the Latin centum (i.e. kentum)
for the numeral 'hundred,' wandered westwards, and their language became the parent
of that spoken by the Greek, Latin, Keltic, and Teutonic races. The latter, with whom

¹ Vol. I, pp. 65 ff.

² Not all. Remains of an old language of the centum-group have lately been discovered in the desert country of Central Asia.

we are immediately concerned, and who expressed the idea of 'hundred' by some word corresponding to the hypothetical form *satem*, in the main settled in the east, and from their language are descended the speech-groups which we call Aryan, Armenian, Phrygian, Thracian, Albanian, and Balto-Slavonic. We have to do only with the first of these six.

It is a matter for regret that this term 'Aryan' is frequently used, and especially by the English, in an extended sense, as equivalent to 'Indo-European.' It is really the name of one of the tribes of these satem-people, as used by these people themselves. In the following pages it will be used only with this meaning, and it will not be applied to other satem-people, or to languages, such as English, Latin, or German, which are sometimes called 'Aryan languages' in England. This word 'Aryan' is an Aryan word, originally used by the Aryan people, and among other suggested interpretations is said to mean 'of good family,' 'noble.' Indians and Eranians who are descended from an Indo-European stock have a perfect right to call themselves Aryans, but we English have not.'

Aryan wanderings.

Aryans wandered forth from the Russian steppes, probably by a route north of the Caspian Sea. Thence as a united people, passing through Turkestan, they finally reached the country round the modern Khokand and Badakhshan, where they split up, one party entering India viâ the Kabul Valley, and the other proceeding westwards into what is now Merv and Eastern Persia. The great difficulty in accepting this route consists, as Professor Giles points out, in the geological history of the country north of the Caspian. He says ²:—

The Caspian is an inland sea which is steadily becoming more shallow and contracting in area. Even if it had been little larger than it is at present, the way into Turkestān between it and the Aral Sea leads through the gloomy desert of Ust Urt which, supposing it existed at the period when migration took place, must have been impassable to primitive men moving with their families and their flocks and herds. But there is good evidence to show that at a period not very remote the Caspian Sea extended much further to the north, and ended in an area of swamps and quicksands, while at an earlier period which, perhaps, however, does not transcend that of the migration, it spread far to the east and included within its area the Sea of Aral and possibly much of the low-lying plains beyond. Turkestān in primitive times would therefore not have been easily accessible by this route. There is in fact no evidence that the ancestors of the Persians, Afghāns, and Hindūs passed through Turkestān at all.

Assuming, on the other hand, that a centre (whether primary or secondary) of dispersion was what is now Austria-Hungary, a natural route from there to the East,—one which we know from history has been followed by other waves of migration,—would be over the Dardanelles³ across Asia Minor from west

^{&#}x27;No completely satisfactory name has yet been found to connote the whole family of speeches which I call above 'Indo-European'. 'Indo-Germanic,' 'Indo-Teutonic.' 'Indo-Keltic,' 'Indo-Classic,' 'Japhetic,' 'Mediterranean,' 'Aryan,' and (for the speakers) 'Wiros,' have all been suggested, and some, especially 'Indo-Germanic,' are used at the present day. Something may be said for and against each of these names. I have selected 'Indo-European' as to me the least objectionable. Some well-known scholars maintain that the word 'Aryan' belongs to the common stock of all the Indo-European languages, and that in Europe it has survived in Keltic languages in the Old Irish word aire, a prince. That may be, but I know of no reason for believing that the word was ever employed to signify the speakers of Indo-European,—the 'Wiros' of Professor P. Giles,—as a whole. It is a convenient word, and that is really all that can be said for its extended sense of 'Indo-European.'

² Op. cit., p. 69.

Here also there would be an obstacle to the passage of flocks and herds, but there is no reason for assuming that these necessarily accompanied the migration. It is far more likely that these people who crossed the Dardanelles appeared as wave after wave of barbarian involvers from the north, who lived by rapine and plunder. If, by origin, they were a pastoral people, there would have been no difficulty in their acquiring new flocks and herds as plunder along their eastward route.

THE MANDAS. 97

to east, and into Persia through northern Mesopotamia. Such a migration would not have been an affair of a single movement of a single body of people, but would have been in wave after wave, and the Wiros,—as Professor Giles calls these speakers of the original parent of the Indo-European languages,—before they won through must have had many hard struggles with populations already existing. The earlier waves, perhaps beginning about 2,500 B. C., would, according to him, represent the ancestors of the Aryans, and the later those of the Armenians, Phrygians, Mysians, and Bithynians.

About 2,500 B. c. we find an Indo-European people called Manda in possession of northern and north-western Persia, or approximately what we now know as Media. These were satem-speakers. To their west lay the country of Subartu, inhabited by a non-Indo-European population, corresponding to the country north and north-west of Babylon, and including the kingdom of Mitanni in North Syria. Still further west, in Cappadocia of Asia Minor, was the Hittite capital near the present Boghazkeui, which about 2,000 B. c. was conquered by another wave of Indo-European invaders, known as Hatti¹, who were centum-speakers. We thus find that at about this period of ancient history there were two settlements of Indo-Europeans in the Near East,—one, an earlier, the Manda,—satem-speakers,—in Media, and the other, a later, the Hatti,—centum-speakers,—in Cappadocia, the two being separated by the non-Indo-European Subartu.

About 2,000 B. c. the Manda conquered Subartu, including Mitanni, and came into relations, more or less hostile, with the Hatti. Through the kingdom of Mitanni they also came into contact with the Egyptians, and correspondence between them and the Pharaohs has been found on the bank of the Nile at Tel el Amarna. In this correspondence (dating about 1400 B. c.) we find mention of several Mitanni princes bearing distinctly Indo-European names. On the other hand, among the relics of the Hatti of Boghazkeui, we find references to the gods of Mitanni,—whose names reappear later in India as Mitra, Indra, Varuna, and the two Nāsatyas,—and also, in connexion with chariot-races, Mitanni words of undoubted Indo-European origin, and in the forms which would be employed by satem-speakers. Finally, the Hatti were wiped out about 1200 B. c. by another wave of Indo-European invaders,— that of the Thraco-Phrygians,—and at about the same period, Mitanni was conquered by Assyria, and our interest in both here ceases².

Let us now return to the Manda in their earliest seat known to us, in and about Media. We have no information as to how they reached that locality, but, as stated above, Professor Giles looks upon these satem-speakers as the descendants of a very early swarm of Indo-European invaders, who, starting from Austria-Hungary, crossed the Dardanelles and pushed eastwards along Asia Minor and North Mesopotamia into Media. The Hatti would then represent a later swarm which did not get much farther than Cappadocia.

Here, I may be pardoned for making a digression, to tell of other theories put forDigression on the origin of the Mandas. Above, I have given the explanation of Professor Giles. If we accept that the original centre of dispersion was the Danubian plain,

¹⁰r Hittite. The language of the original inhabitants, which was altogether different, may be called 'Protohatti or 'Protohittite'.

² Part of the above is based on Professor A. Ungnad's Die ältesten Völkerwanderungen Vorderasiens Breslau, 1923.

VOL. I, PART 1.

and that these Mandas were the Aryans, or one of the Aryan tribes, who in later times took possession of Persia and invaded India, it is most likely that their route was the same as that taken subsequently by the Hatti, and that, after reaching Asia Minor, they crossed Mesopotamia to the seat where we find them mentioned in the earliest written documents. An alternative route round the north and east of the Black Sea has been suggested, but here the Caucasus would have presented a formidable barrier hardly passable to a pastoral people.

These Mandas, if not mentioned by name, but simply called Indo-Europeans of North Persia, have been accounted for in other ways.¹

Professor Keith, following Professor E. Meyer, agrees that these Indo-European names and words found in Mitanni and the neighbour-The theory of Asiatic origin. hood, are Aryan words, that is to say neither Indo-Aryan or Eranian, but belonging to the original Aryan language from which both are derived. If I may venture an opinion on such a subject, it seems to me to be certain that this was actually the state of affairs, and I would go further and say that it is quite possible that some of the oldest hymns of the Rig Veda, which are usually looked upon as having been composed in India, may have been originally composed in this Aryan language, and handed down from generation to generation by word of mouth till they received in India the form in which we have them at present.² But Professor Keith differs from Professor Giles in fixing the centre of dispersion. He maintains that this was in Asia. and that these satem-speaking Aryans came to Media from the East, not from the West, while the other speakers of Indo-European, most of whom were centum-speakers, went into Europe by a route north of the Aral and the Caspian. Before this is accepted, Professor Giles's arguments based on a vocabulary which points to the Danubian plain as the original centre of both centum- and satem-speakers must be considered.

A still later theory, founded not on language or ethnology, but on the history of the theory of Siberian origin. The theory of Siberian origin. The glacial period of Europe, has been put forward by the late J. de Morgan. He would put the original centre of dispersion in Siberia, which was a semi-tropical region, at a time when North Europe was covered with ice. Owing to climatic changes at the end of the glacial period, Europe became habitable while Siberia became unable to support life, and its inhabitants were forced to migrate in various directions. The ancestors of the Indo-Europeans gradually wandered off at least in two directions—one body, mostly centum-speakers, going west into Europe, where (much as Professor Giles maintains) the Danubian plain became a secondary centre of dispersion. Most of the others, who were satem-speakers, went south-west and peopled Persia and the neighbouring countries. In this way he would explain the presence of the Mandas in Media, and of the ancestors of the Persians on the Persian plateau, and it was these two closely related, but independent bodies of immigrants that together formed the Aryans. These were only cousins, not brothers, of

A summary of the more important of these will be found in Professor Keith's article "Indo-Iranians" in the R. G. Bhandarkar Commemoration Volume, pp. 81ft. Compare also the controversy between Professors Jacobi, Oldenberg, and Keith in J. R. A. S. 1909, pp. 720ft., 1095ff., 1100ff., and 1910, pp. 456ff., 464ff.

² For the original language of the oldest Vedic hymns, see footnote³ to page 115.

³ In his Article "Des Origines des Sémites et de celles des Indo-Européens" in the Revue de Synthèse Historique. Vol. XXXIV. Nos. 160-102, reprinted in Geuthner's Éphemérides Bibliographiques for June-July 1923. The question is discussed at much greater length on pp. 172ff of the same author's Préhistoire orientale which appeared while these lines were passing through the press. It is too late to do more here than draw attention to this important work.

the Hittites who came from the Danube valley, across the Dardanelles, into Asia Minor. The theory is attractive but has not, as yet, been thoroughly discussed by other scholars.

The above digression is however, hardly relevant to the history of Indo-Arvan The Aryan progress from the languages. What is relevant, is the identification of the Manda country. Mandas as Indo-Europeans twenty-five centuries before our era. It is agreed by writers who differ in other respects that these Mandas were Arvans. We therefore have here one firm chronological fact,—that there were Aryans settled, and powerful, in North and North-West Persia in 2500 B. C. Wherever they originally came from, we can find no sign that they had come from the South or from the South-East, and there is no evidence that they had come up there from Southern Persia, or (as some writers have thought) from India. We find them first in and about Media, and there they waxed powerful, and, as we have seen, conquered Subartu. To us, the immediate point of interest is that they had gods whose names we meet subsequently in India, and that they spoke a satem-language closely connected with the ancient Vedic Sanskrit. We have seen that, in the West, they were ultimately wiped out by the Assyrians, but, in Media, they maintained themselves side by side with brethren who had settled on the Persian plateau, and whose remains have lately been discovered by It is at this stage of history that we hear of the united Medes and Persians as Arvans. Some of these Arvans remained in Persia, while others continued their progress, entered India as the ultimate limit in one direction of the Great Adventure, and there became to a certain extent isolated from their brethren by the mountainous country of Afghanistan and the Hindukush.

As has happened over and over again in similar cases ², the language of those Aryans who became isolated in India among a strange population retained an archaic form, which was lost at a comparatively early period by those who remained in Persia. We have just seen how the early Indo-Aryans still called their gods by names which were in use while the joint Aryans were still within touch of Boghazkeui in Cappadocia, but which soon became obsolete in Persia. Thus, in the two countries the languages of each section of the Aryans developed on independent lines and at different rates, the rate of development in India being slower than that in Persia. The language of those

that arrived in India became the parent of the Indo-Aryan languages, while the languages of the Aryans that remained family of languages³.

As for the latter, at the time that their brethren set out in wave after wave on the further migration into India, their language was of course the same as theirs; but in

¹ In Vol. IV (1926), pp. 147ff of the Bulletin of the School of Oriental Studies Dr. Charpentier states his agreement with de Morgan's conclusion that Central Asia was the original home of the Indo-Europeans. A passing reference may also be made here to the suggestion that a relationship existed between Sumerian, the ancient language of Mesopetamia, and the early speech of the Aryans, contained in C. Autran's important article entitled L t Grèce et l'Orient ancien in 'Babylonica,' Vol. VIII (1924), pp. 129ff.

² Professor Giles quotes the parallel cases of the Spanish spoken in Mexico and Peru, where the isolation of the speakers amid a more numerous native population has tended to conserve a dialect much more archaic and much more like the Spanish of the sixteenth century than is the language now spoken in Spain. To take another example nearer home, it is well known that much of the English spoken by the lower classes in Ireland is not a corrupt form of modern English, but is the English of Elizabethan day.

³ Strictly speaking, as we employ the term 'Indo-Aryan', we should also call the other linguistic sub-family the 'Erano-Aryan'. It is, however, shorter to use 'Eranian' without the addition of 'Aryan', and the use of the word will lead to no confusion. In the case of India it is different, for there are many Indian languages which are not Aryan. Hence, in order to connote the Aryan languages which have developed in India, we must use the term 'Indo-Aryan'.

Persia, after they had been left behind, it gradually developed into Eranian. In the earlier stages of this development, when they spoke what we may call 'Proto-Eranian', i.e., while the language still retained much of the characteristics of the original Aryan joint language which had already been carried towards India, but had also shown tendencies towards some of the characteristics of Eranian, other waves of the Persian population also wandered like their predecessors towards the East, but took a more northerly course, north of the Hindukush, into the

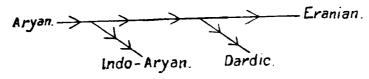

Pāmīr region. There they crossed the Hindūkush, and descended into what is now the Dard country, where they probably found the ancestors of the modern speakers of Burushaskī. These they either conquered and displaced, or else settled amongst, imposing on them their language. In this inhospitable country, separated from their home in Persia by tremendous mountain ranges, their Proto-Eranian tongue developed independently into the modern Dard languages, which still present features partly Eranian and partly Indo-Aryan¹.

As in the other cases, this first wave or set of waves of Proto-Eranian was in course of time followed by others which also took the same route north of the Hindukush. By

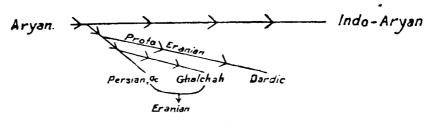

this time the Proto-Eranian of Persia had become fully developed into Eranian, and the language of these later migrants has survived in the Ghalchah languages of the Pamirs which, as we shall see, are thoroughly Eranian in character. But they did not confine themselves to the Pamirs, for some of these early Eranian speakers wandered on even further east into Central Asia. These last have disappeared as speakers of Eranian tongues, but traces of their old language have been discovered as one of the results of the explorations in Central Asia carried out by Sir Aurel Stein².

This account of the development of Dardic differs from that given on pp. 7ff. of Vol. VIII, Pt. ii of the Survey. The latter was written on the older assumption of an Aryan settlement in Khokand and Badakhshan, and of the division there into two nationalities, one marching southwards into India, and the other westwards into Persia. The language of the former developed into Indo-Aryan and of the latter into Eranian. According to that account, the Dardic languages branched off from the Eranian after the split, but before Eranian had fully developed. I illustrated it by the following diagram:—

In the present account, the result is the same, but the diagram would be :-

² Here again, for the reasons given in the preceding footnote, the explanation of the development of the Eranian languages differs from that given on page 1 of Vol. X of the Survey. But, as before, the results are the same in this case also.

Omitting the Dardic languages for the present from consideration, we return to the Eranians and the Indo-Arvans. As in the case of the western Indo-Europeans, wherever these two Aryan branches wandered, they found themselves in the presence of aboriginal populations, who were either driven by the invaders into the mountainous tracts of their own country, or else,—and this in the majority Race mixture with Aborigines. of cases,-were conquered, and compelled to adopt an Aryan form of speech. Nevertheless, as Professor Justi remarks, the ethnical character of the Aryans, who had immigrated in comparatively small numbers, and probably with an insufficient number of women, became so altered, partly by intermixture with the numerically superior aborigines, and partly owing to climatic influences, that, anthropologically speaking, they have developed into races alien to those of Europe, with whom they are connected by a relationship of language. Just as, speaking generally, the inhabitants of Southern Europe have sprung from a stem which is not that of the Swedes or Frieslanders, so, from the point of view of anthropology, the Hindus are a race altogether different from the Teutons, whose language is, nevertheless, related to Sanskrit, and the Persians of the present day show a far closer resemblance to Orientals of other stocks than they do to the linguistically related fair complexioned sons of the sea-coasts of the north.

CHAPTER IX.—THE ERANIAN BRANCH.

We have left the Eranian Branch of the Aryans in Persia, after noting that some of them spread eastwards north of the Hindūkush. These last are now represented by the inhabitants of the Pāmīrs, who Survey. Census of 1921. still speak Eranian languages, and, farther east, even in Yarkand, we find tribes of Eastern 4.610,311 1,981,675 Aryan build and complexion who have adopted the Tartar of the nations that have

conquered them in later times. We may

therefore take the Sarīkol country on the east of the Pāmīrs as the eastern limit of the Eranian languages spoken at the present day. The Eranians who remained in Persia occupied Merv, the whole of Persia, Afghanistan, and Baluchistan. In the latter tracts, the eastern limit of Eranian speech may be taken as coinciding roughly with the river Indus, although a good deal of the country west of that river was once occupied by Indo-Aryans, and Indo-Aryan languages are still found there. It does not appear that the Eranians ever occupied the country now known as Kafiristan or the Laghman country between Kafiristan and the Kabul river. That tract seems to have been occupied before their arrival by Dardic tribes.

1,987,943

4.617.890

Total in India

At the earliest period for which we have documentary evidence we find Eranian speech divided into two not very dissimilar languages, commonly called Persic and Medic, though Persic and Non-Persic would be better names¹.

The oldest form of the Persic language that we are acquainted with is the 'Old Persian' of the Achæmenides, of which the best known Persic, Old Persian. example is found in one of the versions of the inscription of Darius I or Dārayavahush (B. c. 522-486) at Behistūn. It was the official language of the court of Persepolis, and as such was used over the whole of Eran, being employed not only in government documents, but also, inevitably, as a common means of communication between the inhabitants of different provinces, much as Hindostānī is used in India at the present day. The next stage of this Persic language which we meet in a written form is the "Middle Persian" or Pahlavī (i.e., Parthian) of Middle Persian. the Sassanides (third to seventh centuries A. D.), which bears much the same relation to modern Persian that the Prakrit languages do to the modern Indo-Aryan vernaculars. Finally, we have modern Persian, Persian. which developed into a language of literature and polite society, and thus became fixed at an early period. Save for the admixture of Arabic

¹ The characteristic features of the 'Medic' language were, and are, found not only in Media, which corresponds to the modern North-Western Persia and Kurdistan, the ancient Manda, but also in tracts far to the east. They are, moreover, characteristic of the language of the Avesta, which is East Eranian in origin. The term 'Medic' is, however, a convenient one as describing the tribe which was most important politically among those who used the non-Persic language. At the same time it should be carefully noted that although the Avesta is written in 'Medic', that is no ground for assuming that its birthplace was Media or anywhere in the neighbourhood. This view, it is true, is held by some scholars, but the question may not be begged by the wrong use of the word 'Medic'.

MEDIC. 103

words, it has been on the whole the same language for a thousand years. Under Musalmān dominion it became one of the great vehicles of Indian literature, and some of the most famous Persian books, including the greatest lexicographical works, have been composed in India. It is nowhere a vernacular of that country, but is one of the languages of belles lettres among the educated Musalmans. As stated by Mr. Baines in the Census Report for 1891, 'In Bengal and Rangoon there are remnants of the old ruling families of Delhi and Lucknow; in the Panjab, traders and immigrants are found, and the refugees from Afghanistan, and in Bombay, horse-dealers and emigrants from Persia who have settled down in the chief towns. Beyond these centres there is hardly any real Persian spoken, and a good deal of what is returned as such is but the better sort of Urdū.' In addition to the above we may mention a Persian colony in Baluchistan. Here we find 7,579 people speaking a Persian dialect locally known as Dehwari. These, however, are not by any means the only people of Eranic origin who have made India their home. In the times of the Greek successors of Alexander the Great and of the Indo-Scythians who followed them, adherents of the old Eranian sun-worship entered India as missionaries. Together with the elements of their religion, they were adopted into the ranks of the Brāhmans themselves, and still survive as Śākadvīpīya Brāhmans. In later times votaries of the rival and more orthodox cult of Zarathustra settled in Western India, in order to escape Islamitic persecution in their native land, and are now represented by the flourishing community of Parsees. But, in both cases, these immigrants have abandoned their Eranian vernacular and at the present day speak languages of India. The Persian of the Afghan refugees closely resembles the Badakhshī dialect of that form of speech, and contains a number of Pashto words.

The group of dialects which are classed together under the name of the 'Medic' language was spoken in widely separated parts of Eran.

Media itself was in what is at the present time Western

 Persia, yet the Medic word for "dog," spaka, which Herodotus has preserved to us, can claim the Ōrmurī spuk, and the Paṣḥtō spāe, both spoken nowadays in distant Afghanistan, among its descendants, but not the neighbouring Persian sag. In fact

the one literary monument of ancient Medic that we possess, the Avesta, had its home, according to most authorities, not in Media, but in East Erān. The oldest parts of the Avesta probably date from about the sixth century before our era, and although large portions of it belong to a period many centuries later, we have no documents to illustrate the mediæval Medic, as Pahlavī does for Persic. All that we have are the modern languages that have developed from it. These are the Ghalchah languages of the Pāmīrs, Paṣḥtō, Ōrmurī, Balōchī, and a number of dialects (of which the best known is Kurdish) spoken all over Persia and beyond. As the most important of these languages are spoken in the eastern portion of the ancient Erān, they are conveniently classed under the name of the Eastern Group of the Eranian languages¹ The dialects

¹ This name 'Eastern' must be taken with the same reservation as that with which 'Medic' is here employed. The miner dialects are spoken not only in Central Persia, but even in the far north-west on the shores of the Caspian.

AFGHANISTAN-BALUCHISTAN SUB-GROUP.

				Survey.	Census of 1921.
Balō chī	•			704,586	485,408
Ōrmuŗī	•		•	 3,905,725	 1 ,49 6,26 7

spoken in Persia do not concern us. Those more immediately connected with India may, on purely geographical grounds, be put under two sub-groups,—the Afghanistan-Baluchistan and the <u>Gh</u>alchah. I shall deal with them in this order, beginning from the south.

The home of the Balochi language is, as its name implies, Baluchistan, but it extends considerably beyond the usually recognized limits Balochi. of that province. On the east it reaches to the Indus, as far north as Dera Ghazi Khan, although the country along the banks of that river is mainly inhabited by Indians whose language is either Lahndā or Sindhī. Northwards, in British Baluchistan, it extends to near Quetta, or, say, the thirtieth degree of north latitude, and, as we go westwards, it is found even further than this, up to the valley of the Helmand, where Pashto becomes the main language of the country. Still further west, where the lower course of the Helmand runs south to north, we come to the Persian province of Sistan. Here Baloches are found mixed with Persians, and the language of the tract is partly Balochi and partly Persian. Indeed nomadic Baloches are found still further north, in Karman and as far as central Khurasan. South of Quetta, Balochi is the language of the greater part of British Baluchistan. It extends westwards as the principal language of the country over Persian Baluchistan as far as Bampur, and is spoken by at least a part of the population so far west as Jask, or, say, the fifty-eighth degree of east longitude. This large tract of country contains also another nationality, non-Eranian, namely the Brāhūīs, who have a language of their own. Brāhūī is spoken in the central part of British Baluchistan, and separates

Balōchī.

Balōchī into two clearly distinguished dialects, viz., Eastern Balōchī and Western Balōchī or Makrānī. The figures given for the Survey on the margin are, so far as the western dialect is concerned, estimates, and include 200,000 as the probable

number of speakers of the language in Persian territory. Each of the dialects has several minor sub-dialects, but the main division into Eastern and Western Balōchī is sufficient for our present purpose. Besides phonetical and grammatical differences, the former is much richer in words borrowed from India. As in Paṣḥtō, both dialects freely borrow Arabic and Persian words. Unlike their Afghān neighbours, the Balōches have found difficulties in pronouncing certain of the Arabic letters, so that some of the words taken from that language have been quaintly transformed.

Balōchī has but a small literature, most of which consists of folk-songs, tales, and the like, that have been collected by the late Mr. Dames and other scholars. We have grammars and vocabularies of both dialects, and several books of the Bible have been translated into it. For writing, both an adaptation of the Arab-Persian alphabet and the Roman alphabet are employed. Of all the East Eranian languages, Balōchī is the one that has most conserved archaic forms. Its consonantal system in some respects

stands on the same stage as that of the medieval Pahlavī. According to Professor Geiger, it still preserves unchanged letters which fifteen hundred years ago had begun to lose their original sound in the language which is now modern Persian. In its grammatical inflexions, also, several ancient forms are preserved. East of the Indus, Balōches, still using their native tongue, are found in some Native States as personal retainers and treasure-guards of the chiefs. These are usually Makrānīs. The Indian census does not record nearly all the speakers of the language, as those belonging to Afghanistan and Persia were necessarily omitted from enumeration. As stated above, an estimate for these has been included in the figures of the Survey.

The number of speakers of Ōrmurī is unknown. It is an isolated speech, also called Bargistā or Bargastā from the name of Mir Barak, the Ōrmuri. eponymous ancestor of the tribe, and is the tongue of a few thousand people settled near Kanigoram in Waziristan and in the Logar Valley in Afghanistan, localities outside the census area. Although thus spoken in the heart of Afghanistan, except for borrowed words it has no connexion with the Pashto of the surrounding Wazīrī Pathāns, and though belonging to what we have named (with reservations) the East Eranian group of languages, it seems to me to be perhaps related to Kurdish. The tribe has an impossible tradition that they came from Yaman in Arabia, and that their language was invented for them by a very old and learned man named 'Umar Labān' some four hundred years ago. There are also a good many Ormurs settled in the North-West Frontier Province and in the Bahawalpur State, but they have all abandoned their own tongue. The language does not appear to possess any literature, but the Arab-Persian alphabet as adapted for Pashto has once or twice been employed for writing it.

Paşhtō is spoken in British territory in the trans-Indus districts as far south as

Dera Ismail Khan. Northwards it extends into the Yūsufzai country, Bajaur, Swat, and Buner, and through the Indus Kōhistān at least as far as the river Kandia, where the Indus takes its great turn to the south. In the northern parts of Swat, Buner, and the Kōhistān, many of the inhabitants speak

in their homes languages of Dardic origin, but Paṣḥtō is universal as a means of general intercommunication. In British territory its eastern boundary may roughly be taken as coinciding with the course of the Indus, although there are Paṣḥtō-speaking colonies in the Hazara and Attock Districts, and in Mianwali it is spoken on both banks of the river. After entering the district of Dera Ismail Khan, the eastern boundary gradually slopes away from the Indus, leaving the lower parts of the valley in possession of Lahndā, and some thirty miles south of the town of Chaudhwan it meets Balōchī, and turns to the west. The southern boundary passes south of Quetta and through Shorawak, till it is stopped by the desert of Baluchistan. Thence it follows the eastern and northern limits of the desert, with colonies down the rivers which run south through the waste, to nearly the sixty-first degree of east longitude. It then turns northwards up to about fifty miles south of Herat, where it reaches its limit to the north-west. The northern boundary runs nearly due east up to the Hazara country, in which the

inhabitants do not employ Paṣḥtō but either Persian or a language said to be of Mongolian origin. Skirting the west, south, and east of the Hazara country, and just avoiding the town of Ghazni, it finally goes northwards up to the Hindūkush. Leaving Kafiristan to its east and north, it roughly follows the Kabul River up to Jalalabad, whence it runs up the Kunar so as to include Bajaur and Swat as already stated. In this irregularly shaped area the population is by no means entirely Paṣḥtō-speaking. In British territory the Hindūs speak Lahndā, and in the dominions of His Majesty the King of Afghanistan there is a great admixture of races, including Tājiks, Hazārās, Kizilbāshīs, and Kāfirs, who speak the languages of the countries of their several origins. Roughly speaking, we may say that the country in which the majority of the population use Paṣḥtō as their language is Southern and Eastern Afghanistan, the country to the west of the Indus from its southward bend down to Dera Ismail Khan, and a strip of Northern Baluchistan.

If the identifications of the names are correct, Paṣḥtō speakers have occupied at least a portion of their present seat for more than two thousand five hundred years. They have been compared with the Paktyes of Herodotus, and with the Pakthas of the Vēdas, while the Aparytai of the Father of History are probably represented at the present day by the Afrīdīs, or, as they call themselves, the Aprīdīs. Their subsequent history does not concern us here, and it will suffice to record the fact that they have several times invaded India, that numbers are now settled in that country, where they are known as Paṭhans (a corrupt form of 'Paṣḥṭāna' or 'Paṣḥṭāna'), and that Shēr Shāh, the Emperor of Delhi, was of Afghān origin. Another class of Afghāns comes into India each autumn, and wanders over the country during the cold weather, usually as pedlars or horse-dealers, but sometimes for less reputable pursuits.

Pashto has a literature of respectable extent and possessing works of merit, which are written in a modification of the Persian alphabet. It has received considerable attention from scholars both in India and in Europe. The rugged character of its sounds suits the nature of its speakers and of the mountains that form their home, but they are most inharmonious to the fastidious ears of other oriental lands. I have already2 referred to the traditional Linguistic Survey of King Solomon's days, in which Asaf's specimen of Pashto consisted of the rattling of a stone in a pot, and I may add here a well-known proverb, according to which Arabic is science, Turki is accomplishment, Persian is sugar, Hindőstání is salt, but Pashtő is the braying of an ass! In spite of these unfavourable remarks, though harsh-sounding, it is a strong, virile language, which is capable of expressing any idea with neatness and accuracy. In its general characteristics, it is much less archaic than Balochi, and has borrowed not only a good deal of its vocabulary, but even part of its grammar from Indian sources. As a whole, it is a singularly homogeneous form of speech, although two dialects are recognized, a North-Eastern or Paķhtō, and a South-Western or Paṣhtō. They differ little except in pronunciation, of which the two names are good and typical examples of the respective ways of uttering the same word. Each has several tribal sub-dialects, which also differ only in points of pronunciation. Nothing like the total number of Pashto speakers has been recorded in any Indian census, which was necessarily confined to settled British territory.

All the above is clearly shown in the map facing page 5 of Vol. X of the Survey.

See Note 1 on page 2.

Leaving Afghanistan and passing northwards over Kafiristan and the Chitral

Ghalchah Sub-Group.

Wakhī.

Shighnī.

Ishkāshmī.

Munjānī.

country we come to the <u>Gh</u>alchah sub-group of the Eastern Eranian languages. They are all spoken in or near the <u>Pāmīrs</u>, and are closely connected with each other. They are Wa<u>kh</u>ī, spoken in Wakhan; <u>Shigh</u>nī or <u>Khugnī</u> in Shighnan and Roshan, with its dialect Sarīkolī, spoken in the Taghdumbash <u>Pāmīr</u> and Sarikol; <u>Ishkāsh</u>mī, with

its dialects Sanglichi and Zebaki, spoken in the country round Ishkashm and Zebak; Munjani or Mungi of Munjan, with its dialect Yüdgha; and, according to some authorities, Yaghnobi, spoken some way to the north of the Pāmīrs round the head waters of the Zarafshan river. Of these the only one that immediately concerns us is Yüdghā or Leotkuh-i-war, which has overflowed from the Pamīrs across the ridge of the Hindukush by the Dorah Pass, and is spoken in the 'Ludkho' Valley leading from that pass to Chitral. The others are also heard in Chitral and its neighbourhood, but only in the mouths of visitors. None of them except Yüdghā and some Wakhī spoken by a colony of immigrants which has settled in the Northern Hunza country (Guhyāl) is vernacular in any territory immediately under British influence, and even for these two the Survey has failed to gather any statistics. Our knowledge of Wakhi and of Shighni is mainly based on the researches of Shaw, and Sir Aurel Stein has given us materials regarding Ishkashmi which have been incorporated with the Survey results of my inquiries into Zēbakī in a book published by the Royal Asiatic Society. Of Muniānī and its dialect Yüdghā very little is known. Of the latter General Biddulph has given us a short grammatical sketch and vocabulary, which was the foundation of all subsequent writings till the Survey put further materials for it and a first account of Munjānī at the disposal of students. To the philologist, the <u>Gh</u>alchah languages are of importance. They possess some grammatical forms in common with the Dardic languages to the south, and thus appear to be a link connecting the latter with the Eranian languages.

CHAPTER X.—THE DARDIC, OR PIŚĀCHA, BRANCH.

We have seen above that the speech of those Aryans who remained in Persia developed in the ordinary course into what we have called the Eranian languages, while the speech of those Aryans who advanced into India, and there became isolated, developed at a slower rate, and retained for a longer period the characteristics of the original joint Aryan language. At an early period of the development of the Proto-Eranian language,—i.e. while the speech of the Persian Aryans still retained much of this original Aryan speech, and therefore still possessed much that was common to it and to the Indo-Aryan

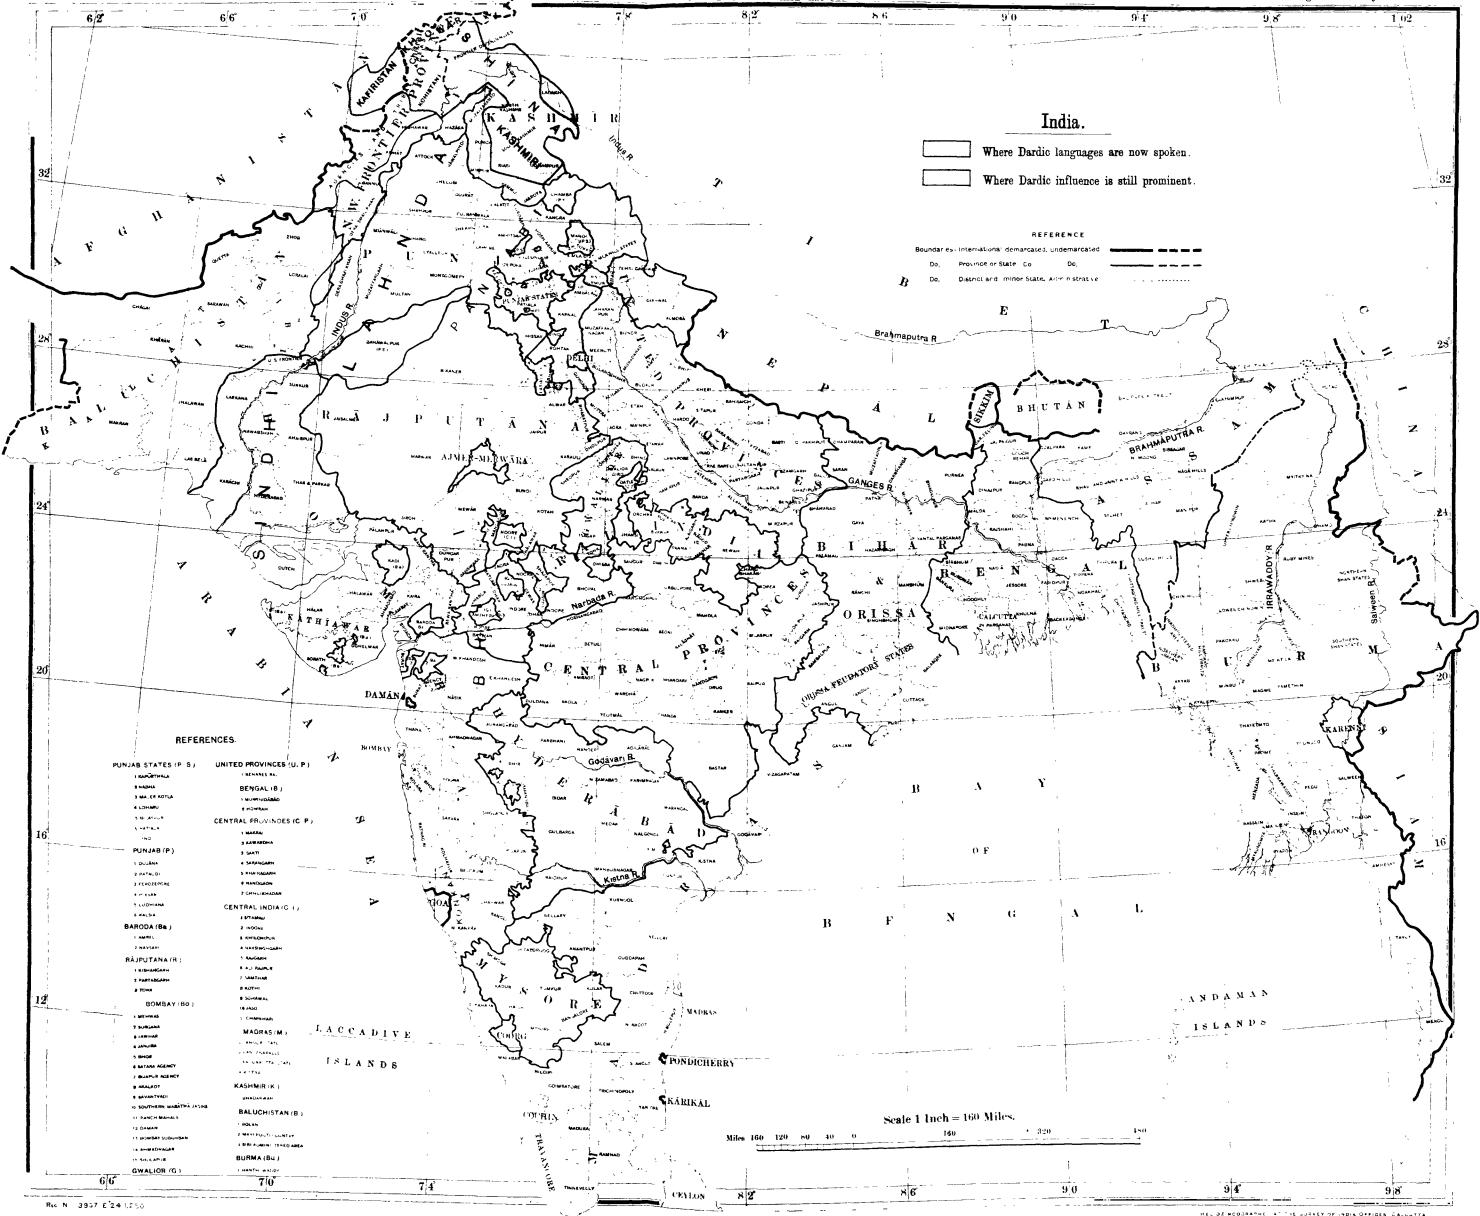

languages,—some of these Persian Aryans migrated east-Route. wards north of the Hindukush, occupied the Pamirs, and thence crossed the Hindukush southwards, in one or more waves, into the country now known as Dardistan. This country appears at that time to have been inhabited by the ancestors of the tribe now found in Hunza-Nagar speaking the non-Aryan Burushaski, who were quite possibly remnants of the old inhabitants of north-western India driven thither by the arrival of the first Indo-Aryan invaders. In this rugged and inhospitable country the speech of the Aryan invaders from the north, influenced, no doubt by the non-Aryan tongue of the previous inhabitants, developed on its own lines,—neither Eranian nor Indian, but something between both. Other later Eranian speakers followed them to the Pamirs and there settled, becoming the ancestors of the speakers of the Ghalchah languages just described. We thus, at the present day, find the Hindukush separating two not distantly related languages, -on the north, in the Pāmīrs, the Ghalchah languages, which are true Eranian, and on the south the semi-Eranian Dardic languages. The linguistic conditions of Dardistan moreover lead us to the conclusion that, in addition to what we may call the original Aryan immigration, there were subsequent Ghalchah invasions into the more accessible tracts, for the Khōwār language of the Chitral Valley,—easily accessible from the Pāmīrs,—has much closer connexion with the Ghalchah languages than have the other Dardic languages spoken in the more inaccessible Gilgit and Kafiristan.

Nomenciature.

Sanskrit literature they are spoken of as 'Dārada' or 'Darada,' which name is often met with not only in geographical works, but also in the epic poems and the Purāṇas. Herodotus refers to them, though not by name, in his famous description of the gold-digging ants (III, 102ff.). They are the Daradrai of Ptolemy, the Derdai of Strabo, the Dardæ of Pliny and Nonnus, and the Dardanoi of Dionysios Periêgêtês. Together with all the other inhabitants of North-Western India they were spoken of by Indian writers as barbarians, or as degraded (nashṭa) Aryans. Their customs were looked upon with abhorrence. Stories were current of cannibalism being rife among them, and, amongst other opprobrious names, they were dubbed 'Piśāchas,' a word which was also used to signify a demon who lived upon raw flesh. Whether Piśācha was really a tribal name, later extended to denote such a demon, or whether the term 'raw-eating demon' was given as a nickname to the tribes inhabiting the Dard country, we cannot say; but we do know that their

Or we may put it another way, avoiding questions of the stage of development; viz., that there were certainly tribal dialects among the original Aryans in Persia, and that some of these dialects tended to develop in the direction of Eranian more than others. The ancestors of the Dards would, in that case, be a tribe, or group of tribes whose dialect, while resembling, was not the same as that of the tribes that migrated directly into India.

DARDISTAN. 109

language was the subject of some study¹, and that Indian grammarians have given us accounts of it under the name of 'Paiśāchī'. For this reason, in the earlier volumes of the Survey, I have given these Dardic forms of speech the collective name of the 'Piśācha Languages', but, as the double connotation of the word 'Piśācha' was liable to give offence, in the later volumes I have abandoned that name, and now call them 'Dardic'.

Dardistan, the present home of the Dardic languages, includes, from East to West, Gilgit and Kashmir, the Indus and Swat Kohistans, Chitral, Dardistan. and Kafiristan. Kafiristan does not fall within British territory, but, for the sake of completeness, an attempt has been made to describe the languages of that country. Dardic forms of speech are also found in other adjoining parts of Afghanistan, - Laghman and Nigrahar, - and Tirāhī, the Dardic language of the last named country, was once spoken in the Tira Valley, now inhabited by Afridi In earlier times, the Dardic languages were much more widely extended. They once covered Baltistan and Western Tibet, where the inhabitants now speak Tibeto-Burman languages.² Philology also shows us that they must once have covered nearly the whole of the Panjab, for Panjābī and Lahndā, the present languages of that province still show traces of the earlier Dardic language that they superseded. Similarly, in western Afghanistan, south of the Afrīdī country, we find relics of Dardic in Örmurī, although, as we have seen, this is itself an Eranian tongue. Dards therefore must have been in Waziristan when the Ormurs first settled there. Further south, the tribe known as Khētrān in the Laghari Hills speak a curious mongrel form of Lahnda mixed with many Dardic forms. Still further south, we find traces of Dardic in Sindhī,—not so much in the literary language as in the rude patois of southern Sind known as Lārī. Turning to the North, the Indo-Aryan languages of the lower Himalaya from Chamba to Nepal show clear traces of Dardic. The Khasas were a Dardic tribe, and they occupied all this tract and influenced its speech³. But this is not all. In the Bhīl languages of western Central India, and even so far south as in the Konkani Marathi of Goa, we find stray peculiarities for which it is difficult to account unless we assume early Dardic in-Finally, it is well known that the Gipsies of Europe and their congeners of Armenia and Syria found their way to their present abodes from India, which they left from the North-West, and it is certain that Romani still retains many forms which can best be explained by a Dardic origin.

The Dardic languages of the present day fall into three groups,—the Kâfir, Khōwar,

The Kāfir group includes four languages spoken in Kafiristan, the Land of the Unbeliever, a mountainous tract lying immediately to the Käfir Group. west of Chitral, in Afghan territory. Here there is no such language as 'Kāfirī,' though it has often been written about.\(^1\) The country is divided up by a number of tribal languages, of which four,—Bashgalī, Wai-alā, Wasī-veri or Veron, and Ashkund are discussed in the Survey. Besides this, there are five other languages closely allied to the true Kāfir languages, but not spoken in Kafiristan itself. These form the Kalasha-Pashai sub-group, and are Kalāshā-Pashai Sub-group. Kalāshā, Gawar-bati or Narsātī, Pashai, Laghmānī or Dēhgānī, Dīrī, and Tirāhī. No statistics are available for any of these. The Bashgal River of Kafiristan takes its rise in the southern face of the Hindukush, and joins the Chitral River near Narsat. Its valley is the home of Bashgali. the Bashgali Käfir language, which is the speech of the Siāh Posh (black raiment) Kāfirs generally. All the tribes who wear the dark-coloured raiment seem at once to understand each other, and to be able to converse fluently and without hesitation. Besides the information collected for the Survey, we have a grammar of this interesting language from the pen of Colonel Davidson.

The Sufed Posh (white raiment) Käfirs occupy the centre and south-east of Kafiristan, and consist of three tribes, the Wai, the Presun or Veron, and the Ashkund.

The language of the Wai is closely related to Bashgalī. It is spoken in the lower valley of the Waigal, a river which takes its rise in the interior of Kafiristan, and, after receiving the Wezgal (in whose valley Wasī-veri is spoken) enters the Kunar near Asmar. The Prēsuns inhabit an inaccessible valley in the heart of the country, to the west of the Bashgal area. Their

wasi-veri. language is called Wasi-veri or Veron, and differs widely from Bashgalī, the speakers of the two languages being mutually unintelligible to each other. Wai and Wasi-veri are described for the first time in the Survey. The specimens of the latter were obtained with considerable difficulty. All that we know about it is based on the language of one wild and frightened Prēsun shepherd, whom the diplomacy of our frontier officers enticed to Chitral. This was interpreted by a Bashgalī Shaikh, who knew a little of his language.

The remaining language, Ashkund, is spoken to the south-west of the tract inhabited by the Prēsuns. We know nothing about it except its name, its locality, and the fact that it is not understood by the other Kāfirs.² All the speakers of this group inhabit countries beyond the frontier of British India,—most of them, indeed, are subjects of His Majesty the King of Afghanistan.

The Kalāshā Kāfirs inhabit the Doab between the Bashgal and Chitral Rivers-They are not 'Kāfirs' in the strict sense of the term, as they have adopted the Musalmān religion, and are subject

One ingenious gentleman has even given a specimen of it in an account of the country. But on examination it turns out to be Amazulu Kāfir of South Africa!

² Since the above was written Dr. Morgenstierne has had an opportunity of examining the Ashkund language when he was in Kabul. He tells me that, while partly resembling Bashgali, on the whole it is most closely related to Wai. In the Journal of the Royal Asiatic Society for 1862, pp. 1 ff., Professor E. Trumpp gave an account of the 'Language of the so-called Kāfirs of the Indian Caucasus'. This is referred to in Vol. VIII, Part ii, p. 31 of the Linguistic Survey, where I stated that the language there described as in some respects resembled Bashgali. Dr. Morgenstierne now informs me that it is essentially identical with one dialect of Ashkund.

KHŌWĀR. 111

to the Chitralis, although the Bashgalis claim them as slaves. Previous to the Linguistic Survey, our only authority regarding the language of this tribe was contained in the works of Dr. Leitner. Lower down the Chitral River, at its junction with the Bashgal, in and about the country of Narsat, dwell the Gawars, who also have a language of their own, known as Gawar-bati, or 'Gawar Gawar-bati. speech, 'of which a vocabulary was given by General Biddulph under the name of Narisati. Further east lies the territory of the Nawab of Dir. Here, in the year 1838, Leech discovered a language called Diri. Diri, of which he published a short list of words. Since then it appears to have died out, either being superseded by Pashto or becoming merged into the neighbouring Garwi of the Swat Kohistan. Lower down the Chitral River, which has now become the Kunar, on its right bank, dwell the Pashai. Pashai. Previous to the Survey, the only information which had been available regarding their language had been based on short lists of words collected by Burnes and Leech. Pashai, properly speaking, is the speech of the Dehgans of Laghman and of the country to the east of it as far as the Kunar. It is also called Laghmani, from the tract where it is spoken (the abode of the Lambagai of Ptolemy) and Dehgani, because most of its speakers belong to the Dehgan tribe. The boundaries of the language are said to be, roughly, on the west the Laghman River, on the north the boundary of the Kafirs, on the east the Kunar River, and on the south the Kabul River, although the riverain villages on the left bank of the Kabul speak Pashto. has two well-marked dialects, an eastern and a western. South of Pashai, across the Kabul, in the Nigrahar country we find Tirahi spoken by a Tirāhi. tribe which as the result of a feud abandoned its original home in the Tirā (commonly spelt Tirah) Valley. The people have a bad reputation among their neighbours, and habitually deny their origin to outsiders. Leech, in 1838, succeeded in collecting a few of their words, and all the resources of the Survey failed to obtain any further information. After the Survey was concluded, thanks to the ever kind help of Sir Aurel Stein, I have become possessed of sufficient materials to give a brief account of this form of speech, which is published in the supplement. Here it is sufficient to say that these materials show clearly that Tirāhī is closely connected with Pashai and Gawar-bati. The presence of these two Dardic languages in the heart of Afghanistan is of more than ordinary interest to the ethnologist and the

Khōwār is the language of the Khōs, the most important tribe of the State of Chitral. On its west it has the Kāfir languages, and on its east the Shiṇā spoken in Gilgit and the neighbourhood. This last belongs to the Dard Group, and it is to be noted that the Kāfir and Dard groups are much more nearly related to each other than either is to Khōwār. On the other hand Khōwār shows traces of connexion with the Ghalchah languages spoken north of the Pāmīrs which are wanting in the other two groups. It thus resembles a somewhat alien wedge inserted between the other two groups and thrusting them apart, coming into the country subsequently to the other two after it had developed some of the Ghalchah characteristics. This is borne out by the traditions of the Khōs themselves, which point to a later immigration. In spite however of its somewhat independent character, Khōwār is nowadays certainly a Dardic language, and

philologist.

cannot, like the Ghalchah languages, be classed as Eranian. It is also called Chatrārī, a word usually pronounced 'Chitrali' by Europeans. It is the principal language of Chitral and of that part of Yasin called 'Arinah' by the Shins. From the latter word the language was called Arnyiá by Dr. Leitner. It extends down the Chitral River as far as Drosh, and is bounded on the north by the Hindukush. No dialects have been recorded. Leitner, Biddulph, and O'Brien are our principal authorities for this language.

The word 'Dard' properly belongs to the tribes immediately to the north of Kashmir, but has in modern times been extended to include all the inhabitants of Dardistan. I have followed this by giving the term 'Dardic' to all the languages of Dardistan, while I reserve 'Dard' for its proper use as indicating the group of languages of eastern Dardistan, viz., Shinā, Kāshmīrī, and Kôhistānī. Shinā is the

language of the Gilgit Valley, and of the Indus Valley from Baltistan to the River Tangir. It also extends to the south-east of the last-named river, and occupies a large block of mountain country between Baltistan and the Valley of Kashmir. It is thus spoken in the original Dard country, and is far the purest language of the group. As explained on page 109, in former times it extended far beyond its present boundaries and covered Baltistan and Western Tibet, where it has now been superseded by Tibeto-Burman dialects. It has several well-defined dialects, the most important being Gilgitī of the Gilgit Valley. Besides the dialects spoken in the Shina country proper there are also dialects called by the Baltis 'Brokpa' or 'Highlanders speech.' Brokpā of Dras, which differs little from the Shinā spoken in Gurez, the Brokpā of Skardu which is the same as the Shina of Astor, and the curious isolated colony of Shiṇā, spoken near the frontier line between Baltistan and Ladakh, called the Brokpā of Dah and Hanu, which is a relic of the Dard language once spoken still further east. This dialect, spoken in the heart of a Tibetan-speaking country, far from the Dard country proper, differs so widely from the other two Brokpas, that the respective speakers are unintelligible to each other, and have to use the Tibetan Baltī as a means of intercommunication. Shina has been written about by several authorities, of whom the earliest are Leitner and Biddulph. Since then, it has been very fully dealt with by Colonel Lorimer and Dr. Grahame Bailey. The Dah-Hanu dialect has been described by Shaw.

Kāshmīrī has its home in the Valley of Kashmir and the contiguous valleys to its south and east. Beyond these limits it is not used as a Kāshmīrī. national language. In the Panjab it is spoken by immigrants, either Pandits or colonies of weavers or of carpenters. There is also a small settlement in the United Provinces which is permanent, and consists principally of educated Hindus. Kāshmīrī is a mixed form of speech. Its base is a Dard language closely akin to Shina, and many of its commonest words, not to mention its complicated system of pronunciation, are certainly of Dardie origin. But the Happy Valley has received numerous immigrants from India proper; for centuries it has been one of the most celebrated homes of Sanskrit study, and its indigenous literature has grown up KÕHISTÄNĪ. 113

under the influence of Sanskrit models. It thus, to a casual observer, and inder d to the learned Kāshmīrīs themselves, presents the appearance of a language as truly bulian as Marāthī or Hindostānī. Moreover all the civilization of the country has come from India and it is the only language of Dardistan that has received literary cultivation. No one has a higher appreciation of the learning and genius which have adorned Kashmir from very early times than the present writer. It has legends that the Valley received its population from India, and this is very probably true so far as regards the upper classes, but that the Kashmiri language has a Dardic basis is a matter of which no philologist can have any doubt. Kāshmīrī has been studied for the past thirty years, and we have now a complete grammar, and a dictionary is in progress of compilation. To the philologist it is of great interest, for we see in it a language which is, so to speak, caught in the act of transforming itself from the analytic to the synthetic stage. Owing to the extensive use of epenthesis, its pronunciation is as difficult to foreigners as English is, and it possesses many broken vowel sounds that are not easily reduced to Besides slight variations in the Valley itself, it has one distinct dialect, writing. Kashtawari spoken in Kishtwar to the south-east of the Valley proper. South of the Valley there are also three or four mixed dialects leading into Panjabi. A more import-

ant division is that into the Kashmiri of the Musalmans Kāshmīrī. Survey. (who are many, and uneducated) and that of the Hindus 1.039,964 Standard . (who are few and educated). Musalmánī Kāshmīrī abounds 7,464 Kashţawāŗī in foreign words borrowed from Persian, often in distorted 45,316 Mixed Dialects . Unspecified 103,158 forms. Hindu Kāshmīrī is very free from admixture with Persian, and, although the home language of Pandits, is $1,\!195,\!902$ singularly free from Tatsamas. Most of its copious vocabulary is composed of honest Tadbhavas¹.

Most of the literature of Kashmir is written in Sanskrit, and is deservedly famous. A few works, including a remarkable series of Saiva verses by an old poeters named Lal Ded, a Rāmāyaṇa, and a history of Kṛishṇa, have been written in Kāshnūrī itself. It has two alphabets,—a modification of the Persian used by Musalmāns, and the ancient Sāradā alphabet akin to Nāgarī, which is still used by Hindūs. The Serampur Missionaries published a Kāshnūrī version of the Scriptures in the Śāradā character early in the last century. Modern translations have been in the Persian script.

The River Indus, after leaving Baltistan, flows pretty nearly due west through the Chilas country, till it receives the River Kandia, which takes its rise not far to the north in the maze of mountains between Chilas and Chitral. From this point to its entry into British territory, the Indus runs in a southerly direction through groups of hills known collectively as the Indus Köhistän, and inhabited by a number of wild tribes who all speak varieties of a Dard language allied to Shina, but mixed with Lahadā and Paṣḥtō, which is called Indus-Kōhistānī or Maiyā. To the west of the Indus Kōhistān lie in order the valleys of the Swat,

Panjkora, and Kunar rivers. Those of the first two are known as the Swat and as the Panjkora Köhistans respectively. Here the language of the bulk of the people was formerly a Dard dialect allied to Maiya, but is now, owing to Pathan domination,

¹ Regarding the terms 'Tatsama' and 'Tadbhava,' see p. 127, below.

almost invariably Paṣḥtō. Only a faithful few still cling to their ancient language, though they have abandoned their Aryan religion, and the dialects they speak are known as Gārwī and Tōrwālī. The tribes who speak these Kōhistānī dialects have never been famous for devotion to the politer arts, and Kōhistānī has no literature of any kind. No statistics are available as to the number of speakers.

CHAPTER XI.—INDO-ARYAN BRANCH. INTRODUCTORY.

We have seen above that the Aryans reached Persia as a united people, and that at an early period, before their language had developed into Eranian, some of them had continued their eastern progress into India. We are not to The gradual immigration. suppose that this took place all at once, in one incursion. Wave after wave advanced, the people first establishing themselves in Afghanistan, and thence, in further waves, entering India through the Kabul Valley. We see traces of this gradual advance in the Vedas themselves. If Professor Hillebrandt² is right in his conclusion, the tribe over which King Divodasa ruled inhabited Arachosia (Kandahar), while under his descendant Sudas its members are found on the Indus, and have already turned into legend the martial exploits of his ancestor. This is a thing for which generations are required. It will readily be understood, therefore, that at the earliest period at which we have any cognizance of India the Panjab was in the possession of a number of Indo-Aryan tribes, not necessarily on good terms with each other, and sometimes speaking different dialects. As each new tribal wave came from the west, it pushed the earlier settlers before it or to one side, or else went round them.

The earliest documents that we possess to illustrate the language used by the Indo-Aryans of this period are contained in the Vedas, although Earliest documents. we know that they still worshipped some gods by the same names as those which were known to their Aryan ancestors while yet in the Manda country. The hymns forming the collection known as the Vedas were composed at widely different times and in widely different localities, some in Arachosia³, in what is now Afghanistan, and some in the country near the Jamna; but owing to their having undergone a process of editing by those who compiled them into their present arrangement, they now show few easily recognizable traces of dialectic differences. Attempts, it is true, have been made to discover such, but they are

Evidence of early dialects. of small importance compared with the fact that dialects appear to be mentioned in the hymns as in actual existence.

¹ This is the usually accepted account. At the time of writing, Mr. Pargiter, in his Ancient Indian Historical Tradition, has put forward a new and somewhat startling theory that the Aryans entered India, not through the North-West Frontier, but through the Mid-Himalayan region. This is a proposition that will certainly demand considerable West Frontier, but through the Mai-Himanayan region. This is a proposition that will certainly definant considerable discussion,—which it has not yet received,—before it can be finally decided one way or the other. It is primarily a question for ethnologists and historians rather than for philologists, and therefore, without venturing to prejudge the question. I here fellow the account of the Indo-Aryan invasion of India which has hitherto been generally accepted. See also Note 1 on p. 117.

2 Vedrsche Mythologie, I, 107, etc. Cf. also his Aus Alt- und Newindian, pp. 7ff.

3 Professor Hertel maintains that the older hymns of the Rig Vēda were even composed in Persia, before the migration of the Aryans into India, and that they were sacred hymns of the Aryans before the great split. See Das Brahman in India, and that they were sacred hymns of the Aryans before the great split. See Das Brahman in

^{*}Protessor Hertel maintains that the older hymns of the Rig Vēda were even composed in Persia, before the migration of the Aryans into India, and that they were sacred hymns of the Aryans before the great split. See 'Das Brahman' in Indogermanische Forschungen, XLI, p. 188. This is quite possible, and agrees with the discovery of the names of Aryan (Manda) gods in Mitanni (see p. 97 above).

4 The language of the hymns, as we have them now, is necessarily that of the time when the text was fixed by the editors, or a little more antiquated. Before that they had been handed down by word of mouth from generation to generation, and, as time went on, each generation, without being aware of the fact, had slightly altered the sounds of the language. The change from the language of one generation to that of the next was very slight, but the sum of the changes over several hundred years must have been considerable. Even if we admit that the sacred character of the hymns tended to conservatism, and, more especially, to preserve unchanged particular words which were either specially holy or which had become unintelligible the original language in which the eldest hymns were composed must have been very different from, and in a much older stage of development than, even the antique mould in which they have been preserved. On this point, compare Professor II. Oldenberg's Die Hymnen des Rigierla. Vol. I, pp. 370 ff., Professor Wackernagel's Altindische Grammatik, I. p. X, and W. Petersen's article "Vedic, Sanskrit, and Prakrit", in the Journal of the American Oriental Society, XXXII (1912), p. 419. We have a striking panallel in the hymns of the Kashmir poetess. Lal Déd, who composed her hymns in the 14th century A. D. These have been carefully preserved as sacred songs by generations of professional reciters, but, during the five hundred years that have elapsed since their composition, they have been handed down to us only by word of mouth. The result is that, as we now have them, they, sacred as they are, are in modern Kās

While it is impossible to discriminate between each successive wave of these Theory of earlier and later migrations it is easiest to distinguish between the earliest and the latest. In the year 1880 Hoernle¹ suggested that the migrations. evidence of the modern vernaculars of India and their predecessors justified the idea of there having been two Indo-Aryan invasions of India, one preceding the other, by tribes speaking different but closely connected languages. I am not prepared myself to accept this theory2 of that great scholar in all its details, as it seems to me to be unnecessary to explain the difference of language by postulating two distinct invasions. It is easier to explain it by what is an undoubted fact,—that the invasion or, if we prefer the term, the immigration, was a gradual process extending over a very long period of time. Whether we distinguish between the languages of two separate invasions, or between the languages of the earliest and of the latest immigrants, the result is the same. The earliest comers spoke one dialect, and the new comers another. Hoernle, however went further. He looked upon the second invaders as entering the Panjab like a wedge, into the heart of a country already occupied by the first immigrants, and forcing the latter outwards in three directions, to the east, to the south, and backwards to the west. again, while not denving it, I am not prepared, in our present state of knowledge, to accept this 'wedge-theory' as necessarily correct. It is equally possible that the latest comers may have found their way opposed and have gone round their predecessors, down the Indus Valley, and thence, in later times, across India to their south and ultimately behind them on the east. In either case the political result would be very similar. There would be a central people surrounded on the west, south, and east, by another. If the wedge theory is correct, it would be the central people, and if it is not, it would be the outer people who would be the latest arrivals. The political state of affairs is borne out by Indian tradition. In the Vēdas themselves we have records of wars between king Sudas, whose kingdom lay to the west,--on the Indus,--and the Bharatas. against the Purus, an Aryan tribe which his poet called mridhravāch, i.e., speaking a barbaric tongue³, far to his east in the neighbourhood of the Ravi and the Jamna; and the contest between the rival priest-poets of the Sarasvatī and of the Indus forms one of the best known episodes of that collection. Similarly, the great Bharata war, between the Kurus and the Panchalas gives us hints of much value. Since Lassen's time it has been recognized that the latter were older settlers than the former. Speaking very roughly, they occupied the country to the east of the upper course of the Ganges and the central Doab, or the heart of what in after years was called the 'Madhyadesa' or 'Midland'. Putting accidental alliances to one side, this war, as Mr. Pargiter has well shown, was from the broadest point of view a war between Panchala and the south of the Midland on the one side against the rest of India, to their west, south, and east, on the other. The chief allies of the Panchalas were the Pandavas, a mountain tribe, who practised polyandry and were on friendly terms with other clans that dwelt in the Himalava. Nay, Lassen goes even further, and maintains that so long had the Panchalas

Comparative Grammar of the Gaudian Languages, p. XXXI.

^{&#}x27;I am compelled to state this clearly, because my name has more than once been associated with Hoernle's as a thorough supporter of his argument. In fact it has even been called 'Hoernle and Grierson's two-invasion theory.' While fully admitting my indebtedness to Hoernle's deductions, I have always been of opinion that it is not necessary to postulate two distinct invasions.

³ So translated by Professor Hillebrandt, Vedische Mythologie, I, 90, 114. See Rig Veda, VII, xviii, 13.

^{*} See J. R. A. S. 1908, pp. 333 and 502.

THE MIDLAND.

preceded the Kurus that their complexion had been altered by the Indian climate, and that the war was really between a dark and a fair-complexioned race. The Mahābhārata itself, which, as we now have it, is an epic written in praise of the Pāṇḍavas, calls tribes settled on the Indus, which were undoubtedly Aryan, by the opprobrious name of 'Mlēchchha', thus denying them even their common Aryanhood. Many similar items could be taken from the same work did space permit'.

It is reasonable to suppose that the central group of tribes should have expanded as time went on, and should have thrust out in each direction The 'Midland'. the tribes that surrounded them. The only alternative would have been extinction. In mediæval Sanskrit geography we find one tract of country continually referred to as the true, pure, home of the Indo-Aryan people. The name given to it, Madhyadēśa or 'Mid-land', is noteworthy in this connexion. It extended from the Himalaya on the north to the Vindhya Hills on the south, and from what is now Sirhind (properly 'Sahrind') on the west to the confluence of the Ganges and the Jamna on the east. According to legend, from end to end of this Mid-land, there ran, unseen to men, the holy stream of the Sarasvati, on whose bank, in Vedic times, was the principal seat of these central tribes. Inner and Outer Sub-branches. modern Indo-Aryan vernaculars fall at once into two main sub-branches, one spoken in a compact tract of country almost exactly corresponding to this ancient Madhyadeśa, and the other surrounding it in three quarters of a circle beginning in Hazara in the Panjab, and running through the Western Panjab, Sindh, the Maratha country, Central India, Orissa, Bihar, Bengal and Assam. Gujarat we know to have been conquered from Mathura (which was in the Madhyadeśa), and this is the only part of India in which we find at the present day that the Inner sub-branch has burst through the retaining wall of the outer.

Between these two sub-branches there is a remarkable series of antithetic facts.

In pronunciation they are sharply opposed; each has preferences which will at once occur to every philologist. The most remarkable difference is in the treatment of the sibilants, which has existed since the time of Herodotus. The inner sub-branch hardens them; every sibilant is pronounced as a hard dental s. The outer languages (like those of the Eranian branch) seem, almost without exception, to be unable to pronounce an s clearly. In Persia the Greeks found an s pronounced as h or even dropped altogether. The representation of the river 'Sindhu' by 'Indus' is a familiar example. In the

It has been suggested more than once that the later immigrants need not necessarily have entered India by the same route as that followed by their predecessors. Dr. Spooner (J. R. A. S. 1915, pp. 426, 430) has proposed that they were ancient Magians, who came by sea to Gujarat and thence spread over the south of the Midland and over eastern India. Mr. Pargiter (Ancient Indian Historical Tradition, pp. 295ff.), taking a much wider view, maintains that the Aryans, as a whole, entered India over the central Himalaya, and not at all by the north-west. As I have said above (p. 115, note) this is a theory which has not yet been discussed, and on which it would be premature to base any philological conclusions; but, even at the present stage, it may be admitted that it is not impossible that the tribes represented in the Bhārata war by the Pāūchālas and their allies, from their locality, may have represented an immigration independent of a main immigration by the north-west. The latter would, in that case, represent the ancestors of the speakers of the medern outer languages. It is equally not impossible that the outer tribes may have come over the Hindūkush by the same reate as that followed by the ancestors of the Dardic tribes and may have formed a kind of vanguard of the latter which spead west, south, and east round the Aryan tribes whom they found settled in the Panjab and beyond. But at present these are all suppositions, and no decisive proof can be offered for any of them; though it must be admitted that the languages of the modern representatives of the outer tribes show points of resemblance with Dardic languages which are wanting in the languages of the descendants of the central tribes. On this last point, see Hillebrandt, Aus Alt- und Neuindien, p. 11.

east the old Prakrit grammarians found s softened to sh. At the present day we find the same shibboleth of nationality; in Bengal and part of the Marāṭhā country s is weakened to sh, and in Eastern Bengal and Assam it is softened till its pronunciation approaches that of a German ch. On the other hand, on the North-Western Frontier and in Kashmir, it has become an h, pure and simple.¹

The declension of nouns there are also differences. The Inner sub-branch is, in the main, a set of languages which are in the analytic stage.

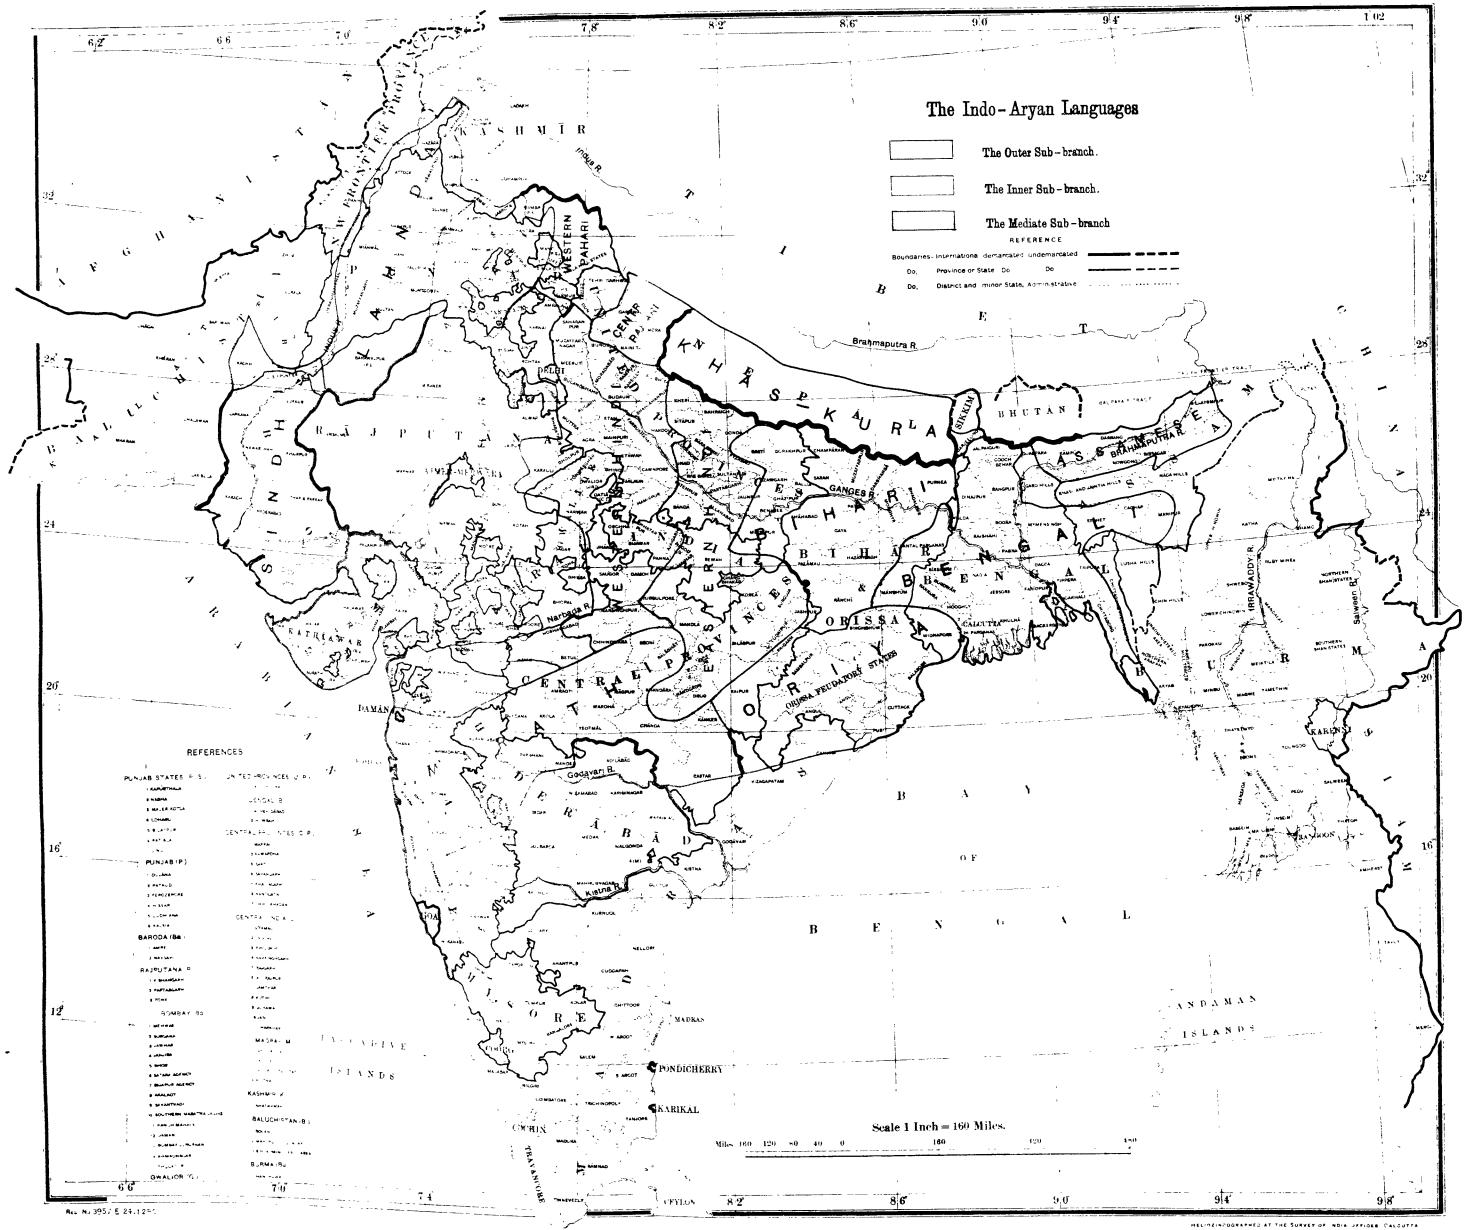

The original inflexions have mostly disappeared, and grammatical needs are supplied by the addition of auxiliary words which have not yet become parts of the main words to which they are attached. Familiar examples are the case suffixes, $k\bar{a}$, $k\bar{o}$, $s\bar{e}$, etc. of Hindī. The languages of the Outer sub-branch have gone a stage further in linguistic evolution. They were once, in their old Sanskrit form, synthetic; then they passed through an analytic stage—some are passing out of that stage only now, and are, like Sindhī and Kāshmīrī, so to speak, caught in the act,—and have again become synthetic by the incorporation of the auxiliary words, used in the analytic stage, with the main words to which they are attached. The Bengali termination of the genitive, $-\bar{e}r$, is a good example.

The conjugation of the verb offers very similar peculiarities. Here, however, it is necessary to go into greater detail. Broadly speaking, Conjugation. two tenses and three participles of Old Sanskrit have survived to modern times. These are the present and future tenses and the present active and past and future passive participles. The Old Sanskrit past tense has disappeared altogether. The old present tense has survived in every modern language, and, allowing for phonetic growth, is the same in form everywhere, although its meaning has frequently changed; for instance, in Kāshmīrī it has become a future indicative, and in Hindī it is generally used where we should employ a present subjunctive. The old future has survived, but only here and there, and principally in western India. the modern languages use instead a periphrasis based on the Old Sanskrit future passive participle, and when they wish to say 'I shall strike', their speakers really say, without knowing it, 'it is to be struck by me'. The original past tense has universally disappeared and all the modern languages employ in its place a similar periphrastic form based on the old past participle passive. Instead of saying 'I struck him', they all, without exception, say 'he (was) struck by me'. Here it is that we see the great contrast in the treatment of the verb between the inner and the outer families. It will be noticed that in the tenses formed from passive participles, the subject of the verb, 'I' has been put into the ablative, or, as it is in these circumstances called, the agent case. 'I' has become 'by me'. Now in the old Sanskrit, 'by me' could be represented in two ways 2 . We could say $may\bar{a}$, which was a separate distinct word, or we could employ the syllable $m\bar{e}$, which could not stand by itself, but could only be attached enclitically to a preceding word. In just the same way there was a twofold

It may be objected that this weakening of s is due to different causes in different languages. So it is, but the same causes were in operation in the Midland, and there had not this result. In other words, the Outer languages did not defend their sibilants, while the Inner languages did.

² Sanskrit scholars will recognize that this is not literally true, as, according to the grammarians, the enclitic me belonged to the dative and genitive, not to the instrumental. They will also recognize that owing to the interchange of case-forms which took place at an early stage in the linguistic history of India, the point is of no importance. Compare Pischel in ZDMG. xxxv (1881), p. 714.

series of enclitic and non-enclitic forms for the second personal pronoun, and for both in both numbers. These enclitic pronouns are familiar to Europeans. In Latin, 'give to me' was 'date mihi'; in Italian, it is 'datemi', in which mi is an enclitic pronoun. Similarly we have an enclitic pronoun when Mr. Punch makes a tipsy man say 'gimme' for 'give me'. Now the modern Indo-Aryan languages show most clearly that the Outer sub-branch is derived from a dialect or dialects of the Old Sanskrit which freely used these enclitic pronouns with passive participles, while the Inner is descended from a dialect or dialects which did not use them in such cases. The result is that in the Inner sub-branch the bare participles are used for every person without change of form, -mārā means alike 'I struck', 'thou struckest,' 'he struck', 'we struck', 'you struck' and 'they struck',-while in the Outer, the enclitic pronouns have generally become permanently fixed to the participle, and have developed into personal terminations like what we have in Latin and Greek. In these languages, 'I struck', 'thou struckest', 'he struck', and so on, are all different words, each of which tells by its termination who This important distinction is at the bottom of the altogether different the striker was. appearances which the two sub-branches present. The grammar of each of the Inner languages can be written on a few leaves, while, in order to acquire an acquaintance with one of the Outer languages, page after page of more or less complicated declensions and conjugations must be mastered.

The limits of these two sub-branches of the Indo-Aryan languages may be defined as Geographical position of follows: -- The Inner sub-branch is bounded on the north by Inner languages. the Himalaya, on the west by, roughly speaking, the Jhelum, and on the east by the degree of longitude which passes through Benares. The western and eastern boundaries are widely apart and include a good deal of debatable ground in which the two families meet and overlap. If these limits are narrowed so as to include only the purer languages of the Inner sub-branch, the western boundary must be placed at about the meridian of Sirhind in Patiala, and the eastern at about the meridian Between Sirhind and the Jhelum the language of Allahabad in the United Provinces. is Panjabi, which contains many forms, increasing as we go westwards, for which the only explanation is that west of Sirhind, or, we may say, to the west of the Sarasvatī, the country was originally inhabited by tribes partly Dardic, and partly belonging to the Outer family (if the two are not different ways of saying the same thing), who were conquered and absorbed by members of the Inner, whose language gradually superseded theirs, just as Hindəstəni is now superseding Pañjābī. Pañjābī is one of the Inner languages, but it contains many forms which have survived either from Dardie or from an Outer dialect. Between Allahabad and Benares, or, in other words, in Oudh, Baghelkhand, and the Chattisgarh country, the language is Eastern Hindi, which is an intermediate form of speech, possessing the characteristics of both sub-branches. To the south, the boundary of the Inner sub-branch is well defined, and may roughly be taken as corresponding to the southern watershed of the Narbada River. On the west, the sub-branch merges into the Outer Sindhi through Rajasthani, and into Lahnda (also Outer) through Panjabi. As stated above, it has burst through the retaining wall of Outer languages and reached the sea in Gujarat, though Gujarāti, the language of the last-named country, still shows traces of the old Outer language which it has superseded. The remaining Indo-Aryan languages belong to the Outer sub-branch.

Taking the Indo-Aryan languages as a whole, they fall into the following groups:—A

Resultant grouping of the modern Indo-Aryan Vernaculars.

North-Western, a Southern, and an Eastern (belonging to the Outer Sub-branch); a Mediate Sub-branch (intermediate between the Outer and the Inner); and a Central and a Pahāṛī (belonging to the Inner Sub-branch). We thus arrive at the following list of languages with the number of speakers of each:—

Of the above, Marāṭhī and Eastern Hindī are groups of dialects, not of languages. The languages of the Pahāṇī Group are those spoken in the lower Himalaya. Eastern Pahāṇī or Naipālī is called Khas-Kurā by those who speak it. Central Pahāṇī includes the hill dialects spoken round Naini Tal and Musscorie. They are Kumaunī and Gaṛhwālī. Western Pahāṇī means the group of dialects spoken in the hills north of the Panjab, such as Jaunsārī, Sirmaurī, Kiū̄ṭhalī, Kuļuhī, and Chamēāļī.

The total number of speakers of Indo-Aryan languages is considerably more than half that of the estimated population of Europe (400,000,000).

¹ In the Census, many speakers of Lahndā are shown under Panjābi.

² These figures are adjusted estimates. In the Census returns, nearly all the speakers of Bihārī and Eastern Hindly are shown as speaking Western Hindly the unadjusted Census figures being.—

[?] This includes many speakers of Lahnda.

^{*} In the Census, most of the speakers of Central Pahārī are shown as speaking Hindi.

CHAPTER XII.—THE DEVELOPMENT OF THE INDO-ARYAN LANGUAGES.

As stated above, the earliest specimens of the actual Aryan vernaculars of India are to be found in the hymns of the Rig Vēda. Most of these bymns were undoubtedly originally composed in the actual spoken language of their authors, a natural, unartificial language, as compared with the more artificial language subsequently developed in Brahmanical schools and called Classical Sanskrit. Although they have been edited, so as to obscure dialectic peculiarities, by the Brāhmans who compiled them into one collection, these hymns furnish invaluable evidence as to what was the house-language of the earliest Aryan inhabitants of India.

From the inscriptions of Asōka (circ. 250 B. c.) and from the writings of the grammarian Patañjali (circ. 150 B. c.), we learn that by the third century before our era an Aryan speech (in several dialects) was employed in the north of India, and, having gradually developed from the ancient vernaculars spoken during the period in which the Vedic hymns were composed, was the ordinary language of mutual intercourse. Parallel with it, the so-called Classical Sanskrit had developed, from one of these dialects, under the influence of the Brāhmans as a secondary language, and had achieved a position much the same as that of the Latin of the Middle Ages. For centuries the Aryan vernacular language of India has been called Prakrit, prākrita, i. e., the natural, unartificial language, as opposed to Sanskrit, saṃskrita, the polished, artificial, language. From this definition of the term 'Prakrit', it follows that the vernacular dialects of the period of the Vedic Hymns, as compared with the comparatively artificial saṃskrita language of these hymns as they have been preserved by the Brāhmans who compiled them, were essentially

Prakrits, and as such they may be called the *Primary Prakrits*.

Prakrits of India. The vernaculars which developed from them and which continued developing, alongside of the Sanskrit whose growth was arrested by the grammarians of the Brahmanical schools, until they became the modern

Secondary Prakrits.

Sanskritic Indo-Aryan vernaculars, may be called the Secondary Prakrits; while the final development, these modern vernaculars themselves, as they have existed for the past nine hundred years, may be called Tertiary Prakrits. It is with these Tertiary Prakrits that we are immediately concerned.

Border line between each

It stands to reason that no distinct border line can be drawn between the Primary Prakrits² and the Secondary Prakrits, or between the Secondary Prakrits and the Tertiary.

We have no positive information regarding the earliest condition of the Secondary Prakrits. They appear to us first in their vigorous youth in the Asōka inscriptions. We know, on the other hand, that the change from the Secondary Prakrits to the Tertiary

VOL. I, PART I.

¹ M1. Petersen in 'Vedic, Sanskrit, and Prakrit' (JAOS. XXXII (1912), pp. 423ff) maintains that the Prakrits represent Sanskrit as mispronounced by the enslaved aborigines of India, and compares this with the Negro English of the Southern States of America, and with the mispronunciation of children. The suggestion is fascinating, but I am unable to accept it. The change from Sanskrit to Prakrit is so clear an example of regular linguistic development, and is paralleled so exactly by the change of Latin to the Romance languages, that I cannot conceive the necessity of any other explanation. Of course it is quite possible that the broken Sanskrit of the aborigines may have I ad some influence, but it cannot, in my opinion, have been the cause of the development.

² It is quite certain that, even during the Vedic period, the vernaculars in actual use already contained many words in the same stage of development as Pāli, which is a Secondary Prakrit.

was, as might be expected, so gradual that, at or about the approximate border line, it is impossible to state whether the language belongs to the Secondary or Tertiary stage. At the same time there is no difficulty in recognizing the main distinctive peculiarities of each group. In the primary stage the language is synthetic and has no objection to harsh combinations of consonants. In the secondary stage the language is still synthetic, but diphthongs and harsh combinations of consonants are eschewed, so much so that, in its latest artificial literary developments, it arrives at a condition of almost absolute fluidity, becoming a mere collection of vowels hanging for support on an occasional consonant.

Characteristics of Tertiary

This weakness brought its own Nemesis, and in the tertiary stage we find the hiatus of contiguous vowels abolished by the creation of new diphthongs, declensional and conjugational

terminations, consisting merely of vowels, worn away, and a new kind of language coming into existence, no longer synthetic, but analytic, and again reverting to combinations of consonants under new forms, which three thousand years ago had existed, but which two thousand years of attrition had worn away. Nay more, in some of the modern vernaculars, mainly those which I have called the 'Outer' ones, we see the analytic form of language again disappearing, and being replaced by a new synthetic form of language, similar in its course of development to that of the Indo-European *Ursprache* of the pastoral tribes in Central Europe or Siberia.

As to whether the very earliest form of the Secondary Prakrit language had any dialects we are not in a position to say positively, but, as Secondary Dialects we know that there were dialects in the Vedic times, there is Prakrit. every reason to believe that it possessed them too. It covered a wide extent of country, from the Indus to the Kosi, and it would be surprising if there were no local variations of speech. Moreover, two hundred and fifty years before Christ. we find the edicts of Asoka written in this language, and here Pāli stage. we see that the then existing Aryan vernacular of India did contain at least two main dialects, a Western and an Eastern Prakrit. The particular stage of their development at which the Secondary Prakrit had by this time arrived, was crystallized by the influence of Buddhism, which used it for its sacred books. It is now known as the Pali language. As a vernacular it, however, continued its course of development, and, in later stages in various dialects, is known Stage of Prakrit par excelas the Prakrit par excellence. When we talk of Prakrits. we usually mean this later stage of the Secondary Prakrits,

These Prakrits became, in later times and under the influence of religious and political cal causes, the subject of literary study. Poems and religious works were written in them, and they were freely used in the drama. We have grammars of them written by contemporaries or by men who lived only a short time after they had become dead languages. It may be taken as a convenient date for fixing the memory, that these Prakrits were dead languages by, in round numbers, 1000 A.D. All that we know about them is founded on the literature in

when they had developed beyond the stage of Pali, and before they had arrived at the

analytic stage of the modern Indo-Aryan vernaculars.

which they have survived, and in the grammars written to illustrate that literature. Unfortunately we cannot accept this literature as illustrating the actual vernaculars on which it was founded. To adapt them to literary purposes the writers altered them in important particulars, omitting what they considered vulgar, reducing wild luxuriance to classical uniformity, and thus creating altogether artificial products suited for that artificial literature which has ever been so popular in India. These literary Prakrits cannot, therefore, be considered as representing the actual speech of the people at any epoch, although they are based upon it, and a veil is drawn by them between us and it which it is not always easy to lift. We are able, however, to distinguish (as in the

Asôka Inscriptions) that there was a Western Prakrit and Western Prakrit. Eastern Prakrit, each possessing distinctly marked Eastern Prakrit. characteristics. The principal form of the Western was called Saurasēnī, the language of Surasena or the middle Gangetic Doab and its neighbourhood, and of the Eastern, Māgadhī or the language of Magadha, the present South Bihar. Between these two there was a kind of neutral ground, the language of which was called Ardha-māgadhī, or Half-Magadhi, which partook of the nature of both languages. Its western boundary was somewhere near the present Allahabad, but we cannot say certainly how far east it extended. According to tradition, it was the language in which Mahavira, the Jain apostle, preached (he belonged to this side of India), and a language based on it was used in the older Jain scriptures. Closely connected with it, but leaning rather to the Eastern than to the Western, was the Māhārāshtrī, or language of Mahārāshtra, i.e., the Berars, and the country adjoining. It became the main language of Prakrit poetry. On the other hand, in the extreme north-west of India, bordering on the Eranian tongues of what are now Afghanistan and Baluchistan, there must have been an unnamed speech, whose existence is vouched for by the next stage of the Prakrits, to be presently described, and which was a development of the particular dialect of Old Sanskrit spoken on the banks of the Indus.

While the Prakrits, by being reduced to writing, became fixed, exactly as Sanskrit had become fixed in the Brahmanical schools, and remained Apabhramsa. unchanged as a literary form of speech for many generations, the true vernaculars on which they were founded continued their own course of development. The earliest specimens of the literary Prakrits which have come down to us are contained in dramatic works (subject to strict conventional rules as regards language) and lyric poetry, the work of accomplished artists. Narrative poems do not appear But nevertheless, among the less literate, in Prakrit till a much later period. narrative poems which have not survived did exist¹. Such poems were written, not under the rules of any learned school, but for the general public; and, unlike the works in contemporary literary Prakrit, they borrowed freely from the spoken language of the people for whose benefit they were composed. In this way, a work written, say, in Oudh, although in Prakrit, would differ widely in its vocabulary and its methods of expression from one written, say, in Gujarāt. The popular words,—known as dēśya, or

¹ See Professor Jacobi's edition of the Sanatkumāracaritam, pp. xviii ff. We know of one of these narrative poems called the Tarangaratī, written in Oudh by a man called Padalipta. The date of this was not later than the 5th century A.P. Owing to the number of provincialisms contained in it, it gradually became unintelligible, and a thousand years later was translated into literary Apabhramáa under the name of the Tarangalūlā, by an anonymous writer. The Tarangaratī itself has been lost, but the Tarangalūlā survives, and has been admirably translated into German by Professor Leumann in the 'Zeitschrift für Buddhismus', III, pp. 193ff., 272ff. It is a most interesting and charming remance.

'local',—used in such Prakrit works had no literary authority and were not as a rule admitted into the literary Prakrits. They hence had no permanence,—their meanings became gradually forgotten as the local speeches changed,—fell into disuse, and were superseded by others, so that, as time went on, these narrative poems became unintelligible and required translation, for which purposes vocabularies were compiled of the dēśya words used in them. These local variations of Prakrit were named 'Apabhramśas' a word meaning 'corrupt speech' or 'decayed speech', and, as explained above, they varied from country to country.

As these works in the local Apabhramsas became more and more popular, a tradition of style developed, and one particular Apabhramsa, called the Nagara Apabhramsa, received, like the Prakrits, fixation Apabhramsa as a literary dialect, in which, in western India, works in Apabhramsa were henceforth composed. Having gained general acceptance, this became recognized over the greater part of India as a vehicle for literary work. As so used, it varied slightly from place to place, but these variant forms,—they can hardly be called dialects,—were, it must be understood, by no means the same as the several independent local Apabhramsas or other languages spoken by the people among whom each was employed for literature. They were each a local variation, not of the local dialect, but of the one language which we Indian grammarians have given us a list of no less than call literary Apabhramsa. twenty-seven of these forms of literary Apabhramsa, with brief notices of the peculiarities of each, and each named after the country in which it was employed. As so fixed, the language (with due regard for phonetic development) closely agreed with literary Prakrit in its vocabulary, while its grammar was that of the Desya of the time of its While therefore literary Apabhramsa cannot be taken as representing the speech of any part of India, or even as representing one particular phase of linguistic development, it does, on the whole, give us a very fair picture of a stage of language considerably later than that of the literary Prakrits, and, at least as regards grammatical forms, serves as a link between them and the earliest stage of the Tertiary Prakrits. Once recognized as a language worthy of being used for polite literature, Nagara Apabhramsa remained fixed with comparatively little change for some centuries,—long after it had become a dead language and after the Tertiary Prakrits had become fully established. The grammarian of western India who gave the fullest account of it was Hēmachandra, who flourished in the 12th century A.D., and to whom it was a classic as much as Sanskrit itself. He described what was in his time a dead language, preserved only in the schools of literary men. It was based on the Apabhramsa once spoken in Gujarat and western Rajputana, and in his grammar he gives numerous verses as examples of the literary form of the dialect. It is an interesting fact that some of these verses have survived almost word for word, with the necessary phonetic changes, in the modern language of western Rajputana, and are still current in popular speech.3

¹ That they were not actual vernaculars of the countries after which they were named is plain from these descriptions. These Apabhramsas were found even in countries of which the local language was Dravidian.

² This is only to be taken as a broad statement, for the vocabulary also contained a certain amount of Dēśya words, old and new, while grammatical forms belonging to literary Prakrit are also occasionally employed.

³ See the important series of articles by the late Paṇḍit Chandradhar Śarmā Culērō entitled Purānī Hindī in Vol. II (New Series, Sam. 1978) of the 'Nāgarī Prachāriṇī Pattrikā'. Especially pp. 18ff. and 44.

As to when the local Apabhramsas lost currency owing to their being superseded by the literary dialect, it is impossible to make any definite statement. Poems in the $Bh\bar{a}sh\bar{a}$, i.e., probably in some local Apabhramsa, are mentioned as having been written in the sixth

century A.D.¹, and in the tenth century Apabhramáa is recognized as a literary language standing beside Sanskrit and literary Prakrit. The date of the adoption of Apabhramáa as a classical form of speech must therefore lie between these two extremes. On the other hand, the Tertiary Prakrits were employed for literary purposes by at least the beginning of the thirteenth century. Allowing the time necessary for any language to gain such favour as to be deemed worthy of employment in literature, we may safely consider that the speech of modern India had left the Prakrit stage, and had reached the stage of the Tertiary Prakrits, i.e., of the modern Indo-Aryan vernaculars, by the year 1000 A.D., the year in which Maḥmūd of Ghaznī made the first of his fifteen invasions of India.

It is, therefore, to Apabhramsa rather than to the literary Prakrits, and much more rather than to Sanskrit, that we must look for explanations Apabhramsa dialects. of the developments of the modern Indo-Aryan vernaculars. Sanskrit and, specially, the literary Prakrits will often throw valuable side-lights on our inquiries, but the immediate foundation of our investigations must be Apabhramsa. It is true that only one form², the literary Nagara, spoken in western India, has been preserved to us by literature, but with the aid of the Prakrit grammarians it is not difficult to reconstruct the chief features of the local Apabhramsas from which the modern languages are descended. It will be sufficient to give a list of these local Apabhramsas together with the modern languages which correspond to them at the present day. The Apabhramsa of the country round the lower Indus was known as Vrāchada. This we can directly connect with the modern Sindhī and Lahndā, the latter being spoken in the ancient country of the Kaikeyas, although the tracts in which these two languages are now vernacular must once have had, as part of their population, a considerable number of speakers of Dardic languages, who have left behind them on the existing forms of speech traces of their former existence. South of the Narbada River, running nearly across India from the Arabian Sea to Orissa, there must have been spoken a number of dialects all related to the Vaidarbha or Dākshiṇātya Apabhramśa, whose head-quarters were Vidarbha, the modern Berar, known in Sanskrit as the 'Great Kingdom',-Mahārāshṭra. It, and allied Apabhramśas, represent the parent of the modern Marāthī. To the east of Dākshinātya, and reaching to the Bay of Bengal, was the Audra or Autkala Apabhramsa, from which was descended the modern Oriya. North of Audra, and covering the greater part of the present provinces of Chota Nagpur and Bihar, together with the eastern half of the United Provinces up to about the meridian of Benares, was the important Māgadha Apabhramsa, the parent of the modern Bihārī, one of whose dialects, Magahi, still bears the ancient name. It was the principal dialect which corresponded to the old Eastern Prakrit, and not only Audra, already mentioned.

According to the Śrāharshavarsta of Bāna (6th cent.), one of the author's friends is specially mentioned as a poet in the Bhāshā.

²A striking proof of the existence of dialects in Vedic times is conveyed by the fact that Apabhramsa, and indeed all the Secondary Prakeits, contain forms which cannot be explained by any reference to Classical Sanskrit. Such is the locative termination hi, derived immediately from the Pāh and Old Sanskrit (but not the literary Sanskrit) dhi. This corresponds to the Greek termination -0t, and must (as dhi) have been used in the Vedic period, although excluded from the standard dialect from which the Classical Sanskrit is derived. See Professor Wackernagel's Altradische Grammatik, p. XX.

but also Gauda is a further development of it. These three are all representatives of the old Eastern form of speech. East of Māgadha, lay the Gauda or Prāchya Apabhramśa, the head-quarters of which were at Gaur, in the present district of Malda. It spread to the south and south-east, and here became the parent of modern Bengali. Besides spreading southwards, Gauda Apabhramśa also spread to the east keeping north of the Ganges, and is there represented at the present day by Northern Bengali and, in the valley of Assam, by Assamese. Northern Bengal and Assam did not get their language from Bengal proper, but directly from the west. Māgadha Apabhramśa, in fact, may be considered as spreading out eastwards and southwards in three directions. To the north-east it developed into Northern Bengali and Assamese, to the south into Oṛiyā, and between the two into Bengali. Each of these three descendants is equally directly connected with the common immediate parent, and hence we find Northern Bengali agreeing in some respects rather with the Oṛiyā spoken far away to the south than with the Bengali of Bengal proper, of which it is usually classed as a subordinate dialect.

We have now concluded our survey of those Apabhramsa dialects which belong to what I have called the Outer Indo-Aryan languages. Between the eastern and the western Prakrits there was, as already stated, an intermediate Prakrit called Ardhamāgadhī. The modern representative of the corresponding Apabhramsa is Eastern Hindī, spoken in Oudh, Baghelkhand and the Chhattisgarh country. The eastern limit of Eastern Hindī may roughly be taken as the meridian of Benares, and, to the west, it passes a short way beyond Allahabad, its furthest point being in the district of Banda.

As regards the Inner languages, the principal Apabhramśa is that which has been preserved to us in a literary form. This was known as Nāgara Apabhramśa, and, as its name suggests, it was the Apabhramśa of Gujarāt, and the neighbouring countries, where the Nāgara Brāhmans still form an important part of the community. In various dialects,—and it certainly had local variations,—it must, if we are to accept the evidence of the modern vernaculars, have extended over the whole of western India north of the Deccan, excepting the extreme north-west. Amongst them was the Śaurasēna Apabhramśa of the middle Dōāb¹, which was the parent of Western Hindī.

Closely connected with it were the Tākka Apabhramśa of the North-Central Panjab and the Upanāgara Apabhramśa, probably of the Southern Panjab, which were the parents of the various dialects of Panjābī. Another dialect of this Apabhramśa, the Āvantya, whose head-quarters were in the country round the modern Ujjain, was the parent of Rājasthānī, and yet another, Gaurjara, of the modern Gujarātī. Both these last were certainly very closely related to the standard Nāgara Apabhramśa dialect.

There remain the modern languages of the Northern Group. These are spoken in the Himalaya from the Eastern Panjab to Nepal, and we know of no Prakrits or

It is not quite certain that the Śaurasēni Prakrit (distinguished from the Śaurasēna Apabhrańśa), as it has been preserved to us in literature, really represents a language founded on an early vernacular of the Dōāb. It may be an artificial literary production founded on the general linguistic peculiarities of a much wider area of Western India than this comparatively small tract. One thing is certain, that the literary Śauraṣēnī had peculiarities (e.g. the form of the future tense) which do not, at the present day, appear in the language of the Gangetic Dōāb, but which do appear in Gujarātī. There are, however, explanations of this fact which it is not necessary to give here. On the other hand, Śauraṣēnī Prakrit more nearly approaches Sanskrit in its vocabulary than any of the other Prakrits. It has fewer of those so-called 'Dēśya' words which are to be explained as descended from dialects of Old Sanskrit, different from that dialect on which Classical Sanskrit is mainly based. This is entirely consonant with the fact that, according to tradition, that dialect was the one which, in Vedic times, and later, was spoken on the banks of the Sarasvatī and in the Upper and Middle Dōāb. Even the Greeks recognized Muttra (Mathurā), the chief town of Śurasēna as Móδουρα ἡ τῶν Θεῶν.

Apabhramsas peculiar to this tract. The basis of the population of most of it is Tibeto-Burman, but has been in later times largely mixed with Aryan elements. North of the Panjab, the Tākka Apabhramsa no doubt influenced the language. Then there were incursions of Khasas and other tribes speaking languages of Dardic origin, and of Gurjaras from Central Asia, also probably bringing an Aryan form of speech. Finally there were immigrants from Rājputānā, whose language mingled with that of their predecessors, and on the whole prevailed. The languages of this group therefore possess a very mixed character, though their most prominent features recall features closely connected with those of the forms of speech found in Rajputana. We may therefore say that, on the whole, they can be referred to Āvantya Apabhramsa as their most important progenitor.

Classical Sanskrit, also derived from one of the Primary Prakrit dialects, but fixed in its existing form by the labours of grammarians—that may be said to have culminated in the work of the famous Pāṇini in about the fourth century B.C. This sacred language, jealously preserved by the Brāhmans in their schools, had all the prestige that religion and learning could give it. It borrowed freely from the Secondary Prakrits, and they in turn borrowed freely from it, and, as at the plesent day, the more highly educated Prakrit-speaking population freely interlarded their conversation with Sanskrit words. These words, once borrowed, suffered a fate similar to that of the ancient Primary Prakrit words which came down to them by direct descent. They became distorted in the mouths of the speakers, and finally became Prakrit in form, though not by right of origin.

Tatsamas and Tadbhavas. while the original Prakrit words, which had come by direct descent from the Primary Prakrit were called Tadbhavas or 'Having "that" (i.e. Sanskrit, or more correctly the Primary Prakrit, from one of the dialects of which Classical Sanskrit was descended) for its origin'. To these may be added a third class, the Tatsamas which had become distorted in the mouths of the Prakrit-speaking population, but which were still unmistakably borrowed words. These are usually known to European scholars as semi-Tatsamas. It is evident that, in the natural course of events, the tendency must have been for all Tatsamas to become semi-Tatsamas, and for the latter ultimately to become so degraded as to be indistinguishable

from Tadbhavas. Another class of words is also to be mentioned, the so-called 'Dēśya', or 'Local', words of the Indian grammarians. It included all words which the grammarians were unable to refer to Classical Sanskrit as their origin. Many such words were included in this group simply through the ignorance of the writers who catalogued them. Modern scholars can refer most of these to Sanskrit like any other Tadbhavas. A few others are words borrowed from Muṇḍā or Dravidian languages. The great majority are, however, words derived from dialects of the Primary Prakrit which were not that from which Classical Sanskrit has descended. They are thus true Tadbhavas, although not in the sense given to that word by Indian grammarians, in whose philosophy the existence of such ancient dialects was not dreamed of. These Dēśya words were local dialectic forms, and, as might be expected, are found most commonly in literary works hailing from countries like

Gujarat, far away from the natural home of Classical Sanskrit, the Madhyadésa. For our purpose they may be considered as identical with Tadbhavas.

purpose they may be considered as identical with Tadbhavas.

We find an exactly similar state of affairs in the modern Indo-Aryan languages.

Tatsamas and Tadbhavas in the modern vernaculars.

Omitting foreign words (such as those borrowed from Muṇḍâ or Dravidian languages, from Arabic, Persian, or English), their vocabularies may each be divided into the three classes,

Tatsamas, semi-Tatsamas, and Tadbhavas. The last class consists of words which the modern vernaculars have received by descent from the Primary Prakrits, or from Classical Sanskrit through the Secondary Prakrits. From the point of view of the present day, their ultimate origin is immaterial. In the stage of the Secondary Prakrits, they may have been Tadbhavas or Tatsamas, but the fact that they have come down to us through that stage is sufficient to make them all Tadbhavas in the stage of the Tertiary Prakrits. On the other hand, the Tatsamas and semi-Tatsamas of the present day are loan-words, borrowed in modern times by the modern vernaculars (not by their Secondary Prakrit progenitors) from Sanskrit. To take examples, the modern vernacular word $\tilde{a}j\tilde{n}\tilde{a}$, 'a command', is a Tatsama loan-word borrowed direct from Classical Sanskrit. Its semi-Tatsama form, which we meet in some languages, is $\bar{a}gy\bar{a}$, and one of its Tadbhava forms is the Hindi $\bar{a}n$, derived from the Secondary Prakrit $ann\bar{a}$. So also, $r\bar{a}j\bar{a}$, 'a king', is a Tatsama, and $r\bar{a}y$ or rāo is the corresponding Tadbhava. Of course complete triplets or pairs of every word are not in use. Frequently only a Tatsama or a Tadbhava occurs by itself. Sometimes we even find the Tatsama and the Tadbhava forms of a word both in use, but each with a different meaning. Thus, there is a Classical Sanskrit word vamsa, which means both 'family' and 'bamboo', and connected with it we find in Hindi the Semi-Tatsama bans, meaning 'family' and the Tadbhava $b\tilde{a}s$, meaning 'a bamboo'.

We thus see that for many hundred years Classical Sanskrit has been exercising, and is still exercising, a potent influence on the vocabularies of the modern vernaculars. It is only on the vocabularies that its influence has been directly felt. Their grammars show few traces of it. These have continued steadily in the course of their development since Vedic times. The influence of Sanskrit may have retarded this development, and probably did so in some cases, but it never stopped it, and not one single Sanskrit

ment since Vedic times. The influence of Sanskrit may have retarded this development, and probably did so in some cases, but it never stopped it, and not one single Sanskrit grammatical form has been added to the living grammars of these languages in the way that Sanskrit words have been added to their vocabularies. Nay, more, all these borrowed Tatsamas are treated by the vernaculars exactly as other borrowed foreign words are treated, and very rarely change their forms in the processes of grammatical accidence. For instance, in Hindōstānī, $gh\bar{o}r\bar{o}$, a horse, has an oblique form $gh\bar{o}r\bar{e}$ because it is a Tadbhava, but $r\bar{a}j\bar{a}$, a king, does not change in the oblique cases, because, and only because, it is a Tatsama. Now in all the modern vernaculars the verb must change its form in the process of conjugation, while nouns are not necessarily changed in the course of declension. Hence Tatsamas are as a rule never treated as verbs. If it is

¹ Tatsamas and Tadbhavas occur also in European languages. Thus, 'lapsus' in 'lapsus calami' is a Tatsama, and 'lapse' is a semi-Tatsama, both meaning literally 'a falling', while 'lap' is the Tadbhava form of the same word, with the different meaning of 'the hanging part of a garment'. Similarly 'fragile' and 'redemption' are semi-Tatsamas, while 'frail' and 'ransom' are the corresponding Tadbhavas, and the French 'cause' is a semi-Tatsama corresponding to the Latin 'causa' while the Tadbhava form is 'chose'.

found necessary to do so, it must be done with the help of another Tadbhava verb. For instance, the word darśan, seeing, is a Tatsama, and if we wish to use it in the phrase 'he sees', we cannot say darśanē, but must employ the periphrasis darśan karē, he does seeing. On the other hand, in all the modern vernaculars nouns need not be declined synthetically. Borrowed nouns can always be declined analytically. Hence Tatsama nouns (which are necessarily declined analytically) are common, and, in the high literary styles of all the vernaculars, very common. Thus, although there are sporadic exceptions to the broad rule, it may be laid down as a universal law that Indo-Aryan Vernacular nouns may be either Tatsamas (including semi-Tatsamas) or Tadbhavas, but that Indo-Aryan Vernacular verbs must be Tadbhavas.

During the last century, the introduction of printing and the spread of education have, in the case of some languages, induced a fashion of using Tatsamas with which the wildest Johnsonese may almost be compared as a specimen of Saxon English. It has been shown by actual counting that in a Bengali work written in the early part of the nineteenth century eighty-eight per cent. of the words used were pure Sanskrit, every one of which was unnecessary and could have been represented by a vocable of pure home growth. such cases the result has been most lamentable. The language has been split up into two sections,—the tongue which is understanded of the people, and the literary dialect, known only through the press and not intelligible to those who do not know Sanskrit 1. Literature has thus been divorced from the great mass of the population, and to the literary classes this is a matter of small moment, for 'this people, who knoweth not the law, are As Sir Athelstane Baines said in the Census Report for 1891, the Sanskritized form of literary Bengali is the product of what may be called the revival of learning in Eastern India consequent on the settlement of the British on the Hooghly. The vernacular was then found rude and meagre, or rather was wrongly considered to be such, owing to the absence of diffused scholarship and the general neglect of the country during Mughul rule. Instead of strengthening the web from the same material, every effort was made in Calcutta, then the only seat of instruction, to embroider upon the feeble old frame a grotesque and elaborate pattern in Sanskrit, and to pilfer from that tongue whatever in the way of vocabulary and construction the learned considered necessary to satisfy the increasing demands of modern intercourse. He who trusts to the charity of others, says Swift, will always be poor; so Bengali, as a vernacular, has been stunted in its growth by this process of cramming with a class of food it is unable to assimilate. The simile used by Beames is a good one. He likens Bengali to an overgrown child tied to its mother's apron-string, and always looking to her for help, when it ought to be supporting itself. Happily, of late years, some of the most influential Bengali writers have shown signs of recognizing this weakness of their language, and many works written during the last quarter of a century avoid the luxuriance of learned Sanskritisms which had hitherto choked it. This is a hopeful augury, but still much remains to be done. Although Bengali still displays the greatest weakness in this

^{&#}x27;And don't confound the language of the nation.

J. H. Frere, The Monks and the Giants.

The newly appointed minister to a Scotch parish had made a round of visits to his people. "He's a rale fine, edicated man, the new meenister", said an enthusiastic wife. "Ay, he's a' that", returned the husband. "Ye dinna ken the meaning o' the hauf o' the words he uses".—St. James's Gazette.

respect, and cannot hope to develop a vigorous literature racy of the soil until some great genius rises and sweeps away the enchantment under which it labours, other Indian vernaculars, especially Hindi, show signs of falling under the same malignant spell. The centre of Hindi literature is nowadays Benares, and Benares is in the hands of the Sanskritists. There is no necessity, as may possibly have existed in the case of Bengali, for Hindi to have recourse to the classical tongue. In themselves, without any extraneous help whatever, the dialects from which it is sprung are, and for five hundred years have been, capable of expressing with crystal clearness any idea that the mind of man can conceive. It has an enormous native vocabulary, and a complete apparatus for the expression of abstract terms. Its old literature contains some of the highest flights of poetry and some of the most eloquent expressions of religious emotion which have found their birth in Asia. Treatises on philosophy and rhetoric are found in it, in which the subject is handled with all the subtilty of the great Sanskrit writers, and this with the use of hardly a Sanskrit word that is not a technical term sanctioned by centuries of employment in the schools. Yet, in spite of Hindi possessing such a vocabulary and a power of expression not inferior to that of English, it has become the fashion of late years to write books, not to be read by the millions of Upper India, but to display the author's learning to a comparatively small circle of Sanskrit-knowing scholars. Even when two learned men converse, they use one language, and when either of them writes to the other he uses another. As one of the best of the writers of the latter part of the last century,—himself a most learned professor of Benares, but nevertheless a strong opponent of this excessive Sanskritization,—said in one of the best known and most criticized of his works, 'when a Hindi writer takes his pen in his hand, he ceases to be sober, and becomes Sanskrit-drunk.' Unfortunately, the most powerful English influence was for long on the side of the Sanskritists. This Sanskritized Hindi has been largely used by missionaries, and up to a few years ago all translations of the Bible were made into it. The few Indian writers who, like the professor just quoted, have stood up on the side of Hindi pure and undefiled have had small success in the face of so potent an example of misguided efforts. Arguments may be brought forward in favour of using Classical Sanskrit words for expressing technical terms in science and art, and I am willing to admit their force. I am not one of those who (to quote a well-known example) prefer 'the unthroughforcesomeness of stuff' to 'the impenetrability of matter,' but there the borrowing from the parent language should stop. There is still time to save Hindi from the fate of Bengali, if only a lead is taken by writers of acknowledged repute, and much can be done, and, I rejoice, is being done, by the use of a wide discretion on the part of the educational authorities of the provinces immediately concerned.

The Aryans who entered India from the north-west were at an early stage brought Influence of Dravidian languare into contact with Dravidian tribes. The new-comers intermarked with them and adopted many of their gods and many of their customs. In the matter of language they borrowed a portion of their vocabulary. Half a century ago it was generally considered that these borrowings were large. Then the pendulum swung to the opposite extreme, and it was vigorously maintained that there were hardly any at all. My own opinion is that the borrowings have been much more considerable than has been admitted by many scholars of late years, but that they were nothing like so universal as was once contended. The discussion has

centred mainly round what are known as the cerebral letters of the alphabet. These letters did not occur in the original Aryan (i.e. Indo-Eranian) language, and, in Indo-Aryan languages, came into being on Indian soil. They are common in Dravidian, as well as in Munda, languages, and in them were certainly not borrowed from Indo-Aryan. The point in discussion was whether the Indo-Aryans borrowed them from the Dravidians or whether they did not. Neither contention was entirely correct. These letters occur with frequency in words of purely Aryan origin. It would be more accurate to say that in many cases the pronunciation of Aryan words became changed under the influence of the example of the surrounding non-Aryan tongues, whose speakers many times exceeded the Indo-Aryans in numbers. Analogy did the rest, save that a certain number of words (such, for instance, as names of things of which the Aryans had no previous experience in their Central Asian home, or words of very common occurrence and in everyday use) were directly borrowed. This is borne out by the fact that, where we have reason to believe that Dravidian influence was least strong. the use of these cerebral letters is most fluctuating. Thus, in Assamese, although the distinction is maintained in writing, there is practically no distinction in pronunciation between the dental and the cerebral letters. It is probable, also, that in other cases the Dravidian languages have had an indirect influence on the development of the vernaculars. When there were two or three ways of saying the same thing, the tendency would be to employ the idiom which was most like in sound to an expression meaning the same thing used by the surrounding non-Aryan tribes. Thus, in the Prakrit stage, there were many ways of expressing the dative. One of them consisted in suffixing the Aryan word $kah\tilde{u}$ (derived from the Old Sanskrit $k_Fit\bar{e}$), and it had most chance of surviving, because it resembled the Dravidian dative suffix ku, or the old Dravidian suffix from which the modern kn is descended. And so, owing to the existence of the suffix kn, this Aryan suffix $kah\tilde{u}$ did survive to the exclusion of other dative suffixes in some of the Indo-Aryan vernaculars, and now appears in Hindi under the form of the familiar kō. Other similar instances of this non-Aryan influence on the Aryan languages of India could easily be quoted. Two will suffice. In the progress of a word through the stage of the Secondary Prakrits, a medial hard consonant first became softened, and then disappeared. Thus the Old Sanskrit chalati, 'he goes,' first became chaladi, and then chalaï. Some of the Secondary Prakrit dialects remained for a much longer period than others in the stage in which the softened consonant is still retained. Nay, this softened consonant has in some cases survived even in the modern vermiculars. Thus the Old Sanskrit śōka, 'grief,' is sōga, not sōa, in Hindi. The occasional retention of this soft medial consonant can be explained by the influence and example of the Dravidian languages, in which it is a characteristic feature. In some Dardic languages, and in some Indo-Aryan languages of the Outer Circle, especially in Kashmiri, Sindhi, and Bihārī, a final short i or u is not dropped, as is usual in the Inner languages, but is, so to speak, only half-pronounced, the mere colour, as it were, of the vowel being given to the final consonant. Thus the Sanskrit $m\bar{u}_r ti$, 'an image,' becomes $m\bar{u}_r ti$ in the Inner Hindi, but is pronounced mūrat in the Outer Bihāri. This is also characteristic of Dravidian tongues.

^{&#}x27;Such borrowed words are often given a contemptuous meaning which they did not riginally possess. For instance, there is a Dravidian word pillai meaning 'a son.' When borrowed by an Indo-Aryan language the meaning is degraded, and the word becomes pilla, a cub. This is just what we should expect under the circumstan es.

The influence of Munda languages on the Indo-Aryan tongues is not so evident. These languages appear to have been superseded on the Influence of Munda langu-Gangetic plain of India by Dravidian before the Aryans had occupied that tract, but a few ancient Munda, or Austro-Asiatic, words appear in Sanskrit. Such are the names of things like betel, cotton, cotton cloth, or bamboo arrows. which were new to the invaders, or else geographical names taken over by them, such as Kōsala, Tōsala, Kalinga, Trilinga, and several others 2. At present the Munda languages are confined to the forest country south of the plain, although, as explained above³, traces of them can be recognized as surviving in the Tibeto-Burman languages of the Central Himalaya as far west as Kanawar in the Panjab. As another Munda survival in the Indo-Aryan languages we may note the occasional counting by scores. While the Indo-Aryan numeral system is essentially decimal, the word koro, probably itself a Munda word, is commonly used for 'score', and the uneducated people of the Ganges Valley use this in the formation of the higher numerals. Thus 'fifty-two' would be expressed by them as 'two-score twelve', do korī bārah. This counting by twenties is a Munda peculiarity. The Mundas were strongest in the eastern portion of the Gangetic plain, and apparently exercised another kind of influence on the eastern dialects of Bihārī. Here the conjugation of the verb is much complicated by changes depending on the number and person of the object. The word, for instance, 'beating' is represented by one form in 'I am beating you', and by another in 'I am beating him'. These changes are Aryan in origin, and have parallels in the languages of north-western India, but the system is that of the Munda verb .

In vocabulary, the influence of Indo-Chinese languages upon those of the Indoof Indo-Chinese Aryans has been small. It is apparent only in Assamese and laguages. the corrupt Bengali of Eastern Bengal, in which a few Tibetan and Ahom words can be recognized. In Assamese, Tibeto-Burman influence has also been at work to prevent the use of the Dravidian pronunciation of cerebral letters. In the same language, the employment of pronominal suffixes with certain nouns. though undoubtedly of Aryan origin, is probably due to Tibeto-Burman influence. Their use with nouns has been dropped in the neighbouring Aryan languages, but the example of Tibeto-Burman forms of speech (which use prefixes, not suffixes, with the same class of nouns) accounts for their survival in Assamese. I think that another and more wide. spread example of the influence exercised by Tibeto-Burman languages may also be traced. It is an important point of idiom. In Sanskrit, there were two ways of expressing the past tense. We might either say 'I struck him' or 'he was struck by me', 'I went' or 'I am gone'. In the modern languages only the second, the passive. construction survives. No modern Indo-Aryan language ever says 'I struck him' or 'I went', but all say 'he was struck by me' or 'I am gone'. there was a third way, which was used only with intransitive verbs. It was an impersonal construction, as in the phrase 'it is gone by me' for 'I went'. This construction could not, in Sanskrit, be employed with transitive verbs, but it is common with them in the modern vernaculars, as in the Hindi sentence, maî-nē us-kō mārā, by me.

with reference to him, striking was done. Now, this impersonal construction is one of the most prominent peculiarities of Tibeto-Burman syntax, and it is possible that the Indo-Aryan tribes borrowed it at a very early period of their migration into India although it was not admitted to the standard speech which developed into Classical Sanskrit.

The Indo-Aryan languages have also been influenced by languages altogether Contact with the tongues of foreign Influence of non-Indian lan- strange to India. nations has affected their vocabularies to varying extents. The one which has had most influence is Persian, not the old Eranian language of pre-Musalman times (though that has also contributed a small quota), but the Arabicized Persian of the Mughul conquerors. Thus, through Persian, the Indo-Arvan vernaculars have also received an important contribution of Arabic, and even some few Turki, words. The influence of the religion of Islâm has opened another door for the entry of Arabic, and a few words have also been imported on the west coast from Arab traders. In the main, however, the Arabic element in all the Indian vernaculars, whether Aryan or not, came in with Persian, and as a part of that language. nunciation of the Persian words so imported is that of the Mughul times, and not the effeminate articulation of the Land of the Lion and the Sun at the present day. extent to which Persian has been assimilated varies greatly according to locality and according to the religion of the speakers. Everywhere there are some few Persian words which have achieved full citizenship and are used by the most ignorant rustic, and we find every variation between this and the Urdū of a highly educated writer of Lucknow, who uses scarcely a single Indo-Aryan word except the verb at the end of his sentence. Under all circumstances, however, it is the vocabulary and but rarely the syntax that is affected. Only in the Urdu of the Musalmans do we find the Persian order of words There has been no other introduction of Persian construction, nor (except by euphuists) are the Arabic words inflected according to their own rules, being obliged to conform to the grammatical system of their host. So strong is the native instinct against the use of foreign constructions that Hindū writers class a dialect as Urdū,—i.e. the Persianized form of Hindostānī,—not on the basis of its vocabulary, but on the order of words employed by it. A well-known work was issued in the last century entitled 'Tales in Pure Hindi'. It does not contain a single Persian word from cover to cover, and yet Hindū writers class it as Urdū, because the writer orders his sentences in the Persian fashion. He was a Musalman, and could not shake off the habit of using idioms which had been taught him by Maulvis in his schooldays.

Other foreign languages have also contributed to the vocabularies of the Indo-Aryan languages. They are principally Portuguese, Dutch, and English. The influence they have had is small, although some very common words are borrowed from these tongues. The use of the English vocables is growing, mainly owing to their use by employés on the railways, and by soldiers of the Indian army. The influence of a cantonment on language spreads far and wide.

CHAPTER XIII.—INDO-ARYAN LANGUAGES. OUTER SUB-BRANCH.

We now proceed to consider the Indo-Aryan languages in detail, following the Outer Sub-Branch. North order of the list given on p. 120. We begin with the Western Group. languages of the Outer Sub-branch, and, among them with those belonging to the North-Western Group.

This group may be looked upon as consisting of the Indo-Aryan languages of,

North-Western Croup. roughly speaking, the Indus Valley from

			Survey.	Census of 1921.
Lahnd	ā		7,092,781	5,652,264

roughly speaking, the Indus Valley from Peshawar to the sea, *i.e.* the Western Panjab and Sindh. From Peshawar it has also spread to the north-east over the district of Hazara and the country to its east. To its north and north-east it is in contact

with Dardic languages. On the west it has the Eranian Paṣḥtō, and on the south it meets the Arabian Sea. Only on the east is it in contact with other Indo-Aryan languages, and these are, in order from north to south, Pañjābī, the Mārwārī dialect of Rājasthānī, and Gujarātī, all three belonging to the Inner Sub-branch. Dardic languages were once spoken over the whole of this tract, and have left their traces on both Lahndā and Sindhī, but, notwithstanding this infection of Dardic speech, both are clearly Outer languages, and present points of relationship with the Outer languages of Eastern India, which are wanting in Pañjābī and Rājasthānī.¹

The country which corresponded to the Western Panjab of the present day was described in the Mahābhārata as rude and barbarous, and as almost outside the pale of Indo-Aryan civilization. It and the present Sindh included three kingdoms,—the most northern being Gandhāra, with Kēkaya lower down the Indus, and still lower the country of the Sindhus and Sauvīras. In spite of this evil character,—a character no doubt based on religious animosity, for the Western Panjab was from very early times an important centre of Buddhist teaching,—it is certain that Takshaśilā, the capital of Gandhāra, was, so long ago as six centuries before Christ, the home of the greatest university of India. It was at Śalātura, close to this university, that Pāṇini, the most illustrious of Sanskrit grammarians, was born in the fifth or fourth century B. c. In those early days, the land of Kēkaya also was famous for its learning. We are told in the Chhāndōgya Upanishad (V. xi) how five great theologians came to a Brāhman with hard questions, which he could not answer for them. He sent them on to Aśvapati, the Kshatriya king of Kēkaya, who, like a second Solomon, solved all their difficulties.

The Western Panjab has always been exposed to conquerors from the north and from the west. According to the usually accepted account, it was through it that the Aryans entered India. The next recorded invasion was that of Darius I of Persia (521-485 B. C.) shortly after the time of the Buddha. According to Herodotus he conquered it and divided it between two satrapies, one of which included Gandhāra (Herodotus iii, 91), while the 'Indians,' i.e. the inhabitants of the Indus Valley, formed by themselves the 20th Satrapy (iii, 94).² Beyond this the authority of Darius did not extend (iii, 101). Herodotus adds (iii, 94) that these 'Indians are more numerous than

^{*} For a full discussion on this point, see Bvlletin of the School of Oriental Studies, Vol. I, Part iii, pp. 78ff.

^{*} See also Rawlinson's note to his translation of Herodotus iii, 98.

any other nation with which we are acquainted, and paid a tribute exceeding that of any other people, to wit, 360 talents of gold dust.' Darius had such complete authority over this part of India, or rather over what was to him and to Herodotus 'India,' that he sent a fleet down the Indus to the sea, whence they sailed homewards towards the west. The huge army that his successor Xerxes led (480 B. C.) against Greece contained men from Gandhāra and from the Western Panjab. The latter, according to Herodotus (vii, 65, 66), wore cotton dresses, and carried bows made of cane, and arrows also of cane with iron tips. The mention of cane arrows reminds us of the fact that arrows made of bamboo (to which Herodotus probably refers) were novelties to the Aryans who invaded India, and that they had to borrow the Austro-Asiatic name for them (see p. 132).

The invasion of Alexander the Great (327-325 B. C.) was confined to the Western Panjab and Sindh. In 305 B. C. Seleucus Nicator invaded India, and after crossing the Indus made a treaty of peace with the famous Chandragupta. In the second century B. C. two Greek dynasties from Bactria founded kingdoms in the Western Panjab. One, that founded by Euthydemus, ended about 156 B. C., and the other, that of Eucratides, about 20 B. C. After them, at various times, other nationalities, Scythians, Parthians, Kushanas, and Huns, invaded India through the north-west, and finally, through the same portal, or through Sindh, came the many Musalman invasions of India, such as that of Maḥmūd of Ghaznī or those of the Mughuls.

The whole Panjab is the meeting ground of two entirely distinct Indo-Aryan languages,—viz., the old Outer language strongly influenced by Dardic, if not actually Dardic, which expanded from the Indus Valley eastwards, and the old Midland language, the parent of modern Western Hindi, which expanded from the Jamna Valley In the Panjab they overlapped. In the Eastern Panjab, the wave of Dardic with old Lahnda had nearly exhausted itself, and the old Western Hindi had the mastery, the resulting language being the modern Panjabi. In the Western Panjab. the old Western Hindi wave had nearly exhausted itself, and the old Lahnda had the mastery, the resulting language being the modern Lahnda. The latter language is therefore in the main an Outer language, strongly influenced by Dardic, but bearing traces of the old Western Hindi. Such traces are much more numerous, and of much greater importance, in Pañjâbī. Lahndā may almost be described as a Dardic language infected by Western Hindī, while Pañjābī is a form of Western Hindī infected by Dardic. This linguistic condition leads us to the conclusion that a mixed language, mainly Outer, but partly Dardic, once extended over the whole Panjab, and that the inhabitants of the Midland, through pressure of population or for some other reason, gradually took possession of the Panjab, and partly imposed their own language on the inhabitants. In no other way can the nature of the mixed language of the Eastern Panjab be explained. One result of this mixture is that it is quite impossible to mark any definite boundaryline between Pañjábi and Lahndā, and if, for convenience sake, we take the degree of 74° East longitude as an approximate conventional frontier, it is to be clearly understood that much that is very like Lahnda will be found to its east, and much that is very like Pañjābī to its west.

Sindhi, on the contrary, has much more nearly retained its original character of a language mainly Outer, but partly Dardic. To its east it has Rājasthāni, not Pañjāhi, but it is protected from invasion from the east by the physical obstacle of the desert of

Western Rajputana. While modern Lahndā merges imperceptibly into Pañjābī, Sindhī does not merge into Rājasthānī, but remains quite distinct from it. Such border dialects as exist are mere mechanical mixtures, not stages in gradual linguistic change.

Although from very early times the area in which the North-Western Group of Indo-Aryan languages is spoken has been frequently subjected to foreign influence, it is extraordinary how little this mixed Dardic-cum-Outer form of speech has been influenced by it, except that, under Musalman domination, the vocabulary has become largely infused with Persian (including Arabic) words. In the true Dardic languages a few Greek words have survived to the present day, but I have not met any such either in Lahnda or Sindhī.

Little is known about the linguistic ancestry of these languages. The immediate predecessor of Sindhī was an Apabhramśa Prakrit named Vrāchada, regarding which the Indian grammarian Mārkaṇḍēya gives us a few particulars. He moreover mentions a Vrāchada Paišāchī apparently spoken in the same locality, and lays stress on the fact that the Kēkaya Paiśāchī is the principal form of that Prakrit. We have seen (p. 109) that Paiśāchī was the language of the ancestors of the modern Dards, so that the fact of the existence of a Dardic influence on the languages of the North-Western Group is borne out by this evidence that Paiśachi was once spoken in this same tract. We have no evidence as to the particular form of Apabhramsa spoken in the Lahnda area, except that Mārkandēya tells us that people who employed literary Apabhramsa in that locality —the ancient Gandhāra and Kēkaya,—were fond of using a word twice over in order to indicate repetition or continuance. But in Gandhara there were two famous rock inscriptions of the Indian Emperor Asoka (circa 250 B.C.) at Shahbazgarhi and Mansehra which were couched in what was then the official language of the country. This was a dialectic form of Pali, distinguished by possessing many phonetic peculiarities that are still observable in the Dardic languages and in Lahndā and Sindhī.1

Lahnda is the name of the language of the Western Panjab. As explained above, there is no distinct boundary between it and Pañjābī, which. Lahndā. even more than elsewhere in India, insensibly merge into each other, 74° East longitude being taken as the conventional boundary-line. It is spoken by seven millions of people, or about the same as the population of Austria. Lahnda is known by several other names, such as Western Pañjābī, Jaṭkī, Uchchī, and Hindkī. The word 'Lahnda' itself means '(sun)-setting', and hence 'the west'.2 'Western Pañjābī' has the disadvantage of suggesting that Lahnda is a dialect of Pañjābī, whereas it is nothing of the sort. Moreover it leads us into difficulties when we wish to speak of North-western Western Pañjābī' and similarly named dialects. 'Jaṭkī' means the language of the Jatt tribe, which is numerous in the central part of the Lahndá tract: but Lahnda is spoken by millions of people who are not Jatts, and millions of Jatts of the Eastern Panjab do not speak Lahndā. 'Uchchī', the language of the town of Uchch (Uch or Ooch of the maps), is really another name for the Multani dialect of Lahnda. 'Hindki' or 'Hindko', the language of the Hindus (i.e., non-Pathans), is the name given

¹See J.R.A.S., 1904, p. 725.

²Note that, in this meaning, the word is a substantive, not an adjective, and that hence we cannot use a feminine form Lahndā, as some writers contend. The word for 'western' is not lahndā, but is löhndāchar or dilāhī. We must take Lahndā here as a purely English word,—merely a conventional abbreviation of the phrase Lahndā tölī, or 'the language of the West', spoken from the point of view of the Eastern Panjab.

LAHNDĀ. 137

to Lahadā in the west of the Lahadā tract, in which Musalmān Paṣḥtō-speaking Paṭhāns also dwell.

The number of dialects of Lahndā is very great. Some twenty-two are described, under various names, in the Survey. They fall into two main groups, a southern and a northern, the dividing line being the southern face of the Salt Range. As for the southern group, we must first mention a number of dialects spoken, south of the Salt Range, in the Rechna and Jech Dōibs, *i.e.*, in the Districts of Shahpur, Jhang, Gujran-

Lahndā Dialect	wala, and Gujrat. The Lahndā of Shahpur				
Lannas Distect	Survey. is the form which has been taken in the Survey as the standard form of the lan-				
Standard	1,507,827 2,176,983 guage, and that of the other three districts is closely allied to it. South of the Rechna				
North-Western North-Eastern Total	. 881,425 . 1,752,755 - 7,092,781 (2,342,954 speakers in 1921) which is spoken in the Multan, Muzaffargarh, and Dera Ghazi Khan Districts. In the two				
Mūltānī. Hindkī. Bahāwalpurī. Sirāikī Hindkī.	last named it generally goes by the name of Hindki. It is also spoken in the State of Bahawalpur, where it is called Bahāwalpuri. Moreover Mūltāni is spoken by scattered communities all over Sindh, where it is called Sirāiki Hindki. Mūltāni is a transition dialect between standard Lahndā and				
_	l points of similarity with the latter language. Returning of the Sind Sagar Dōāb, and in the adjacent parts of the				
Thaļī.	District of Dera Ismail Khan, there is Thali, or dialect of the Thal, or Desert. It approaches the standard dialect of				
Shahpur, but differs in I	pronunciation, and has several points of connexion with the				
	, there are two mixed dialects spoken by the Khētrāns and				
Khētrānī, Jā f lrī.	Jāfirs beyond the frontier in the Laghārī and Sulaiman Hills. Khētrānī and Jāfirī are both very similar to the Lahndā of Dera Ghazi Khan, but exhibit many interesting Dardic peculiarities. As may be expected from their geographical posi-				
tion, they both borrow from	m Balōchī.				

The dialects of the Salt Range and beyond it on the north fall into two sub-groups, a north-western and a north-eastern. These differ not only in vocabulary, but also in grammar. In the latter respect, the most typical point of difference is in the postposition of the genitive. In the north-west, this is $d\bar{a}$, as in Pañjābī, and in the north-east, it is $n\bar{a}$, which connects us with Dardic. The north-western sub-group runs from the centre of the Salt Range nearly due north through the districts of Jhelum, Attock, and

Hazara (where it is called Hindkō), and is also used by the Hindūs of Peshawar. The north-eastern is more important. It covers the rest of the Salt Range, not only the eastern end, but also the western end, where it is the dialect of the important tribe of the Awāṇs and crosses the Indus into Kohat, where, as in Hazara, it is called Hindkō. To the north-east it appears as Pōṭhwārī (423.802 speakers in 1921), and under this name covers

VOI. I, PART I.

the District of Rawalpindi and parts of Jhelum and Gujrat. In the Murree Hills and in parts of Hazara it is also spoken with dialectic variations, and finally it is the language

of the submontane tract south of Kashmir, where it is the tongue of the Chibh and other tribes and of the State of Punch.

Lahndā differs widely from the better known Pañjābī in vocabulary, more nearly approaching Sindhī in this respect. Some of its words are also found in Kāshmīrī,—a Dardic language,—and it contains even words once used in that form of speech but now no longer current. It is in its grammatical forms that the most characteristic differences from Pañjābī are exhibited. Lahndā has a true future, of

most characteristic differences from Panjābī are exhibited. Lahndā has a true future, of which the characteristic letter is \mathfrak{s} , and a true passive formed by suffixing $\tilde{\imath}$, the former of which is strange to, and the latter of which is rare in, the speech of the central Panjab. It also employs pronominal suffixes with all the freedom of Sindhī and of the Dardic languages, and has many postpositions which do not occur in Panjābī. The northern dialects are harsher and more nasal than the southern, and possess characteristic features of their own. Amongst them may be mentioned the use, as already stated, of the postposition $n\tilde{a}$ instead of $d\tilde{a}$ to form the genitive, the employment of an oblique form in the case of nouns ending in consonants, and the formation of the present participle.

Beyond ballads and other folksongs Lahnda has no literature. The majority of its speakers being Musalmans, the Persian character is generally written Literature and employed for writing it. Some Hindus employ character. character common over the Panjab and Sindh called $Landa^{1}$, This is a most imperfect means of writing. It has only two or three or 'clipped.' characters for the initial vowels, and none for the non-initial. The consonants, too, are far from clear and the script varies from place to place. It is seldom legible to anyone but the writer, and not always to him. In 1819 Carey published an edition of the New Testament in this character, in the dialect of the country round Uchch. He called this dialect the Uchchi language.

Sindhi is the language of Sindh, the country on each side of the River Indus, beginning about latitude 29° N. and stretching thence down Sindhī. to the sea. In the north it merges into Lahnda, to which Sindhī. it is closely related, and which, in the Sirāiki Hindki Survey. dialect, is also spoken all over Sindh by scattered communi-Vicholi 1.375,686 Siraiki 1.112.926 ties from the Western Panjab. It is spoken by three Tharēlī 204,749 and a quarter millions of people or a little more than the Lāsī 42,613 population of Denmark. Sindhi has six recognized dialects, 40,000Lārī Kachchhi 491,214 Vicholi, Sirāiki, Lāsi, Lāri, Tharēli, and Kachchhi. The Unspecified 7.031 first is spoken in Central Sindh. It is the standard dialect. and that employed in literature. Sirāikī is merely a variety 3,274,219 Total Vichōlī. of Vicholi and is no real dialect. The only difference consists in its pronunciation being more clearly articulated and in slight variations in its vocabulary, and it is frequently confused with the allied

1	The word has	nothing to	do with	the word	Lahadā	which, as w	e have seen	means ' West	,

SINDHĪ. 139

Sirāikī Hindkī spoken in the same country. In Sindhī, the word Sirō means the 'head' of anything, and Sirāikī hence comes to mean 'up-stream' or 'northern,' from the point of view of the Lāṛ, or lower Sindh. Sirāikī is considered by Sindhīs to be the purest form of the language, or, as the proverb says, 'a learned man of the Lāṛ, is an ox in the Sirō.' It must be remembered that, as the name of a locality, 'the Sirō' or 'the up-stream country' is a relative term, and that its meaning varies with the locality of the speaker. The lower down the Indus a man lives, the larger the extent of the Sirō, and from the point of view of an inhabitant of the Lāṛ, the term practically includes

the Vichōlō, or Central Sindh. Lāsī is the form of Sindhī spoken in the State of Las Bela. It is a transition dialect

between Vichōlī and Lārī. The latter is the language of the Lārī already mentioned, and is considered to be rude and uncouth, but it retains many old forms, and displays one important feature of the Dardic languages—the disaspiration of sonant consonants—which no longer exists in Vichōlī. Tharēlī and Kachchhī are

both mixed dialects. The former is spoken by the hunting and outcast tribes of the Thar^u, or desert, of Sindh, which forms the political boundary between that province and the Marwar country. It is a transition form of speech representing Sindhī shading off into Rājasthānī, through a mechanical mixture of the two languages. Kachchhī, on the other hand, is a mixture of Sindhī and Gujarātī, spoken in Cutch.

Sindhī has received very slight literary cultivation, and few books have been written in it. Its proper alphabet is Laṇḍā, which, as usual, varies from place to place and is legible with difficulty. The Gurmukhī and Nāgarī alphabets are also employed, but the Persian alphabet, with several additional letters for the sounds peculiar to the language, is the one now in general use.

Owing to its isolated position, Sindhi has preserved many phonetic and grammatical peculiarities which have disappeared elsewhere, and is a History of Sindhi. typical example of the Outer languages. In ancient times Sindh included the old Vrāchada country, and to the present day the language retains special features which were recorded hundreds of years ago as characteristic of the old Vrāchada Apabhramsa from which it is descended. As already stated, the Hindū grammarians also recorded a Paiśāchī dialect as spoken in the Vrāchada country. The Piśāchas, therefore, were once found in the country which is now Sindh, alongside of the people who then spoke Vrāchada Apabhramsa, and whose descendants now speak Sindhī. One typical peculiarity of Paisāchī and of Dardic, its modern representative, is that the letter t when it comes between two vowels is not elided, as occurs in all Indo-Aryan languages, but is kept without change. In other Indian Prakrits such a t first became d, and then disappeared altogether. The same phenomenon is to-day observable, though to a less extent, in Lahnda and Sindhī, and even occasionally in Pañjābī. Pañjābī, as becomes its mixed origin, usually has both forms, that with the t and that without. But Lahnda and Sindhi in such cases prefer to keep the t intact. Thus, the word for 'sewn' is $\varepsilon i t \bar{a}$ in Lahndā (Sindhī uses another form), but sītā or sīā in Panjabī; 'done' is in Lahndā kitā Sindhī kītō, but Pañjābī kītā or kariā; 'drunk' is pītā in Lahndā and Pañjābī and

 $p\bar{\imath}t\bar{o}$ in Sindhī. In a pure inner language, such as Hindī, the t would be dropped in all these cases, and we should have $s\bar{\imath}a$, $k\bar{\imath}a$, and $p\bar{\imath}a$, or some such words.

In the Dardic languages, the formation of the past participle of a verb calls for no special attention except in one case. In the Maiyã dialect of Kōhistānī it ends in the letter l. Thus the verb kut-, strike, has kut-ag-il for its past participle. We also find occasional instances of this in Shiṇa; but we do not find anything like this in the Inner sub-branch of the Indo-Aryan languages or in Lahndā, though the form reappears in Sindhī. Here the past participle generally ends in $y\bar{o}$, as in $m\bar{a}ry\bar{o}$, struck, from the verb $m\bar{a}r$ -an, to strike. But, when it is desired to emphasize the adjectival force of this participle, the final \bar{o} is changed to l, so that we get such forms as $m\bar{a}r$ -ya-l, meaning

one who is in the condition of having been struck. Gujarātī is an Inner language, but, as we shall see, it has been superimposed on another language of the Outer sub-branch, of which traces can still be observed. One of these traces is the existence of this very 1-participle, which is used in much the same way as in Sindhī, as in māryō or mārē-l,

It must not be supposed that I suggest that either Lahndā or Sindhī is derived from any l'aisachī (i.e., Dardie) dialect. From the fact that both an Apabhransa and a Paisāchī were spoken in Vrāchada, we are entitled to maintain that the Piśāchas were not the same tribe as those who spoke the local Apabhransa. They were therefore foreigners, and so, by parity of reasoning, were those of Kēkaya. Assuming that the home of the Piśāchas was somewhere in the country at the feet of the Pāmīrs, the natural course for their origination would have been through the Swat Valley, down the Indus to the Kēkaya and Vrāchada country. This would be in times when the original inhabitants, whom they found in situ, were in so early a stage of linguistic development that they still retained the t in words like pātā and so forth. The influence of the cognate language of the alien Piśāchas would account for the speakers of Sindhī and Lahndā not dropping the t, when, in the natural course of development, this had occurred farther cast. Such influence would have more effect in the direction of conservation than in the direction of innovation, and hence we find few traces of other Paiśāchī peculiarities (such as the change of d to t) which were strange to the original dialect. I freely admit that much of this is pure theory, but I do not see my way to admitting the correctness of any explanation, other than the influence of some non-Indo-Aryan form of speech, for the retention of the t in these languages. Paiśāchī supplies all the requirements of such a tongue, both in its locality and in its phonetic laws. (Since this was written, Dr. P. Tedesco has given a different explanation of the presence of this t, in J. A. O. S. XLIII, p. 385ff. See also the present writer in J. R. A. S., 1925, pp. 222ff.)

MARĀŢHĪ. 141

struck. Further south, in Marāṭhī, still an Outer language, we find this l-participle established as the only form of the past participle, as in mār-ilā, struck. So also we find this participle in all the remaining Outer languages, as in the Oriyā mārilā; Bengali mārila; Bihārī māral; and Assamese māril. This l-participle, therefore, is not only current over the whole of East-Aryan India, but reaches, through an unbroken chain of dialects, all imperceptibly shading off into each other, across India to the Arabian Sea, and thence northwards through Gujarātī and Sindhī, but leaping across Lahndā, into the Dardic country of the Indus Kōhistān. This is illustrative of the intimate relationship which exists among all these Outer forms of speech, and, although Assamese differs widely from Marāṭhī, and a speaker of one would be entirely unintelligible to the other, a man could almost walk for twenty-eight hundred miles, from Dibrugarh to Bombay and thence to Dardistan, without being able to point to a single stage where he had passed from one language to another. Yet he would have passed through eight distinct tongues of the Indian Continent, Assamese, Bengali, Oriyā, Marāṭhī, Gujarātī, Sindhī, Lahndā, and Kōhistānī, and through many dialects.

To the south-east, Sindhī merges into Gujarātī, through its Kachchhī dialect.

Gujarātī will be dealt with later on amongst the inner languages. As we now have it Gujarātī is a member of the Inner Sub-branch, although, like Pañjābī, it occupies territory once held by some member of the Outer Sub-branch. Leaving, therefore, Gujarātī for the present we go on further south along the west coast of the Indian Peninsula, and, about a hundred miles north of Bombay, near the Portuguese settlement of Daman, come to Marāṭhī.

Marāthī, in its various dialects, extends nearly across the Peninsula of India.

It is spoken by nineteen millions of people, Survey Census of 1921. or two millions less than the population of Marāthi . 18.011.948 18,797,831 Spain. In the Bombay Presidency it covers the north of the Deccan Plateau and a strip of country between the Ghats and the Arabian Sea, extending to about a hundred miles south of Goa. It is also the language of most of Berar and of a good portion of the north-west of His Exalted Highness the Nizam's dominions. It stretches across the south of the Central Provinces (except in a few localities in the extreme south, where the language is the Dravidian Telugu). and occupies also a great part of the State of Bastar. Here it merges into Oriya through the Bhatri dialect of that language. It has to its north, in order from west to east, Gujarātī, Rājasthānī. Western Hindī, and Eastern Hindī. The first three are languages of the Inner Sub-branch, and Maratin does not merge into them. On the contrary, there is a sharp border-line between the two forms of speech. On the other hand, its most eastern dialect, Halabi of Bastar, shows such intimate connexion with the neighbouring Chhattisgarhi dialect of Eastern Hindi, that it is a matter of opinion to which language it belongs. In other words, Marāthī merges into Eastern Hindī through its Halabi dialect. Further east it gradually shades off into Oriya, which is also a language of the Outer Sub-branch. We have already seen that when, in Sindhi, it is

desired to give the past participle of a verb a purely adjectival force the letter l is appended to it. In Gujarātī we meet the same form with a more extended, but not universal use.

١,

¹ See the remarks on p 31 aute.

In Marāthi, we for the first time find this l the only means of indicating past time, no other form being allowed as an option, and this method is henceforth the sole means which we shall find employed through the remaining languages of the Outer Sub-branch.

In one point, Marathi differs from all other Indo-Aryan vernaculars. In the language of Vedic times, each word had a tone, just like those of which we found numerous instances in the Indo-Chinese languages. Each word had its own peculiar phonetic pitch, as distinct from the stress-accent with which we are familiar in English. It is

as if the speakers of Vedic Sanskrit said

where we say

Marāthi retains many traces of these an-

cient tones, though they are no longer tones, but have been converted into weak stress-accents, much as we say *María* nowadays.¹ The other Indo-Aryan languages have all lost every trace of these ancient tones, and have adopted instead an entirely independent system of stress-accents falling, with one or two exceptions, as much as possible on the antepenultimate of each word, much as if we were to say *Mária*.

Marāthī has a copious literature of great popularity. The poets wrote in the true vernacular of the country, and used a vocabulary mostly Marāthi Vocabulary. composed of honest Tadbhavas. The result is that the language of the present day is rich in them, and though the scholars for whom the Maratha country is famous have in later times endeavoured with some success to heighten the style of the language by the use of Tatsamas, these parasites have not obtained that complete mastery over the literary form of speech that they have in Bengali. The country was not invaded by the Musalmans till a comparatively late period, and was more or less successful in repelling the invasion, so that the number of words borrowed from or through Persian is small. As Mr. Beames says, Marathi is one of those languages which may be called playful. It delights in all sorts of jingling formations, and has struck out a larger quantity of secondary and tertiary words, diminutives, and the like, than any of the cognate tongues. Marathi is usually written and Written Character. printed in the Nagari character, a modification of which is

Sivajī (1627-80), is used by some for current correspondence.

The earliest Marāṭhī writers whose works have come down to us are Nāmadēva and Dnyānōbā, who flourished at the end of the thirteenth century and drew their inspiration from the early Vaishnava reformers. Śrīdhara (end of sixteenth century) is best known for his paraphrases of the Sanskrit Purāṇas, but the most celebrated of all was Tukārāma or Tukōbā, a contemporary of Śivajī, who wrote in the first half of the seventeenth century. His 'Abhangas.'

known as modi or 'twisted,' and invented by Bālāji Avajī, Secretary to the famous

Sanskrit Purāṇas, but the most celebrated of all was Tukārāma or Tukōbā, a contemporary of Śivajī, who wrote in the first half of the seventeenth century. His 'Abhangas,' or loosely constructed hymns in honour of the god Viṭhōbā, are household words in the Marāṭhā country. The most famous successor of Tukārāma was Mōrōpant (A.D. 1720).

¹See Professor Turner, 'The Indo-Germanic Accent in Marāthī, in J.R.A.S., 1916, 203ff.' The particular example given by me has been suggested by the example given in Max Müller's Sanskrit Grammar. Some languages, such as Bengali, throw the stress-accent even further back than the antepenultimate.

As in the case of the other vernaculars of India, nearly all the earlier work is in verse, although there are some prose chronicles of varying importance.

No less than thirty-nine names have been recorded in the Survey as those of dialects of Marathi. Few of these can be called genuine dialects. Dialects. the majority being merely forms of the standard speech or of one of the real dialects, pronounced in some peculiar way according to locality or to the caste of the speakers. For instance, the Marathi of the Konkan north of Ratnagiri is very nearly the same as the standard, but natives recognize two dialects, one spoken by the Brahmans, and another spoken by Musalmans. These minute differences are all investigated in the pages of the Survey, but here would be manifestly out of place. It will be sufficient to mention here the four main dialects, viz., Dēśī, Konkan Standard, the Marathi of Berar and the Central Provinces, and Konkani.

¹ These figures for sub-dialects are necessarily those of the Survey only.

Historically, it should represent the purest Marāṭhī, for Berar corresponds to the ancient Vidarbha or Mahārāshṭra; but in after centuries the political centre of gravity moved farther west, and with it the linguistic standard. The River Wardha, which separates the Central Provinces from Berar, may also be taken as the linguistic boundary between Varhāḍī and the next sub-dialect, Nāgpurī. The former is, however, also found in the District of Betul, in the Central Provinces, while, on the other hand, the Marāṭhī of the Basim District and of the western part of Buldana, both belonging to Berar, is not Varhāḍī, but more nearly approaches the Dēśī of Poona. The language of the southern

half of the Central Provinces is also Marāthī, the local form Nāgpurī. being called Nagpuri (1,823,475). It is practically the same as Varhadi, but, as elsewhere, varies according to locality, diverging further from the standard as we go east. In the Saugor District, the Marathi spoken is not Nagpuri, but is the standard form of the language. This tract of country passed to us from the Peshwa and not from the Nagpur Raj, and the Marathī-speaking population came from Poona, not Nagpur. They regard the true Nagpur people with some contempt in consequence. The same is the case with the scattered Maratha families of Damoh and Jabalpur. In the extreme east of the Nagpuri area, in the District of Balaghat, the dialect has changed so much that it has a separate name, and is called Marheti. In this part of the Central Provinces, the Districts of Balaghat and Bhandara are the eastern outposts of Nagpuri. Further east we are met by Chhattisgarhi, which is a dialect of Eastern Hindī. To the south of this area, Marāṭhī covers the north of the District of Chanda (the south is occupied by Telugu), and gradually merges into Halabi, also called Bastari (101,971), was for Halabī.

Halabī. long nobody's child in the linguistic classification of India. Our Survey shows that it is a corrupt mixture of several languages, both Aryan and Dravidian, forming a transition tongue between Marathi and Oriya, but generally with a Marāthī backbone. The Halabī of the State of Bastar is considered by Chhattīsgarhī-speakers to be Marāṭhī, and by Marāṭhī-speakers to be Chhattīsgarhī, and this well illustrates its mixed nature. It is spoken in the central part of Bastar, having Telugu to its south. In the north-east corner of Bastar we find a form of speech called Bhatri. This is the link between Halabī and Oriyā, and is classed as a dialect of the latter language. It might with almost equal accuracy be described as one of the many forms Immediately to its east lies Oriyā. We have now brought Marathi of Halabi. across India, from the Arabian Sea to within a couple of hundred miles of the Bay of Bengal. Hitherto attention has naturally been fixed upon the particular dialect of it which is spoken in the Bombay Presidency, and it has usually been classed as the most south-western of the Aryan languages of India. It will have been seen that 'Southern' describes it much more completely.

Returning to the Bombay Presidency, we must consider the one form of Marāṭhī which is a real dialect, and not merely a corrupt form of the standard form of speech. This is Kōṅkaṇī, spoken in the Konkan, from Malwan in the north to Karwar in the south. It is the language of the Portuguese settlement of Goa, and is widely spoken in the Districts of Belgaum and North and South Kanara and in the State of Sawantwadi. In Goa, it is usually called Goanese. It has several other local names, indicating slight differences of

idiom, which it is not necessary to mention here. As a dialect of Marāthī, it branched off from the common parent Prakrit at a relatively early period, so that there are many divergencies from the standard of Poona. Indeed, in some respects, it has preserved an older stage of phonetical development, and shows a greater variety of verbal forms. It has no surviving national literature, the old manuscripts having been destroyed after the Portuguese conquest of Goa as containing pagan doctrines, but a new literature, Christian in character, has sprung up under the care of the Portuguese missionaries. One of these, an Englishman, Thomas Stephens (or Thomaz Estevão) by name, who came to Goa in 1579 and died there in 1619, wrote the first Könkani grammar, and from his hand we also have a poetical paraphrase of the New Testament which is still popular. The old Konkani literature is said to have been written in the Nagari character, and this was also used by Carey in his translation of the New Testament. Later on the Kanarese alphabet was introduced, and lastly the Jesuit Fathers of the Christian College at Mangalore have made use of the Roman alphabet in several of their religious books. The modern literature is almost exclusively religious, and is now written in these three characters.

Opportunity may here be taken to mention Singhalese. This, though an Indo-Aryan form of speech, is not dealt with in the Survey, nor is it the language of any part of India proper. It is spoken in Ceylon, especially in the southern half of that island, whither it was imported, apparently with Buddhism, from the western side of India. Its nearest relative in India is Marāṭhī, out the relationship is distant, and there are few obvious traces of the connexion.

A dialect of Singhalese is Mahl, spoken in the Maldive islands and Minicov.

The languages of the Eastern Group are Oriya, Bihari, Bengali, and Assamese. It

thus includes all the Aryan languages of India which, roughly speaking, are in use to the east of the meridian of Benares. Oriyā or Utkalī is the Aryan language spoken in Orissa and in the country bordering on that Province. To the north it includes a portion of the District of Midnapore, which, together with a part of Balasore, was the Orissa of the phrase 'Bengal, Bihar, and Orissa' found in the Dīwānī grant and in the regulations framed by Government in the last decades of the 18th century. It is also the language of the District of Singhbhum, belonging to the Division of Chota Nagpur,

and of several Indian States which fall politically within that Division. On the west it is the language of the greater part of Sambalpur, which has lately been added to the Orissa Division, and of a small portion of the District of Raipur in the Central Provinces, together with the many Native States which lie between these two Districts

¹ In the Census returns, nearly all the speakers of Bihārī are shown as speaking Western Hindī. In the returns, only 7,331 are shown for Bihārī. The figures given above are corrected estimates.

and Orissa proper. On the south it is the language of the north of the District of Ganjam, with its connected Indian States, and of the Jeypore Agency of Vizagapatam. It is thus spoken in four Provinces of British India,—Bihar and Orissa, Bengal, the Central Provinces, and Madras, and covers, say, 82,000 square miles, an area a little less than that of Yugo-Slavia, while the number of its speakers (nine millions) is a little more than that of the combined populations of Norway and Sweden.

It is called Oriyā, Ödrī, or Utkalī, that is to say, the language of Ödra or Utkala both of which are ancient names for the country known Name of Language. to the English as Orissa. It is sometimes called Uriya, but this name is merely a mis-spelling of the more correct Oriya. The earliest example of the language which is at present known consists of some Oriva words in an inscription of the thirteenth century. An inscription dated a century later contains several sentences which show that the language was then fully developed, and differed little from the modern form of speech either in spelling or in grammar. Linguistic boundaries. It is bounded on the north by Bengali, on the north-west by Bihari, on the west by the Chhattisgarhi dialect of Eastern Dialects. Hindi, and on the south by Telugu. To the south-west it merges into the Halbi dialect of Marāthi through Bhatri. This is the only true dialect. In the north there are several mixed dialects, half-Oriyā and half-Bengali. Of these

In the north there are several mixed dialects, half-Oṛiyā and half-Bengali. Of these there are almost as many forms as there are speakers, the two languages being mixed at random according to the personal equation of each. A sentence may begin in Oṛiyā and end in Bengali or vice versā, or the two languages may be mixed clause and clause about, but all this does not constitute any definite dialect. Elsewhere Oṛiyā has local varieties of pronunciation and accent, but the standard is in the main closely

followed over the whole Oṛiyā-speaking area. Bhatrī is the transition dialect to Marāṭhī, and the only specimens of it that I have seen were written in the Nāgarī (i.e., the Marāṭhī) alphabet, and not in that peculiar to Oṛiyā.

Orivā is handicapped by possessing an exceedingly awkward and cumbrous written character. This character is, in its basis, the same as Written Character. Nāgarī, but is written by the local scribes with a stylus on a talipot palm leaf. The scratches are themselves legible, but, in order to make them more plain, ink is rubbed over the surface of the leaf and fills up the furrows that form the letters. The palm leaf is excessively fragile, and any scratch in the direction of the grain tends to make it split. As a line of writing on a long narrow leaf is necessarily in the direction of the grain, this peculiarity prohibits the use of the straight top line which is a distinguishing feature of the Nagari character. For this the Oriya scribe is compelled to substitute a series of curves, which almost surround each letter. It requires remarkably good eyes to read an Oriva printed book, for the exigencies of the printing-press compel the type to be small, and the greater part of each letter is this curve, which is the same in nearly all, while the real soul of the character, by which one is distinguished from another, is hidden in the centre, and is so minute that it is often difficult to see. At first glance, an Oriva book seems to be all curves, and it takes a second look to notice that there is something inside each.

ORIYĀ. 147

On the ground that its grammatical structure in some respects closely resembles that of Bengali, Oriya has more than once been claimed by Connexion with Bengali. Calcutta Pandits as a dialect of that language. They are, however, wrong. It is a sister, not a daughter, and the mutual points of resemblance are due to the fact that they have a common origin in the ancient Magadha Apabhramsa. It has the same dearth of forms for expressing number as Bengali, and when the plural has to be expressed it is done, as in that language, by the aid of a noun of multitude. As in all the Eastern languages, the first and second persons singular of the verb are used only by the uneducated, or when respect is not intended. It has one great advantage over Bengali in the fact that, as a rule, it is pronounced as it is spelt. There are few of those slurred consonants and broken vowels which make Bengali so difficult a language for a foreigner to speak correctly. Each letter in each word is clearly sounded, and it has been well described as 'comprehensive and poetical, with a pleasing sound and musical intonation, and by no means difficult to acquire and master.' In Bengali, the stressaccent is thrown back as far as possible, and, to assist this, the succeeding syllables of the word are contracted or slurred over in pronunciation; but in the best Oriva every syllable is distinctly pronounced, and the accent is put on the penultimate syllable if it is a long one, and never further back than the antepenultimate. The Oriyā verbal system is at once simple and complete. It has a long array of tenses, but the whole is so logically arranged, and built on so regular a model, that its principles are easily impressed upon the memory. It is particularly noticeable for the very complete set of verbal nouns, present, past, and future, which take the place of the incomplete series of infinitive and gerund that we find in Bengali, and for want of which that language is sometimes driven to strange straits in order to embody what seems to us the simplest idea. When a Bengali wishes to express the idea embodied in what in Latin would be called the infinitive, he has to borrow the present participle for the occasion, and then has to employ it for all tenses, so that the word is used, in the first place, not as a participle, and, in the second place, not necessarily in the present tense. Oriva, on the other hand, simply takes the appropriate verbal noun, and declines it in the case which the meaning necessarily requires. As every infinitive must be some case of some verbal noun, it follows that Orivā grammar does not know the so-called 'Infinitive Mood' at all. The veriest beginner does not miss it, and instinctively makes up his 'infinitive' or his 'gerund' as he requires it. In this respect Oriya grammar is in a more complete stage of development than even Classical Sanskrit, and can be compared only with the old Sanskrit of the Vedic times. This archaic character, both of form and of vocabulary, runs through the whole language, and is no doubt accounted for by its geographical position. Orissa has ever been an isolated country bounded on the east by the ocean, and on the west by hilly tracts inhabited by wild aboriginal tribes, and bearing an evil reputation for air and water. On the south, the language is Dravidian, and belongs to an altogether different family, while, on the north, it has seldom had political ties with Bengal.

On the other hand, Orissa has been a conquered country. For eight centuries it was subject to the kings of Telinga, and, in modern times, it was for fifty years under the sway of the Bhoslas of Nagpur, both of whom have left deep impressions of their rule upon the land. On the language they have imposed a number of Telugu and Marathi words and idioms which still

survive. These are, so far as we know, the only foreign elements of importance that have intruded into Oṛiyā. There are also a few Persian words which have come from the Musalmāns and a small vocabulary of English court terms and the like, which English domination has brought into vogue. Oṛiyā has a fairly large literature, mainly composed of religious poetry, that relating to Krishna being most prominent. As a vernacular, it is almost confined to its proper home, though speakers of the language are found in various parts of India, where they are mainly either domestic servants or pālkī-bearers.

The province of Bihar was for centuries much more closely connected politically with the country which is now the United Provinces of Agra and Bihārī. Oudh than with Bengal. Even so long ago as the time of the composition of the Sanskrit epic of the Ramayana, Rama-chandra, the prince of Ayôdhyā (the modern Oudh), is represented as taking his famous bride, Sītā, from the country of Mithila, or the present North Bihar. The face of the Bihari is ever turned to the North-West; from Bengal he has experienced only hostile invasions. For these reasons, the language of Bihar has often been considered to be a form of the 'Hindi' said to be spoken in the United Provinces, but really nothing can be further from the fact. In spite of the hostile feelings with which Biharis regard everything connected with Bengal, their language is a sister of Bengali, and only a distant cousin of the tongue spoken to its west. Like Bengali and Oriyā, it is a direct descendant of the old Māgadha Apabhramsa. It occupies the original seat of that language, and still retains nearly all its characteristic features. In one particular of phonetics alone does it depart from its parent, namely in the pronunciation of the sibilants. This is accounted for by the political influence of the North-West. The pronunciation of these letters is a literal shibboleth between Bengal and Central Hindostan. A man who pronounces his s's as sh would at once be known as a Bengali and treated as such. The Bihārīs, therefore, in their desire, which has existed for several centuries, to sever all connexion with the people to the east, have striven after the pronunciation of the s's of the west, and have now acquired it; but that it is a comparatively modern innovation is clearly shown by the fact that, although they pronounce s, in the Kaithi national character they always write sh, and use the very character that the Hindû grammarians employed to illustrate the sh-sound which in their time was so characteristic of the tongue of Magadha.

Bihārī is not the vernacular of Bihar only, but is also spoken far beyond the limits

where spoken.

of that Province. To the west it is spoken in the eastern districts of the United Provinces, and even in a small portion of Oudh. Its western boundary may be taken as roughly the meridian passing through Benares, although it really extends a short distance beyond that city. On the south it is spoken in the two plateaux of Chota Nagpur. It extends from the Himalaya on the North to Singhbhum (an Oriyā-speaking district) on the South, and from Manbhum on the South-East to Basti in the North-West. The total area covered by it is about 90,000 square miles, or 3,000 more than that of Yugo-Slavia, and the number of its speakers (thirty-seven millions) is a little less than that of the population of Italy. The linguistic boundaries are Bengali to its East, the Himalayan tongues to its North, Eastern Hindī to its West, and Oriyā to its South.

Bihārī has three main dialects: Maithilī, Magahī, and Bhojpurī. Each of these

fifteenth century. Vidyāpati Thākur, who lived about that time, was a Sanskrit writer of some repute, and one of his works, translated into Bengali, was for many years the terror of examinees in the latter language. But it is upon his dainty songs in his own vernacular that his fame chiefly rests. He was the first of the old Master Singers whose short religious poems, dealing principally with Rādhā and Krishna, exercised such potent influence on the faiths of Eastern India. His songs were adopted and enthusiastically recited by the celebrated Hindū reformer Chaitanya (flourished sixteenth century), and, through him, became the house poetry of the Lower Provinces. Numbers of imitators sprang up, many of whom wrote in Vidyāpati's name, so that it is now difficult to separate the genuine from the imitation, especially as in the great collection of these songs which is the accepted authority in Bengal, the former have become altered in the course of generations to suit the Bengali idiom and metre. Vernacular literature has also had several dramatic authors in Darbhanga, the local custom being to write the body of a play in Sanskrit but the songs in Maithilī. There have also been some epic poems, of which at least one has survived in part.

Magahī is spoken in South Bihar and in the Chota Nagpur District of Hazaribagh which covers the northern of the two plateaux of that Province. It does not extend to the southern plateau, of which, as we shall see, the language is a form of Bhojpurī. It has no written literature, but Carey translated the New Testament into it in 1818 and some folktales and songs have been collected and printed. The northern part of the locality in which Magahī is now spoken corresponds to the ancient Magadha, and was therefore the head-quarters of the ancient Māgadha Apabhramśa.

Bhojpuri is properly speaking the language of Bhojpur, the name of a town and pargana in the north-west of the District of Shahabad. It connotes, however, the language spoken over a much wider area. It occupies the whole of West Bihar and of the eastern districts of the United Provinces. It also covers the District of Palamau, and the southern, or Ranchi, plateau of Chota Nagpur. It varies according to locality, the tongue of Azamgarh and Benares differing somewhat from that of Shahabad and Saran, another division of forms being between the Bhojpuri spoken north, and that spoken south, of the Ganges. It has one important sub-dialect, the Nagpuriā of Chota Nagpur, and natives also recognize, by

Nagpuriā. Madhēsī. Sarwariā. Tharuī.

Maithilī.

using separate names, the Madhēsī Bhojpurī spoken in Champaran, the Sarwariā of Basti and the neighbourhood, and the Tharuī, or broken dialect spoken by the hill tribes of the Himalaya, but these are refinements of small importance.

[:] See note to page 145.

The three main sub-dialects are the Standard, the Western, and Nagpuriā. Western

Bhojpurī is frequently called 'Pūrbī', or ' the Language of the East' par excellence. This is naturally the name given to it by the inhabitants of Western Hindostan, but has the disadvantage of being too indefinite. It is used very loosely, and often includes languages which have nothing to do with Bhojpurī, simply because they are spoken to the 'East' of those who refer to them. Bhojpurī has a very small literature, all written in the last few years. One or two portions of the Scriptures have been translated into it.

These three dialects fall naturally into two groups, namely Maithili and Magahi on the one hand and Bhojpuri on the other. The speakers are Relationship of the dialects to each other. three also separated by ethnic peculiarities, but Maithili and Magahi and the speakers of these two dialects are much more closely related to each other than either of them is to Bhojpuri. I shall here content myself with noting the most characteristic differences which at once strike the casual observer. In pronunciation Maithili, and to a less degree Magahi, is much rounder than Bhojpuri. In Maithili, the vowel a is pronounced with a broad sound approaching the 'o in hot' colour that it possesses in Bengali. Bhojpuri, on the contrary, pronounces the vowel with the clear sharpcut tone which we hear all over central Hindostan. On the other hand, it also possesses a long drawled vowel which is sounded like the aw in 'awl'. The contrast between these two sounds is so very marked, and is of such frequent occurrence, that in each case it gives a tone to the whole dialect which is recognized at once. In the declension of nouns, Bhojpuri has an oblique form of the genitive case, which is wanting in the other dialects. The polite pronoun of the second person, which is frequently heard in conversation, is apane in Maithili and Magahi, but raure in Bhoipuri. The verb substantive in Maithili is usually chhai or achhi, he is. In Magahi it is usually haï, and in Bhojpurī bāṭē, bāṛē, or hâwē. The three dialects all agree in forming the present tense by adding the verb substantive to the present participle, exactly as in other modern Indian languages; but Magahī has also a special form of the present, dēkha hai, exactly equivalent to the English 'he is a-seeing', and so has Bhojpuri another form dekhû-la, the literal meaning of which is doubtful. The whole system of verbal conjugation is amazingly complex in Maithili and Magahi, but is as simple and straightforward in Bhojpuri as it is in Bengali or Hindi. There are many other minor differences between the three dialects, but the above are those which are most characteristic and striking. Suffice it to say, further, that Maithili and Magahi are dialects of nationalities that have carried conservatism to the excess of uncouthness, while Bhojpuri is the practical language of an energetic race, which is ever ready to accommodate itself to circumstances, and which has made its influence felt all over India.

The last remark brings us to the consideration of the ethnic differences between the speakers of Maithilī and Magahī on the one hand, and those who speak Bhojpurī on the other. These are great. Mithilā, a country with an ancient history, traditions of which it retains to the present day, is a land under the spiritual dominion of a sept of Brāhmans extraordinarily scrupulous in regard to the mint, anise, and cummin of the law. For centuries it has been too proud to admit other nationalities to intercourse on equal terms, and has suffered conquest after conquest, from the north, from the east, and from the west, without changing its

BIHĀRĪ. 151

ancestral traditions. The story goes that at the marriage of Rama, the Brahmans of Mithila showed the same uncivilized pride characteristic of their descendants in the twentieth century. This Brahmanical domination has left ineffaceable marks upon the nature of the rest of the population. Mithila, or Tirhut, is one of the most congested parts of India. The inhabitants increase, and multiply, and impoverish the earth, nor will they seek other means of life than agriculture, or other lands on which to practise the one art with which they are acquainted. Magadha, on the other hand, although it is intimately connected with the early history of Buddhism, was too long a cockpit for contending Musalman armies, and too long directly subject to the head-quarters of a Musalman province, to remember its former glories of the Hindu age. A great part of it is wild, barren, and sparsely cultivated, and over much of the remainder cultivation is carried on only with difficulty by the aid of great irrigation works spread widely over the country, and dating from prehistoric times. Its peasantry, oppressed for centuries, and even now, under British rule, poorer than that of any neighbouring part of India, is uneducated and unenterprising. There is an expressive word current in Eastern Hindostan which illustrates the national character. It is 'bhades', and has One is 'uncouth', 'boorish', and the other is 'an inhabitant of Magadha.' Which meaning is the original and which the derivative, I do not know; but a whole history is contained in these two syllables.

The Bhojpuri-speaking country is inhabited by a people curiously different from They form one of the fighting nations of the others who speak Bibārī dialects. Hindostan. An alert and active nationality, with few scruples and considerable abilities, dearly loving a fight for fighting's sake, they have spread over Aryan India, each man ready to carve his fortune out of any opportunity that may present itself. have in former times furnished a rich mine of recruitment to the Hindostani army, and, on the other hand, they took a prominent part in the mutiny of 1857. As fond as the Irishman of a stick, the long-boned, stalwart Bhojpuri, with his staff in hand, is a familiar object striding over the fields far from his home. Thousands of them have emigrated to British Colonies and have returned rich men; every year still larger numbers wander over Northern Bengal, and seek employment, either honestly as pālkī-bearers, or, otherwise, as dacoits. The larger Bengal landholders each keep a posse of these men euphemistically termed 'darwans', to hold his tenants in order. Such are the people who speak Bhojpuri, and it can be understood that their language is a handy article, made for current use, and not too much encumbered by grammatical subtilties.

Throughout the Bihārī area, the written character is that known as Kaithī. This written character. script is used over the whole of Hindostan alongside the more complete and elegant Nāgarī. Practically speaking the former may be looked upon as the current hand of the latter, although epigraphically it is not a corruption of it, as is thought by some. Kaithī is the official character of two widely distant countries, Bihar and Gujarat, and a Tirhut Paṭwārī finds little difficulty in reading a Gujarātī book. The Brāhmans of Tirhut employ a special character of their own, called the Maithilī script. It closely resembles that used for Bengali, but differs from it just enough to make it at first sight rather puzzling to read.

Bengali is the language of the Gangetic Delta, and of the country immediately to its north and east. It is spoken by forty-two millions of people, approximately equivalent to the population France. North of the Ganges its western boundary may be taken as the River Mahānanda in the east of the District of Purnea. South of the Ganges it reaches up to the foot of the Chota Nagpur plateaux. It covers the greater part of the District of Midnapur, and that tract of Singhbhum which is known as Dhalbhum. To the east, it runsa short way up the Assam Valley, taking in about half the District of Goalpara, and, in the Surma Valley, it covers the whole of Sylhet and Cachar, as well as Mymensingh and Dacca, although here the ground is partly occupied by Tibeto-Burman languages, whose speakers are met with in scattered colonies. Further south, it is spoken in Noakhali and Chittagong, and even in parts of the Hill Tracts of the latter District and of Arakan. To its north it has the Tibeto-Burman languages of the Himalaya, to its west Bihārī, to its south-west Oriya, and to its east Tibeto-Burman languages and Assamese. south it is bounded by the Bay of Bengal. In no other speech of India is the literary tongue so widely divorced from that of ordinary conversation as in Bengali The two can almost be spoken of as distinct languages, rather than as two dialects of the same language. Up to the last thirty years hardly anything was known about the actual speech of the forty odd millions who were recorded in the census tables as having Bengali for their vernacular. Even European grammarians, most of whom were missionaries and ought to have known better, were the obedient slaves of the Pandits of Calcutta, and illustrated only the artificial book language in their works. Beames was the first, and I believe the only, writer in the concluding decades of the last century to draw attention to the necessity of putting on record what the people really spoke. Since then the Linguistic Survey has succeeded in exploring the Bengali dialects with considerable success, and a band of writers headed by the eminent Rabindranath Tagore is creating a taste for a chaster prose style in which the classical Bengali of the last century is skilfully blended with the forms of modern everyday speech.

In dividing this language into dialects, the lines of cleavage may be either borizontal or perpendicular; adopting the former method we get the literary dialect on the one hand, and the true vernacular on the other. The former is practically the same all over Bengal, but is used only in books and newspapers, or when speaking formally. On other occasions, speakers of Bengali sink back into a more or less refined version of the second dialect.

The result of the influence of the old school of Fandits upon Bengali may be illustrated by taking a passage of narrative English, and substituting a Latin word for every noun that occurs. Theoretically the nouns should be in Anglo-Saxon, but, to an Englishman, Latin more nearly holds the position of a learned language that Sanskrit does in India. As an example I give a verse or two of the Parable of the Prodigal Son, with a Latin word (gender and case being usually neglected) substituted wherever the Bengali version employs a Sanskrit one, --'A certain vir had two filiuses. And the junior alius medio of them said to lis pater, "pater give me the pars of the substantia that falleth to me," And he made divisio unto them of his proprius facultas. And not multus dies after the junior filius made omnis substantia collectus and became peregre profectus into a regio longinquus.' In this the Latin words are taken from Beza's translation. No wonder that a Bengali villager starts and stares in the witness box when asked to repeat (and expected to understand) a form of asseveration couched in language analogous to the above. I have known a village woman break into hysterical giggles when asked to repeat the form of asseveration which has, under the orders of the Calcutta High Court, to be tendered to every witness before he or she gives evidence in a judicial proceeding.

BENGALI. 153

Between these two, there is not merely the same difference as that which exists between the language of the educated and that of the uneducated, say, in England. The dissimilarity is much greater. The literary departs from the colloquial dialect, not only in having a highly Sanskritized vocabulary, but also in its grammatical forms. The grammar of literary Bengali is nowhere used in conversation. The colloquial forms are much contracted. Words which, in the literary language, pronounced ore rotundo, have four syllables, are in this reduced to two, so that a mere knowledge of the former is of little assistance towards understanding or speaking the latter.

The lines of perpendicular cleavage affect only the colloquial form of Bengali. There are several dialects of this, but the change from one to another is so gradual that

it is impossible to say where anyone of them begins or ends. We may, however, recognize two main branches, a Western and an Eastern. The Western includes the standard dialect spoken round Calcutta and Hooghly, the curious south-western dialect spoken in central Midnapore, and the Northern Bengali used north of the Ganges, between Purnea and Rangpur. In Western Bengal, there is a Western dialect which has been affected by the neighbouring Bihārī, and we also, in the same locality, find some broken forms of speech employed by the hill tribes. The principal of these is the Māl Pahāriā of the Santal Parganas and Birbhum, which used to be thought to be a Dravidian language, but which the Survey has shown to be a corrupt Bengali.

In Northern Bengal, the Tibeto-Burman Koches have long abandoned their own language, but traces of it are found in the Bengali that they speak, which increase as we go eastwards towards their original home on the Brahmaputra. In Purnea, the Bengali used is much mixed with the adjoining Maithilī Bihārī, and the Kaithī character of Bihar is even used for recording the Bengali language.

The Eastern branch of Bengali may be taken as having the District of Dacca for

its centre, where what may be called Standard Eastern Bengali is spoken. The true eastern dialect is not spoken west of the Brahmaputra, though, when we cross the river, coming from Dacca, we meet a well-marked form of speech in Rangpur and the

districts to its north and east. It is called Rājbangśī, and, while undoubtedly belonging to the eastern branch, has still points of difference which lead us to class it as a separate dialect. In the Darjeeling Tarai it is known as Bāhē. The characteristic signs of Eastern Bengali are first noticeable in the Districts of Khulna and Jessore, and are found all over the eastern half of the Gangetic Delta. It then extends in a north-

Chākmā

easterly direction following the valleys of the Megna and its affluents over the Districts of Tippera, Dacca, Mymensingh, Sylhet, and Cachar. In every direction its further progress is stopped by the hills which bound these regions, and throughout the Surma Valley and in Mymensingh, we also find a mongrel dialect spoken by some of the less civilized tribes, called Haijong or Hajong, which is a mixture of Bengali and Tibeto-

Survey. Haijong **5,0**€0

Burman languages. Along the eastern littoral of the Bay of Bengal there is a south-western dialect also of the type, and inland there is another curious dialect, called Chākmā, spoken by tribes of the Chittagong Hill Tracts. This last has a written character of its

own, similar to, but more archaic than, the one used for writing Burmese. Another mongrel language is Daingnet. .20,000 Some people claim it to be Bengali, but the latest cata-

loguers put it down as a corrupt form of Chin, and as such it is recorded in these pages.1 Some remarks must be made regarding the manner in which the many Sanskrit

words used in the literary dialect are pronounced in Bengali. Bengali pronunciation. It should be remembered that these words are just as foreign to the language as Latin words are to French, or as French words are to English, and Bengalis pronounce their Sanskrit words much in the way that Englishmen speak 'Frenche ful fayre and fetisly, after the scole of Stratford atte bowe.' During the period in which the Prakrits represented the spoken language of India, the vocal organs of the Indo-Aryan were incapable of pronouncing without difficulty letters and sounds which had been easy to their forefathers. As they pronounced them differently, they spelt them differently, and owing to the records left by the Hindu grammarians we know how they did pronounce them. When they wanted to talk of the Goddess of Wealth, whom their ancestors had called Lakshmi, they found that it cost them too much trouble to pronounce kshm, and so they simplified matters by saying, and writing, Lachchhi or, dialectically, Lakkhi. Again, when they wanted to ask for cooked rice, which their forefathers called bhakta, they found the kt too hard to pronounce, and so said, and wrote, bhatta, just as the Italians find it difficult to say factum, and say, and write, fatto. Again, some of them could not pronounce an s clearly, so they had to say sh. When they wanted to talk of the sea, they could not say sagara, but said, and wrote, shagara or shagara. As a last example, if they wanted to express the idea conveyed by the word 'external,' they could not say bahya, and so they said, and wrote, bajjha. Now, I have already explained that the modern Bengali is descended from an Apabhramsa closely connected with that very Magadhi Prakrit from which the above examples are all taken. The very same incapacities of the vocal organs exist with Bengalis now, that existed with their predecessors a thousand years ago. A Bengali cannot easily pronounce kshm any more than they could. He cannot pronounce a clear s, but must make it sh. The compound letter hy beats him, and instead he has to say jjh. These are only a few examples of facts which might be multiplied indefinitely. Nevertheless, a Bengali when he borrows his Sanskrit words writes them in the Sanskrit fashion, which is, say, at least two thousand years out of date, and then reads them as if they were Māgadhi Prakrit words. He writes Lakshmī, and says Lakkhī. He writes sāgara, and says shāgar, or, if he is uneducated, shāyar. He writes bāhya, and says In other words, he writes Sanskrit, and from that writing reads another

¹ Ante, p. 77.

ASSAMESE. 155

language. It is exactly as if an Italian were to write factum, when he says fatto, or as if a Frenchman were to write the Latin sicca, while he says sèche, or as if he were to write the Latin de horâ in ab ante, and read it dorénavant. The outcome of this state of affairs is that, to a foreigner, the great difficulty of Bengali is its pronunciation. Like English, but for a different reason, its pronunciation is not represented by its spelling. The vocabulary of the modern literary language is largely Sanskrit, and few of these words are pronounced as they are written. Bengalis themselves struggle vainly with a number of complicated sounds, which the disuse of centuries has rendered their vocal organs unable, or too lazy, to produce. The result is a maze of half-pronounced consonants and broken vowels not provided for by their alphabet, amid which the unfortunate foreigner wanders without a guide, and for which his own larynx is as unsuited as is a Bengali's for the sounds of Sanskrit.

Bengali has a genuine popular literature extending from at least the fifteenth century to the end of the eighteenth. Since then the so-called 'revival of learning' has galvanized into a vigorous existence the Bengali literature of the present day, at first largely based on English models, containing many excellent works and some few of genius, but, as a rule, not popular in the true sense of the word. Of the earlier writers, perhaps Chaṇḍī Dās and Mukunda Rām are the two whose writings will best repay perusal. Their writings come from the heart and not from the school, and are full of passages adorned with true poetry and descriptive power. Extracts from the works of Mukunda Rām have been admirably translated into English verse by the late Professor Cowell.

The well-known Bengali character is a by-form of the Nāgarī type of Indian alphabets, which became established in Eastern India about the eleventh century of our era. Varieties of it are used for Assamese, and by the Brāhmans for the Maithilī dialect of Bihārī.

Assamese is the last of the speeches of the Outer Sub-Branch. As its name implies, it is the language of the Assam Valley, over the whole of which it is the only Aryan tongue, except in the extreme west, where, in the District of Goalpara, it merges into Bengali. Elsewhere it is surrounded entirely by Indo-Chinese or Austric languages. The influence of these non-Aryan languages has not been great. A few words have been borrowed, and one or two old Aryan forms (such as the use of pronominal suffixes) have been retained, owing to

the existence of somewhat similar idioms prevailing among the neighbouring tribes. Western Assamese differs slightly from that spoken at the eastern end of the Valley, but the only true dialect is Mayang or Bishnupuriya, spoken by a Hindu colony in the State of Manipur and by scattered members

of the same tribe in Sylhet and Cachar. From its geographical position we should expect Mayang to be a dialect of Bengali, rather than of Assamese, and it would not be wrong to class it as the former; but I place it under Assamese, as it has several of the typical characteristics of that language. We may also mention a mongrel trade language, which has developed

at the foot of the Garo Hills under the name of Jharwā. It is a 'pigeon' mixture of Bengali, Garo, and Assamese. The Assamese are a homestaying race, and the only localities in which their language is found spoken by any considerable number of people outside the Assam Valley are the hills of that province, and the Bengali-speaking Districts of Sylhet and Cachar.

Like Oriyā, Assamese is a sister, not a daughter, of Bengali. It comes from Bihar, through Northern Bengal, not through Bengal proper. It was, nevertheless, once hotly argued whether Assamese was a dialect of Bengali or not. A great deal of this is a mere question of words which is capable of being discussed ad infinitum. The words 'dialect' and 'language' are no more capable of mutually exclusive definition than are 'variety' and 'species' or 'hill' and 'mountain.' It may be admitted that Assamese grammar does not differ to any considerable extent from that of Bengali; but, if we apply another test, that of the possession of a written literature, we can have no hesitation in maintaining that Assamese is entitled to claim an independent existence as the speech of an independent nationality, and to have a standard of its own, different from that which a native of Calcutta would wish to impose upon it.

Assamese differs most widely from Bengali in its pronunciation. It has, besides the usual sound of a as that of o in 'hot,' a long drawled a Assamese compared with something like the sound of o in 'glory.' Little distinc-Bengali. tion is made between long and short vowels, accent having, as in modern Greek, everywhere superseded quantity. No difference is made between the cerebral and dental consonants, both being sounded as semi-cerebrals like the English The consonants ch and chh have the sound of s in 'sin,' and j that of z in t and d. 'azure.' On the other hand the letter s is pronounced with a peculiar guttural sound approaching that of ch in 'loch.' The declension of nouns does not differ materially from that of colloquial (not literary) Bengali, but the conjugation of verbs has many characteristic features in points of detail that need not here be mentioned. The Assamese vocabulary, even when used in literature, is much more free from Tatsamas than is that of Bengali.

The Assamese have just reason to be proud of their national literature. In no department have they been more successful than in history, Literature. a branch of study in which the rest of India is, as a rule, curiously deficient. The chain of historical events for the past six hundred years has been carefully preserved, and their authenticity can be relied upon. These historical works, originally written in imitation of the chronicles kept by the Ahom conquerors of the country, and still called by their Ahom name, are numerous and voluminous. According to the custom of the country, a knowledge of these histories was an indispensable qualification to an Assamese gentleman; and every family of distinction, as well as the government and public officers, kept the most minute records of contemporary events. But Assamese literature is by no means confined to history. Some seventy poetical works, principally religious, have been catalogued. One of the oldest poets, and at the same time most celebrated, was Śrī Śańkara Dēva, who flourished in the first half of the sixteenth century, and translated the Bhagavata Purana into Assamese. Other authors were Rāma Saraswatī, the translator both of the Mahābhārata and the Rāmāyana, and Mādhava, the author of the Bhakti-ratnāvali and other poems. The Hindū system ASSAMESE. 157

of medicine was professionally studied by numerous Assam families of distinction, and some knowledge of the science formed one of the necessary acquirements of a well-bred gentleman. Hence arose a good stock of medical works, principally translations or adaptations from Sanskrit into the vernacular. We know of at least forty dramatic works written during the past five hundred years, and many of these are still acted in the village nāmghars. The whole of the Scriptures was translated into Assamese by the Serampore missionaries in the year 1819, and several editions have since been issued. In later years, the American Baptist Mission Press has published a large number of works religious and lay, and has done much to keep the language pure and uncontaminated by the neighbouring Bengali.

The character used in writing Assamese is nearly the same as that employed for Written character.

Bengali. It has one sign, that to represent the sound of w, which is wanting in the alphabet of that language.

CHAPTER XIV.--INDO-ARYAN LANGUAGES. MEDIATE SUB-BRANCH.

We now come to that form of speech which is intermediate between the Outer and Inner linguistic Sub-Branches. It is the vernacular of the Mediate Sub-Branch. country in which the hero Rama-chandra was born; and

Eastern Hindi.

the Jain apostle Mahâvira used an early form of it to convey his teaching to his A development of the Prakrit of that tract, Ardha-Māgadhī, hence became the sacred language of the Jains, and its modern successor, Eastern Hindi, through

the influence of a great poetical genius, became the medium for celebrating the Gestes of Rāma, and, in consequence, the dialect used for at least half the literature of Hindostan.

Eastern Hindī, which includes three dialects, Awadhī, Baghēlī, and Chhattīsgaṛhī, occupies parts of six Provinces, namely, Oudh, the Province of Agra, Baghelkhand, Bundelkhand, Chota Nagpur, and the Central Provinces. It covers the whole of Oudh, except the District of Hardoi and a part of Fyzabad. In the Province of Agra it covers, roughly speaking, the country between Benares and Hamirpur in Bundelkhand. It occupies the

whole of Baghelkhand, the north-east of Bundelkhand, the west and the south-Sone tract of Mirzapur, the States of Chang Bhakar, Sirguja, Udaipur, Korea, and a portion of Jashpur in Chota Nagpur. In the Central Provinces it covers the Districts of

Jubbulpore and Mandla, and the greater part of Chhattisgarh with its Feudatory States. The three dialects of Eastern Hindi closely resemble each other. Indeed, Baghēli differs so little from Awadhi, that, were it not popularly Dialects recognized as a separate speech, I should be inclined to class it as a form of that dialect. Chhattisgarhi, under the influence of the neighbouring Marāthī and Oriyā, shows greater points of difference; but its close connexion with

The Awadhī-Baghēlī dialect covers the whole of Awadhi is nevertheless apparent. the Eastern Hindi area of the United Provinces and of Awadhi and Baghēli. Bundelkhand, Baghelkhand, Chang Bhakar, and the Districts of Jubbulpore and Mandla. It is also spoken by some scattered tribes in the Central Provinces to the south and west. If we wish to make a dividing line between Awadhī and Bagheli, we may take the river Jamna where it runs between Fatehpur and Banda, and thence the southern boundary of the Allahabad District. The boundary must, however, be uncertain, for there is hardly any definite peculiarity which we can seize upon as

a decisive test. Chhattisgarhi occupies the remaining area Chhattisgarhi. of the Eastern Hindi tract; that is to say, the States of Udaipur, Korea, and Sirguja, a portion of Jashpur, and the greater part of Chhattisgarh. As above described, Eastern Hindi occupies an irregular oblong tract of country, extending from, but not including, Nepal to the Bastar State in the Central Provinces, much longer from north to south than it is from east to west. Its mean length may be roughly taken as 750 miles, and its mean breadth as 250, which together give an area of about 187,500 square miles. The total number of speakers is about equal to the entire

In the Census returns, nearly all the speakers of Eastern Hindi are shown as speaking Western Hindi. In the returns, only 1,399,528 are shown for Eastern Hindi. The figures given above are corrected estimates.

population of Brazil, of Czecho-Slovakia and Yugo-Slavia combined, or of the United Provinces of Agra and Oudh.

Owing to the former prestige of the Lucknow Court, Awadhi is now also spoken as

A vernacular elsewhere than in the Eastern Hindi tract proper.

United Provinces and over the greater part of Bihar, the language of the Hindu majority of this tract being Bihāri. It is difficult to say how many of these Muslims do use Awadhi, but, so far as my information goes, I can estimate them as numbering about a million. Large numbers of speakers of Eastern Hindi are scattered all over Northern India. Putting aside the number of Oudh men who have travelled abroad in quest of service, there is our Indian Army which is largely recruited in that Province.

Eastern Hindī is bounded on the north by the languages of the Nepal Himalaya and on the west by various dialects of Western Hindī, of which the principal are Kanaujī and Bundēlī. On the east it is bounded by the Bhojpurī dialect of Bihārī and by Oriyā. On the south it meets forms of the Marāṭhī language.

It would take up too much space to examine fully the relationship which Eastern Hindi bears to the languages on its east and west. In its Position of Eastern Hindi with regard to languages of the Outer and Inner Sub-Branches. pronunciation it follows that of the west in the most important particulars, while in the declension of nouns (although it has typical peculiarities of its own) it in the main follows Bihārī. So also in the declension of its pronouns it follows the eastern languages; for instance, its possessive pronoun of the first person is $m\bar{o}r$, not $m\bar{e}r\bar{a}$. In the conjugation of verbs it occupies a true intermediate position. We have seen that the typical characteristic of the eastern languages in this respect is the use of personal terminations in the past tense, of which the base ends in l. Eastern Hindi does not use a participle in l, but does employ the same personal terminations as those which are found in Bihāri. For instance, the Western Hindī participle 'struck' is $m\bar{a}r\bar{a}$, which is a contracted form of $m\bar{a}ri\bar{a}$, while the Bihārī form is mārila. In the west, 'he struck' is mārā (i.e. māriā) without any termination. In Bihārī it is mārilas, with the termination s, meaning literally, 'by him'). Eastern Hindī takes the Western māriā, and adds to it the Bihārī termination s, so that it has māria-s, more usually pronounced māris. In the future tense it is still more mixed. Its first person commonly follows the Eastern fashion, and its third the Western. The second person wavers between the two. Thus, 'I shall strike' is the Eastern $m\bar{a}rab\bar{o}$, while 'he will strike' is the Western $m\bar{a}rih\bar{e}$. We thus see that Eastern Hindi occupies an intermediate position between the Central languages and those of the East, exactly like the 'Half-Magadhi' from which it is descended.

Two dialects of Eastern Hindi, Awadhi and Baghēli, have received considerable literary culture. Of these the Awadhi literature is by far the more important. The earliest writer of note in that dialect was a Musalmān, Malik Muḥammad of Jāyas (fl. 1540 A.D.), the author of the fine philosophic epic entitled the Padumāwati. This work, while telling in poetry of a high order the story of Ratan

Sen's quest for the fair Padmāvatī, of 'Alāu'ddīn's ruthless siege of the virgin city of Chitaur, of Ratan's valour, and of Padmāvatī's wifely devotion culminating in the terrible sacrifice of all in the doomed city that was true and fair, to save it from the lust of the Tartar conqueror, is also an allegory describing the search of the soul for the true wisdom, and the trials and temptations that beset it on its course. Malik Muḥammad's ideal of life was high, and throughout the work of the Muslim ascetic there run veins of the broadest charity and of sympathy with those higher spirits among his Hindū fellow countrymen who were groping in the dark for that light of which many obtained more than a passing glimpse.

Half a century later, contemporary with our Shakespeare, we find the poet and reformer Tulasi Das (d. 1623). This extraordinary man, Tulasi Dās. who, if we take for our test the influence that he exercises at the present day, was one of the half-dozen great writers that Asia has produced, deserves more than a brief reference. He is commonly known to Europeans as the author of a history of Rama, but he was far more than that. He occupies a position among the singers of the Rāma Saga peculiar to himself. Unlike the numerous religious poets who dwelt in the Dōāb, and whose theme was Kṛishṇa, he lived humbly in Benares, unequalled and alone in his niche in the Temple of Fame. Disciples he had in plenty,—to-day they are numbered by millions,—but imitators, none. Looking back through the vista of centuries we see his noble figure standing in its own pure light as the guide and saviour of Hindostan. His influence has never ceased, nay, it has ever kept increasing; and only when we reflect upon the fate of Tantra-ridden Bengal or on the wanton orgies that are carried out under the name of Krishna-worship, can we justly appreciate the work of the man who first in Northern India taught the infinite vileness of sin and the infinite graciousness of the Deity, and whose motto might have been-

> 'He prayeth best who loveth best All things both great and small.'

But Tulasī Dâs did not only teach this elevated system of religion,—he succeeded in getting his teaching accepted. He founded no sect, laid down no dogmatic creed, and yet his great work is at the present day the one Bible of ninety millions of people, and fortunate it has been for them that they had this guide. It has been received as the perfect example of the perfect book, and thus its influence has been exercised not only over the unlettered multitude, but over the long series of authors who followed him, and especially over the crowd which sprang into existence with the introduction of printing at the beginning of the last century. As Mr. Growse says, in the Introduction to his translation of the Ramāyaṇa of this author, 'the book is in everyone's hands, from the court to the cottage, and is read and heard and appreciated alike by every class of the Hindu community, whether high or low, rich or poor, young or old.' importance of Tulasi Das in the history of India cannot be overrated. Putting the literary merits of his work out of the question, the fact of its universal acceptance by all classes, from Bhagalpur to the Panjab, and from the Himalaya to the Nerbudda, surely demands more than a polite acknowledgment of his existence. Half a century ago, an old missionary said to me that no one could hope to understand the natives of Upper India, till he had mastered every line that Tulasī Dās had written. I have since learned to know how right he was.

The result of the commanding position which this poet occupies in the literary history of India is that the Awadhī dialect in which he wrote has since been accepted as the only form of North Indian speech in which certain classes of poetry can be composed. For the past three centuries the great mass of Indian poetical literature has been inspired by one or other of two themes, the history of Rāma and the history of Kṛishṇa. The scene of the latter's early exploits was the central Doāb together with the District of Muttra to its south, and the Braj Bhākhā of that tract has been used as the means of recording it. But nearly all the vast literature dealing with Rāma has been composed in Awadhī. Nay, more, the use of Awadhī has extended, so that, excepting that devoted to the Kṛishṇa Saga, nine-tenths of all the poetry of North India have been written in it. Such, for instance, is the great translation of the Mahābhārata made at the commencement of the last century for the Mahārāja of Benares. The list of authors in this dialect is a long one, and their works include many of great merit.

The other form of Awadhī, Baghēlī, has also a considerable literature. Under the enlightened patronage of the Kings of Rewa, a school of poets arose in that country, whose works still enjoy a considerable reputation. These were, however, rather the products of scholars and critics who wrote about poetry than of poets themselves. The critical faculty was finely developed, but the authors were not 'makers' in the true sense of the word.

CHAPTER XV.-INDO-ARYAN LANGUAGES. INNER SUB-BRANCH.

We now come to the consideration of the Inner Sub-Branch. The languages of this

Sub-Branch fall into two groups, the Central and the Pahārī. The Central Group includes Western Hindī, Pañjābī, Rājasthānī, Gujarātī, Bhīlī, and Khāndēśī.

Western Hindi covers the country between Sahrind [Sirhind] in the Panjab and Allahabad in the United Provinces. This almost exactly corresponds to the Madhyadēśā or 'mid-land' referred to above a the two wars home of the Indo-Arran words. It is through this land that the

as the true, pure home of the Indo-Aryan people. It is through this land that the mysterious River Sarasvatī of Indian legend flows underground, from where it disappears in the sands of the Eastern Panjab to the Prayāg, near Allahabad, where it mingles its waters with those of the Jamna and the Ganges. On the north, Western Hindī extends to the foot of the Himalaya, but on the south it does not reach much beyond the valley of the Jamna, except towards the east, where it occupies most of Bundelkhand and a part of the Central Provinces. The number of its speakers (thirty-eight millions) is the same as that of the population of Italy and four millions more than that of England. It has several recognized dialects, of which the principal are Hindōstānī, Braj Bhākhā,

Kanaujī, and Bundēlī, to which we may add the Bāngarū of the South-Eastern Panjab. Of these, Hindōstānī is now the recognized literary form of Western Hindī, and it will be more convenient to consider it last. The home of Braj Bhākhā is the Central Dōāb

Braj Bhākhā. and the country immediately to its south from near Delhi to, say, Etawah, its head-quarters being round the town of

Mathurā [Muttra]. South and west of the Jamna it is also spoken in Gurgaon, in the States of Bharatpur and Karauli, and in the north-west of the Gwalior Agency. To the west and south it gradually merges into Rājasthānī. For more than two thousand years Mathurā has been one of the most important centres of Indo-Aryan civilization. Here also tradition places the earthly scenes of the earlier life of the famous god Kṛishṇa. It was thus natural that the dialect of this country,—the direct descendant of the old Prakrit of Śūrasēna, should be used for literature. In the Sanskrit dramas, the ordinary conversation in prose of women of the upper classes was couched in Śaurasēnī Prakrit, and a variety of the same dialect was employed by the Digambara Jains for their sacred books. In ancient times a part of Śūrasēna was known as Vraja, i.e., the country of the cow-pens, and from this is derived the modern appellation of Braj, with its language

¹ Sec note to p. 158. 2 These Census figures include many speakers of Lahnda, wrongly classed under Pañjabi.

³ See p. 117.

known as Braj Bhākhā. The most important writer in the modera vernacular was the blind bard Sūr Dās, who flourished in the middle of the sixteenth century. As Tulasī Dās sang of Rāma, so Sūr Dās sang of Kṛishṇa, and between them, according to Indian opinion, they have exhausted all the possibilities of poetic art. Many are the traditions of minor poets who were unable to produce a single line which was not to be found already existing in the works of one or other of these two masters of song. To the European mind there can be little comparison between the two. Sūr Dās was a voluminous author who sang in one key, a sweet one it is true, while Tulasī Dās, besides being a great reformer who rose superior to dogma and to creeds and who refused to found a sect, was a master of the whole gamut of human passion. Sūr Dās was not only one of the founders of a sect, but was also the creator of a school of poets whose theme was Kṛishṇa, and especially the youthful Kṛishṇa, the companion of the herd-girls of Mathurā, —a school which still exists and still expresses itself through the medium of Braj Bhākhā. The most celebrated of his followers was Bihārī Lāl (early part of the seventeenth century), the author of the famous Sat Saī, or Seven Centuries of perfectly turned couplets.

Kanaujī is the dialect of the lower Doāb from about Etawah to near Allahabad.

Opposite the ancient town of Kanauj, from which it takes its name, it has also spread across the Ganges into the District of Hardoi and further north. It is nearly related to Braj Bhākhā, being really little more than a sub-dialect of that form of speech. It has received small literary cultivation, being completely overshadowed by its more powerful neighbour, but the Serampore missionaries used it for one of their translations of the New Testament in the early part of the last century. If we may trust the evidence of their translation, the dialect has since then lost several old historical forms which existed in Kanaujī a century ago, and which are still found in some of the Rājasthānī dialects and in the Khas of Nepal.

Bundēlī is the dialect of Western Hindī spoken in Bundelkhand and the neighbourhood, including not only the Bundelkhand Agency, but also Jalaun, Hamirpur, and Jhansi, together with the eastern portion of the Gwalior Agency. It is also spoken in the adjoining parts of Bhopal, and in the Damoh, Saugor, Seoni, and Narsinghpur, and parts of the Hoshangabad and Chhindwara Districts of the Central Provinces. Banda, though politically in Bundelkhand, does not speak Bundēlī. Here the language is mixed, but is in the main Baghēlī. Bundēlī has a small literature dating from the time of Chhattar Sāl of Panna and his immediate predecessors of the early part of the eighteenth century. The Serampore missionaries translated the New Testament into it. The city of Mahoba is within Bundelkhand, and hence it follows that the most famous folk-epic of northern India, the Lay of Ālhā and Ūdan, which deals with the fortunes of Mahoba and its capture by Prithīrāja of Delhī, is sung by wandering bards in the Bundēlī dialect.

These three dialects, Braj Bhākhā, Kanaujī and Bundēlī, are all closely connected with each other, and are typically pure forms of the speech of the Inner Sub-Branch.

The Western Hindī spoken in the south-east of the Panjab has several local names, but it is everywhere the same dialect. In the Hariana tract of Hissar and Jind, it is recognized by Europeans under the name of Hariānī. They, however, call the same form of speech, when they meet it in Rohtak, Dujana, the country parts of Delhi District and Karnal, simply 'Hindī.'

Natives of the country sometimes call it Jāṭū, and sometimes Bāngarū, according to the caste of the people who speak it or to the tract in which it is spoken. Bāngarū, or the language of the Bāngar, the high and dry tract of the south-eastern Panjab west of the Ganges, appears to be the most suitable name by which to identify it. This form of Western Hindī has Pañjābī to its north and west, and Ahīrwāṭī and Mārwāṭī (both dialects of Rājāsthānī) to its south, and it is a mixture of the three languages, with Western Hindī as its basis. It does not extend farther north than Karnal. North of Karnal lies the District of Ambala, in the east of which the form of Western Hindī that we find spoken is the same as the Vernacular Hindōstānī of the Upper Dōāb which will now be described. In west Ambala we find Pañjābī.

As a vernacular, Hindōstānī is the dialect of Western Hindī which exhibits the language in the act of shading off into Pañjābī. It has the Western Hindī grammar, but the terminations are those that we find in Pañjābī. Thus, the true Western Hindī postposition of the genitive is kau, and the corresponding form in Pañjābī is $d\bar{a}$. The Hindōstānī dialect of Western Hindī takes the k of kau, but the termination \bar{a} of the Pañjābī $d\bar{a}$, and has $k\bar{a}$. So also all adjectives and participles. Hindōstānī must be considered under two aspects, (1) as a vernacular dialect of Western Hindī, and (2) as the well-known literary language of Hindostan and the lingua franca current over nearly the whole of India. As a verna-

cular, it may be taken as the dialect of Western Hindī spoken in the Upper Gangetic Dōāb, in Rohilkhand, and in the east of the Ambala District in the Panjab. It is spoken in its greatest purity round Mēraṭh [Meerut] and to the north. In Rohilkhand it gradually shades off into Kanaujī, and in Ambala into Pañjābī. In the rest of the Eastern Panjab the language is Bangarū except in Gurgaon where Vernacular Hindòstānī merges into Braj Bhākhā, which may be considered to be established in the east of that District. In this neighbourhood, save in a few minor particulars, the language is practically the same as that taught in the usual Hindōstānī

grammars.¹ It is not, however, as the vernacular of the Upper Doāb that Hindostānī is generally known. To Europeans it is the polite speech of India generally, and more especially

of Hindostan. The name itself is of European coinage, and indicates the idea that is thus suggested, it being rarely used by Indians except under European influence. As a lingua franca ² Hindostānī grew up in the bazaar attached to the Delhi Court, and was carried everywhere in India by the lieutenants of the Mughul Empire. Since then its seat has been secure. It has several varieties, amongst which may be mentioned Urdū, Rēkhta,

Dakhinī, and Hindī. Urdū is that form of Hindōstānī which is written in the Persian character, and which makes a free use of Persian (including Arabic) words in its vocabulary. The name is said to be derived from the Urdū-ĕ-muʻalla or royal military bazaar outside the Delhi

It will be noticed that this account of Hindostānī and its origin differs widely from that which has been given hitherto by most writers, which was based on Mīr Amman's preface to the 'Bāgh o Bahār.' According to him Urdū was a mongrel mixture of the languages of the various tribes who flocked to the Delhi Bazaar. The explanation given above was first put terward by Sir Charles Lyall in the year 1880, and the Linguistic Survey has shown the entire correctness of his view. Hindostānī is simply the vernacular of the Upper Dōāb, on which a certain amount of literary polish has been bestowed, and from which a few rustic idioms have been excluded

² I use this word for want of a better term, though it is not strictly accurate. Properly speaking, a *lingua franca* is a hybrid tongue employed as an international language. But, though used as an international language, Hindöstäni is not a hybrid. I know of no other convenient English expression that nearly enough indicates the required idea.

HINDÖSTĀNĪ. 165

palace. It is spoken chiefly in the towns of western Hindostan, by Musalmans and by Hindus who have come under the influence of Persian culture. Persian vocables are it is true, employed in every form of Hindostani. We find them even in the correspondence of Prithīrāja, who ruled in Delhi before the Muslim conquest of India. words have been admitted to full citizenship even in the rustic dialects, or in the elegant Hindi of modern writers like Harischandra of Benares. To object to their use would be but affected purism, just as would be the avoidance of the use of all words of Latin origin in English. But in what is known as high Urdu, the use of Persian words is carried to almost incredible extremes. In writings of this class we find whole sentences in which the only Indian thing is the grammar, and with nothing but Persian words from beginning to end. It is curious, moreover, that this extreme Persianization of Hindostānī is, as Sir Charles Lyall rightly points out, not the work of conquerors ignorant of the tongue of the people. On the contrary, the Urdū language took its rise in the efforts of the ever pliable Hindu to assimilate the language of his rulers. Its authors were Kayasths and Khatris employed in the administration and acquainted with Persian, and not Persians or Persianized Turks, who for many centuries used their own language for literary purposes. To these is due the idea of employing the Persian character for their vernacular speech, and the consequent preference for words to which that character is native. 'Persian is now no foreign idiom in India, and though its excessive use is repugnant to good taste, it would be a foolish purism and a political mistake to attempt (as some have attempted) to eliminate it from the Hindū literature of the day.' I have made this quotation from Sir Charles Lyall's work, in order to show what an accomplished scholar has to say on one side of a much debated question. That the general principle which he has enunciated is correct, no one will, I think, dispute. Once a word has become domesticated in Hindostani no one has any right to object to its use, whatever may be its origin, and opinions will differ only as to what words have received the right of citizenship and what have not. This, after all, is a question of style, and in Hindostani as in English, there are styles and styles. For myself, I far prefer the Hindostani from which words whose citizenship is in any way doubtful are excluded, but that, I freely admit, is a matter of taste.

Rēkhta (i.e. 'scattered' or 'mixed') is the form which Urdū takes when used by men, especially when employed for poetry. The name is derived from the manner in which Persian words are 'scattered' through it. When poems are written in the special dialect used by women, which has a vocabulary of its own, it is known as Rēkhtī.

Dakhini is the form of Hindóstāni used by Musalmāns in the Deccan. Like Urdú, it is written in the Persian character, but is much more free from Persianization. It retains grammatical forms (such as $m\bar{e}r\bar{e}\ k\bar{o}$ for $mujh\ k\bar{o}$) which are common among the rustics of Northern India, but which are not found in the literary dialect, and in some localities does not use the agent case

¹ English is being introduced into the Indian vernaculars in the same way. A horse-doctor once said to me about a dog licking his wound, 'kuttē-kā saliva bahut antiseptic hai,' and Dr. Grahame Bailey has heard one Panjābī dentisi say to another busy over one of his victims, 'continually excavate na karō.' The 1911 Census Report of the United Provinces (p. 284) quotes an Indian Wakīl, or Attorney, saying in Court, 'is position-kā incontroveitible proof de saktā hū. aur mērā opinion yeh hai ki defence-kā argument water-hold nahī kar saktā hai.

² Sketch of the Hindustani Language (Edinburgh, 1880), p. 9.

with $n\bar{e}$ before transitive verbs in the past tense, which is a characteristic feature of all the dialects of Western Hindostan.

The word 'Hindi' is used in several different meanings. It is a Persian, not an Indian, word, and Persian writers used it to denote a native Hindi. of India, as distinguished from 'Hindū' or non-Musalmān Thus Amīr Khusrau says, 'whatever live Hindū fell into the king's hands was pounded into bits under the feet of elephants. The Musalmans who were Hindis had their lives spared.' In this sense (and in this way it is still used by natives of India) Bengali and Marathi are as much Hindi as the language of the Doab. On the other hand, Europeans use the word in two mutually contradictory senses, viz., sometimes to indicate the Sanskritized, or at least the non-Persianized, form of Hindostānī which is used as a literary form of speech by Hindus, and which is usually printed in the Nagari character, and sometimes, loosely, to indicate all the rural dialects spoken between Bengal proper and the Panjab. In the present pages I use the word only in the former of these two meanings. This Hindi, therefore, or, as it is sometimes called, 'High Hindī,' is the prose literary language of those Hindūs who do not employ Urdū. It is of modern origin, having been introduced under English influence at the commencement of the last century. Up till then, when a Hindu wrote prose and did not use Urdū, he wrote in his own local dialect, Awadhī, Bundēlī, Braj Bhākhā, Vernacular Hindostani, or what not. Lallu this by writing the well-known Prēm Sāgar, a work which was, so far as the prose portions went, practically written in Urdu, with Indo-Aryan words substituted wherever a writer in that form of speech would use Persian ones. It was thus an automatic reversion to the actual vernicular of the Upper Doah. The course of this novel experiment was successful from the start. The subject of the first book written in it attracted the attention of all pious Hindus, and the author's style, musical and rhythmical as the Arabic saj', pleased their ears. Then, the language filled a want. It give a lingua franca to the Hindus. It enabled men of widely distant provinces to converse with each other without having recourse to the, to them, unclean words of the Musalmans. Everywhere it was easily intelligible, for its grammar was that of the language that every Hindu had to employ in his business relations with Government officials, and its vocabulary was the common property of all Indo-Aryan languages of northern India. Moreover, very little prose, excepting commentaries and the like, had been written in any modern Indian vernacular before. Literature had almost entirely confined itself to verse. Hence the language of the Prēm Sāgar became, naturally enough, the standard of Hindû prose all over Hindostan, from Bihar to the Panjab, and has held its place as such to the present day. Nowadays no Hindû of Upper India dreams of writing in any Indian language except Urdu or Hindi when he is writing prose; but when he takes to verse, he instinctively adopts one of the old national dialects, such as the Awadhi of Tulasi Das or the Braj Bhakha of the blind bard of Agra. Of late some attempts have been made to write poetry in literary Hindi, but I do not think that such attempts can have more than a small modicum of success. The tradition of a special language for poetry

¹ As a broad rule, Bombay Dakhinī and all that spoken north of the Satpuras employ $n\bar{e}$, while Madras Dakhinī does not

² Elliot, 'History of India,' iii, 539.

³ Lallū Lāl was not the first writer of this modern Hindī. He was preceded a few years by Sadal Miśra, and perhaps by others; but their writings fell stillborn, and have only of late years been revived by antiquarian students of Benares, in whom, unknown to them, has survived the traditional jealousy of Benares Paṇḍits against Lallū Lāl, the Gujarāti Brāhman.

HINDŌSTĀNĪ. 167

has taken deep root in India, and is well established. Such language is loved and easily understood by every one down to the humblest ploughman, and so long as the influence of such poets as Tulasī Dās prevails it will never fall into disuse.

Since Lallū Lāl's time Hindī has developed for itself certain rules of style which differentiate it from Urdū. The principal of these relate to the order of words, which is much less free than in that form of Hindōstānū. It has also, of late years, fallen under the fatal spell of Sanskrit, and is showing signs of becoming, in the hands of Paṇḍits, and under the encouragement of some European writers who have learnt Hindī through Sanskrit, as debased as literary Bengali without the same excuse. Hindī has so copious a vocabulary of its own, rooted in the very beings of the peasantry upon whose language it is based, that mine-tenths of the Sanskrit words which one meets in many modern Hindī books are useless and unintelligible excrescences. The employment of Sanskrit words is supposed to add dignity to the style. One might as well say that a graceful girl of eighteen gained in dignity by masquerading in the furbelows of her great grandmother. Some enlightened Indian scholars are struggling hard, without displaying any affected purism, against this too easily acquired infection, and we may hope that their efforts will meet with the encouragement that they deserve.

We may now define the three main varieties of Hindostānī as follows:—Hindostānī is primarily the language of the Northern Doah, and is also Hindostānī, Urdū, and Hindī. the lingua franca of India, capable of being written both in the Persian and the Nagari characters and, without purism, avoiding alike the excessive use of either Persian or Sanskrit words when employed for literature. The name 'Urdū' can then be confined to that special variety of Hindostānī in which Persian words are of frequent occurrence, and which therefore can only be written with ease in the Persian character; and, similarly, 'Hindi' can be confined to the form of Hindostani in which Sanskrit words abound, and which therefore is legible only when written in the Nāgarī character. These are the definitions which were proposed by the late Mr. Growse, and they have the advantage of being intelligible, while at the same time they do not overlap. Hitherto, all these words have been very loosely employed. Finally, I use 'Eastern Hindi' to connote the group of intermediate dialects of which Awadhi is the chief, and 'Western Hindi' to connote the group of dialects of which Braj Bhākhā and Hindöstäni (in its different phases) are the best known examples.

Rēkhta, for they are poetical works. Its cultivation began in the Deccan at the end of the sixteenth century, and it received a definite standard of form a hundred years later, principally at the hand of Wali of Aurangabad, commonly called 'the Father of Rēkhta.' The example of Wali was quickly taken up at Delhi, where a school of poets took its rise of which the most brilliant members were Saudā (d. 1780), the author of the famous satires, and Mīr Taqī (d. 1810). Another school, almost equally celebrated, arose at Lucknow during the troubled time at Delhi in the middle of the eighteenth century. The great difference between the poetry of Urdū and that written in the various dialects of Eastern or Western Hindī lies in the system of prosody. In the former, the prosody is that of the Persian language, while in the latter it is the altogether opposed indigenous system of India. Moreover, the former is entirely based on Persian models of composition, which

are quite different from the older works from which the native literature took its origin. Urdu prose came into existence, as a literary medium, at the beginning of the last century in Calcutta. Like Hindi prose, its earliest attempts were due to English influence, and to the need of textbooks in both forms of Hindostani for the College of Fort William. The Bā qh o Bahār of Mir Amman, and the Khirad Afroz of Hafizu'ddin Ahmad are familiar examples of the earlier of these works in Urdū, as the already mentioned Prēm Sāgar written by Lallū Lāl is an example of those in Hindī. Since those days both Urdu prose and Hindi prose have had a prosperous course, and it is unnecessary to dwell upon the copious literature that has poured from the press in the last century. Muḥammad Ḥusain (Azād) and Pandit Ratan Nāth (Sarshār) are probably amongst the most eminent writers of Urdū prose, while in Hindī the late Harischandra of Benares by universal consent holds the first place. As already explained, Hindi, as defined above, has hardly any poetical literature. Such as there is is confined to what are little more than experiments carried out during the past few years. All the great Hindū poetical works are written in one or other of the Eastern or Western Hindī dialects. There are several excellent modern Urdū poets, of whom the most celebrated is probably Altaf Husain (Hali), whose Quatrains have been admirably translated into English by the late Mr. G. E. Ward.

Panjabi is spoken over the greater part of the eastern half of the Province of the Panjab, in the northern corner of the Rajputana State of Pañjābì. Bikaner, and in the southern half of the State of Jammu. It is bounded on the north and north-east by the Western Pahārī of the lower ranges of the Himalaya, on the east by Western Hindi,—in East Ambala by the Vernacular Hindostānī, and in the country immediately to the west of the Jamna by the Bāngarū dialect,—on the south by the Bagri and Bikaneri dialects of Rajasthani, and on the west by Lahnda. In describing the last-named language I have dealt at some length on the mutual relationship between it and Panjabi. I explained that the whole Panjab was the meeting ground of two distinct forms of speech, viz., the old Outer language strongly influenced by Dardic, if not actually Dardic, which expanded from the Indus Valley eastwards, and the old Midland language, the parent of modern Western Hindi, which expanded from the Jamna Valley westwards. In the Panjab these overlapped. In the Eastern Panjab the wave of Dardic with the old Lahnda had nearly exhausted itself, and the old Western Hindi had the mastery, the resultant language being Panjābī, while in the Western Panjab the old Western Hindi had nearly exhausted itself, the resultant language being modern Lahnda. It is thus impossible to draw any clear dividing line between Pañjābī and Lahndā, and all that we can do is to take the 74th degree of East Longitude as a conventional frontier between the two forms of speech, with the understanding that this is an attempt to define a state of affairs that is essentially indefinite. On the other hand the line between Western Hindi and Pañjābi is more distinct, and may be taken as the meridian passing through Sahrind | Sirhind |. The net result is that we may say that the language of the extreme Eastern Panjab is Western Hindi, that of the Western Panjab is Lahnda, and that of the Central and East Central Panjab is Pañjābī.

¹ See pp. 135, 138.

PAÑJĀBĪ. 169

The mixed character of the languages of the Central and Western Panjab (Pañjābī and Lahnda) is well illustrated by the character given to the The Panjab of old time. inhabitants of these tracts by a hostile writer in the Mahābhárata, and by incidental references in the grammar of Pănini. Although not distant from the holy Sarasvati, the centre from which Sanskritic civilization spread, we learn that the laws and customs of the Panjab were at a very early period widely different from those of the Midland. The people are at one time described as living in a state of kingless anarchy, and at another time as possessing no Brahmans (a dreadful thing to an orthodox Hindū), living in petty villages, and governed by princes who supported themselves by internecine war. Not only were there no Brahmans, but there were no castes, or else it was possible for a man of one caste to adopt another. The population had no respect for the Veda, and offered no sacrifices to the gods. They were rude and uncultivated, given to drinking spirituous liquor, and eating all kinds of flesh. Their women were large-bodied, yellow, extremely immoral in their behaviour, and seem to have lived in a condition of polyandry, a man's heir being not his son, but the son of his sister.1 That this account was true in every particular need not be urged. It was given to us by enemies; but, whether true or not, it illustrates the gulf in regard to habits, customs, and language, that existed between the Midland and the Panjab.

Pañjābī is spoken by thirteen millions of people, a number equivalent to the

			ī	Dialects.		population of Czecho-Slovakia. It has two

being considered to be the purest. Its proper national character is the Landā or 'clipped' alphabet also in use for Lahndā, and described above on p. 138. As elsewhere, this is seldom legible to anyone except the writer, and not always to him. According to tradition, Angada (1538-52), the second Sikkh Guru, found that the hymns of his religion when written in this character were liable to be misread, and he accordingly improved it by borrowing signs from the Nagarī alphabet and by polishing up the forms of the existing

Gurmukhī alphabet. $\frac{\text{letters.}}{Gurmukh\bar{\iota}}$, or that which proceeds from the mouth of the Guru. This Gurmukhī alphabet is the one now used for printed texts employed by the Sikkhs of the Panjab, and is also used by Hindūs of the same country. Musalmāns, as a rule, prefer the Persian alphabet.

Pōgrī is the dialect of Pañjābī spoken in the State of Jammū and in the adjoining parts of the Panjab proper. It closely resembles the Standard dialect. It differs mainly in the forms used in the declension of nouns, and in its vocabulary, which is influenced by Lahndā and Kāshmīrī.

¹ Can the author of this description have had the customs of the Jatts in his mind when writing?

² These Census figures are excessive. Many people are included in them who ought to have been shown under Lahnda.

VOL. 1, PART 1.

It has a written character of its own, allied to the Landa of the Panjab plains and called Takkarī, the name of which is probably derived from that of the Takkas, a tribe whose capital was the famous Sākala, a town which the late Dr. Fleet identified with the modern Sialkot.

Pañjābī has a small literature, mainly consisting of ballads and folk-epics. These include several cycles of considerable extent, the most Literature. important of which are those referring to the famous hero Rājā Rasālū, to Hīrā and Rānjhā, and to Mirzā and Sāhibā. The version of the Hīrā and Rānjhā legend by Wāris Shāh is considered to be a model of the purest Pañjābī. It is immensely popular, and gramophone records of selected passages find a ready sale throughout the country.1 The contents of the Sikkh Granth, The Sikkh Granth. though written in the Gurmukhi character, are mostly in old Hindi, only a few of the hymns, though some of these are the most important, being composed in Pañjābī. Of late years a small prose Pañjābī literature has sprung up with the introduction of the art of printing. The Serampur missionaries translated the New Testament and portions of the Old into Standard Pañjābī, and the New Testament alone into Bhatneri, a mixed dialect spoken on the borders Pañjābi spoken abroad. of Bikaner. Pańjābi is the vernacular of our Sikkh soldiers, and is hence found not only in many parts of India, but is even heard in distant China, where Sikkh police are employed in the Treaty Ports.

Of all the languages connected with the Midland, Panjābī is the one which is most free from borrowed words, whether Persian or Sanskrit. While capable of expressing all ideas, it has a charming rustic flavour characteristic of the homely peasantry that employ it. In many respects it bears much the same relationship to Hindī that the Lowland Scotch of the poet Burns bears to Southern English.

Directly south of Pañjābī lies Rājasthānī, with eighteen and a quarter million speakers, equivalent to about half the population of England Rājasthānī and Gujarātī. and Wales. Just as Pañjābī represents the expansion of the Midland language to the north-west, so Rājasthānī represents its expansion to the south-In the course of this latter expansion, the Midland language, passing through the area of Rājasthānī, reaches the sea in Gujarat, where it becomes Gujarātī. Rājasthānī and Gujarātī are hence very closely connected, and are, in fact, little more than variant dialects of one and the same language.2 There are many traditions of migration from the Midland into Rajputana and Gujarat, the first mentioned being the foundation of Dvārakā in Gujarat, at the time of the war of the Mahābhārata. According to Jain tradition, the first Chaulukya ruler of Gujarat came from Kanauj in the Gangetic Dōāh, and in the ninth century A.D. a Gurjara-Rājpūt of Bhīlmāl or Bhīnmāl, in Western Rajputana, conquered that city. The Rathaurs of Marwar say that they came thither from Kanauj in the twelfth century. The Kachhwāhās of Jaipur claim to come from Oudh, while another tradition makes the Chaulukyas come from the Eastern Panjab.

An English translation by G. C. Usborne appeared as a supplement to "The Indian Antiquary." The first instalment came out with the number for April 1921, of Volume L.

The differentiation of Gujarātī from the Marwārī dialect of Rājasthānī is quite modern. We have poems written in Marwar in the fifteenth century which were composed in the mother language that later on developed into these two forms of speech

RĀJASTHĀNĪ. 171

The close political connexion between Rajputana and Gujarat is shown by the historical fact that the Gahlōts of Mewar came thither from the latter tract. That some Rājpūt clans are descended from Gurjara immigrants is now admitted by most scholars, who maintain that one of their centres of dispersion in Rajputana was in, or near, Mount Abu. These appear to have entered India with the Hūṇas and other marauding tribes about the sixth century A.D., and rapidly rose to great power. They were in the main a pastoral people, but had their chiefs and fighting men. When the tribe became of consequence the latter were treated by the Brāhmans as equivalent to Kshatriyas, and given the title of Rājaputras or Rājpūts, i.e., 'Sons of Kings.' Some were even admitted to equality with the Brāhmans themselves, but the bulk of the tribe which still followed its pastoral avocations remained as a subordinate caste under the title of Gurjaras, or, in modern language, Gūjars.

As its name indicates, Rājasthānī is the language of Rājasthān, in the sense given to that word by Tod. It is spoken in Rajputana and the western portion of Central India, and also in the neighbouring tracts of the Central Provinces, Sind, and the Panjab. To the east it shades off into the Bundēlī dialect of Western Hindī in the Gwalior State. To its north it merges into Braj Bhākhā, in the States of Karauli and Bharatpur and in the British District of Gurgaon. To the west it gradually becomes Pañjābī, Lahndā, and Sindhī, through the mixed dialects of the Indian desert, and, directly, Gujarātī in the State of Palanpur. On the south it meets Marāṭhī, but, this being an Outer language, does not merge into it.

Rājasthān is a tract divided amongst many States and many tribes, and it has hence many closely related dialects. No less than fifteen variations of the local speech have been counted in the Jaipur State alone. Omitting minor local differences, there are some twenty real dialects spoken over the area of which Rājasthānī is the vernacular. An examination of them

Rājasthānī.	Survey.	Census of 1921

shows that they fall into four main groups, which may be called Mārwārī, the Central Eastern Group (of which the typical dialect is Jaipurī), the North-Eastern Group (of which the typical dialect is Mēwātī), and Mālvī, and these may be taken as the four main dialects of the language. In addition to these we may also notice Nīmādī, Labhānī, and Gujarī. By far the most important of the Rājasthānī dialects, whether

we consider the size of the area in which it is vernacular, or the extent it has spread over India, is Mārwārī. Its home is Western Rajputana, including the great States of Marwar, Mewar, Bikaner, and Jaisalmir. It has many varieties, of which the best known are Thalī, or Western Mārwārī of the Desert, which extends well into Sind, the Mēwārī of the Udaipur State, Bīkānērī, and the Bāgrī of North-East Bikaner and the adjoining parts of the Panjab. The last is often considered a distinct dialect. The Shēkhāwāṭī of North-West Jaipur

¹These figures are probably too low. In the Census, some speakers of Rājasthānī were apparently put ander Western Hindī.

differs very little from the Mārwārī spoken in the east and centre of the adjoining State of Bikaner. Of the Central Eastern dialects, the most Central Eastern. important are Jaipuri and Hārautī. Jaipuri, as its name Jaipurī. implies, is the language of the State of Jaipur, and we know more about it than we do about any other form of Rajasthani. At the request of His Highness the Maharajah of Jaipur, an elaborate survey of all the various local dialects employed in the State was carried out by the Rev. G. Macalister, M.A., who has published the results in an admirable little volume. Hārautī. Hārautī is the dialect spoken by Hārā Rājpūts of Bundi and Kota, and extends eastwards over the border of the Gwalior State, where it merges into Bundeli. The principal North-Eastern dialect is Mewati North Eastern. Mēwātī. or Bighota, the language of the Meos, whose head-quarters Ahirwāţi. are in the State of Alwar. The Ahīrwātī or Hīrwātī spoken to the south and south-west of Delhi is a form of it. As might be expected, the dialects of this group are the forms of Rajasthani which most nearly approach Western Hindi. In Ahîrwatî we see it merging into the Bangaru dialect of that language, while in the Mēwātī of Alwar it is shading off into Braj Bhākhā. The Mālvī. head-quarters of Malvi are in the Malwa country round Indore, but it extends over a wide tract. To the east it reaches to Bhopal, where it meets Bundeli, and to the west it is stopped by the Bhil dialects spoken in the hills south of Udaipur. It also occupies the north-western Districts of the Central Provinces. A peculiar form of it, which is much mixed with Mārwārī forms, is called Rāngrī or Rājwārī, and is spoken by Rājpūts. In North Nimar and the adjoining portion of the Bhopawar Agency of Central India, Malvi has become so mixed with Khāndēšī and the Bhīl languages that it has become a new dialect, called Nīmādī, and possessing peculiarities of its own. Nimadi can, however, Nīmādī. hardly be called a true dialect, in the sense in which we call Mārwārī, Jaipurī, Mēwātī, and Mālvī dialects of Rājasthānī. It is rather a mixed patois made up of several languages, with Malvi for its basis.

Labhānī or Banjārī is the language of the Banjārās, a well-known tribe of carriers who are found all over Western and Southern India. They are also called Labhānās. In many parts of India they use the language of the people of the country in which they happen to dwell, but in Berar, Bombay, the Central Provinces, the Panjab, United Provinces, and the Central Indian Agency, they have a language of their own, the name of which varies according to the local name of the tribe. Everywhere it is a mixed form of speech, but, throughout, its basis is some western form of Rājasthanī, the other element consisting of borrowings from the speech of the locality where the members of the tribe happen to be found. It may here be mentioned that two other tribal dialects have been found on examination

MĀRWĀŖĪ. 173

to be the same as Labhānī. These are Kakērī and Bahrūpiā.

Kakērī is the language of the Kakērs, a small tribe of combmakers who emigrated from Ajmer in Rajputana some two hundred years ago and
settled in the District of Jhansi in the United Provinces.
The Bahrūpiās or Mahtams are now found in the Panjab
Districts of Gujrat and Sialkot. They say that they came thither from Rajputana with
Rājā Mān Singh on the occasion of his expedition to Kabul in the year 1587, and then
settled in the localities where they are now found. It is probable that they were
originally a sub-tribe of the Labhānās.

The mention of the Gujari dialect opens up an interesting period of Indian history. We have already seen that the Gurjaras, the ancestors of the present Güjars, probably entered India in the fifth or sixth century A.D., and that some of their fighting men became recognized as Rajputs. We shall see, in dealing with the Pahari languages, that in ancient times the present Districts of Kumaun and Garhwal together with the country to their west including the Simla Hills was known as 'Sapādalaksha,' and that this tract was partly occupied by these Gurjaras in the course of their immigration. Thence certain of the Gurjaras descended into the plains, crossed the Gangetic Valley, and entered Mewat, whence they spread over Eastern Rajputana, and acquired its language. In after years certain of these Rajputana settlers again migrated towards the north-west, and invaded the Panjab from the south-east. They left a line of colonists extending from Mewat, up both sides of the Jamna Valley, and thence, following the foot of the Himalaya, right up to the Indus. Where they have settled in the plains they have abandoned their own language, but as we enter the lower hills we invariably come upon a dialect locally known as Gujarī. In each case this can be described as the language of the people nearest the local Gujars, but badly spoken, as if by foreigners. The farther we go into these sparsely populated hills the more independent do we find this Gujari, and the less influenced by its surroundings. At length, when we get into the wild hill-country of Swat and Kashmir, we find the nomad Güjars, here called Gujurs (if cowherds) or Ajirs (if shepherds), still pursuing their original pastoral avocations and still speaking the descendant of the language that their ancestors brought with them from Mewat. But this shows traces of its long journey. It contains odd phrases and idioms of the Hindostani of the Jamna Valley, which were picked up en route and carried to the distant hills of Dardistan.

The only dialect of Rājasthānī which has a considerable recognized literature is

Mārwāṣī. Numbers of poems in Old Mārwāṣī or Þiṅgal, as
it is called for poetical purposes, are in existence, but have
not as yet been seriously studied. Besides this there is an enormous mass of literature
in other forms of Rājasthānī. I allude to the corpus of Bardie Histories described in
Tod's Rajasthan, the accomplished author of which was, until the lat few years,
probably the only European who had read any considerable portion of them. Since then,

of late years a survey of these chronicles has been undertaken by the Asiatic Society of Bengal, under the auspices of the Government of India, and considerable progress had been made in cataloguing them and in publishing texts, when the work was interrupted by the lamented death of Dr. L. P. Tessitori, the learned Italian scholar in whose immediate charge it was. Since then the project has been in abeyance. The most important chronicle of all, the *Prithōrāj Rāsau* of Chand Bardāi, has also lately been made available to students by the publication, under the care of the Nāgarī Prachārinī Sabhā of Benares, of the complete text with an abstract in Hindī. A few episodes of it have also been translated into English by Beames and by Hoernle. It is written in an old form of Western Hindī—not in Rājasthānī—also used by Rājpūt bards for poetical purposes, and known as Pingal, and, as we have it now, probably contains spurious additions; but it is nevertheless a wonderful storehouse of Rajputana history and legend. The Serampore Missionaries translated the New Testament into Hāṣauṭī (a Central Eastern dialect), Ujainī (i.e., Mālvī), Udaipurī (i.e., Mēwāṛī, a form of Mārwāṛī), Mārwāṛī, Jaipurī, and Bīkānērī (another form of Mārwāṛī).

At the time of the great war of the Mahabharata, the country known as that of the Panchalas extended from the river Chambal up to Hardwar Characteristics of the lanat the foot of the Himalaya. The southern portion of it. therefore, coincided with Northern Rajputana. We have already seen 1 that the Panchalas seem to have been one of these tribes who were the earliest Aryan invaders of India, and that, therefore, it is probable that their language was one of those which belonged to the Outer Circle of Indo-Aryan languages. If this is true, it is, a fortiori, also true of the rest of Rajputana more to the south. The theory also further requires us to conclude that, as the Aryans who spoke the languages of the Inner Sub-branch expanded and became more powerful, they gradually thrust those of the Outer Circle who were to their south, still farther and farther in that direction. In Gujarat, the Inner Aryans broke through the retaining wall of the Outer tribes and reached the sea. There are traditions of several settlements from the Midland in Gujarat, the first mentioned being that of Dvārakā ia the time of the Mahābhārata war. The only way into Gujarat from the Midland is through Rajputana. The more direct route is barred by the great Indian desert. Rajputana itself was occupied in comparatively modern times by invaders from Central Hindostan. As previously stated, the Rathaurs have a tradition that they abandoned Kanauj in the Doab late in the twelfth century A.D., and then took possession of Marwar. The Kachhwāhās of Jaipur claim to have come from Oudh, and the Solankis from the Eastern Panjab. Gujarat itself was occupied by the Yadavas, members of which tribe still occupy their original seat near Muttra. The Gahlots of Mewar, on the other hand, are, according to tradition, a reflex wave from Gujarat, driven into the neighbourhood of Chitor after the famous sack of Vallabhi. We thus see that the whole of the country between the Gangetic Doab and the sea-coast of Gujarat has at present among its occupants a large number of people who are members of tribes that immigrated from the Midland. These originally found there other Aryan tribes previously settled, who, in their turn, belonged to what I call the Outer Circle, and whom they either absorbed or drove farther to the south, or both. This is exactly borne out by the linguistic conditions of this tract. Rajasthani and Gujarati are both, on the whole, languages of the Inner Sub-branch, but they show many traces of forms which are

¹ Ante, p. 116.

RĀJASTHĀNĪ. 175

characteristic of languages of the Outer Band. A few may be mentioned here. In pronunciation, Gujarātī, like Sindhī, Marāthī, and Assamese, prefers the sound of δ to that of au. Thus, the Hindōstānī $chauth\bar{a}$, fourth, is $ch\bar{\delta}th\bar{\delta}$ in Sindhī, Rājasthanī, and Gujarātī. Again, like Sindhī, both Rājasthānī and Gujarātī have a strong preference for cerebral sounds instead of dentals. Like Sindhī and other North-Western languages, vulgar Gujarātī pronounces s as h. So also do the speakers of certain parts of Rajputana. Like all the eastern languages and Marāṭhī, but unlike the Inner languages, both Rājasthānī and Gujarātī nouns have an oblique form ending in \bar{a} . Under the head of Sindhī we have shown how a past participle in l, which is peculiarly characteristic of the languages of the Outer Sub-Branch, is also found in Gujarātī. Finally, in the conjūgation of verbs, both Gujarātī and Rājasthānī, like Lahndā, have a future whose characteristic is the letter s.

Rājasthānī uses the Nāgarī character for its literature. For ordinary purposes it has a corrupt form of that script allied to the Laṇḍā of the Panjab. This is known as Mahājanī, or the alphabet of the mercantile class, and is well-nigh illegible to everyone except its writer. It omits nearly all the vowels, and the stories about the consequent misreadings are among the most popular chestnuts of Indian folklore.

Rājasthānī, in the form of Mārwārī, can be heard all over India. There is hardly a town where the 'thrifty denizen of the sands of Western and Northern Rajputana has not found his way to fortune, from the petty grocer's shop in a Deccan village to the most extensive banking and broking connexion in the commercial capitals of both East and West India.'

¹ In the Baroda Census Report for 1921 (pp. 289ff.) Mr. Satyavrata Mukerjea criticizes the theories enunciated above. and maintains that 'the present position of languages like Gujarāti is not so much the result of the superior impact of the Madhyadesa on the Outer Band, as of the reverse.' I am not convinced by his arguments, but, as a question of pure philology, the matter is not of great importance. He agrees that both Rajasthani and Gujarati are mixed forms of speech. possessing partly the characteristics of languages of the Outer Band, and partly those of the languages of the Midland: but when he would on this account class Gujarāti with Eastern Hindi, as a member of the Mediate Sub-Branch, I must part company with him. As he would arrange the Indo-Aryan languages, we have, first, in the centre, Western Hindi, the language of the Midland. Surrounding it in a ring are a number of mixed languages, -on the east, Eastern Hindi; on the south, Rajasthani (with Gujarati), on the west, Panjabi; and, on the north, the Pahari languages of the Himalaya These are all intermediate between Western Hindi and the Outer languages, forming a bridge between the two. Round and outside these mixed languages, we have, again, a ring of Outer languages,—Bihārī, Oriyā, Marāṭhī, Sindhī, and Lahndā. There is thus a centre, surrounded by a band of mixed languages, and that again surrounded by an outer band. If we give the name 'Intermediate languages' to the mixed band, I offer no objection. Indeed, on various occasions, when not writing for scientific publications, I have used the same arrangement myself. It has the advantage of being systematic and of being easily comprehended. But the term 'Mediate Sub-Branch' has in these pages been given a different connotation, and one which compels us to include under that name Eastern Hindi, and Eastern Hindi alone. Under that heading it is impossible to include such languages as Rajasthani and Gujarati. It is true that, like them, Eastern Hindi is to a certain extent a bridge between Western Hindi and an Outer language, but it is not a mixed language like the other two. It has had an independent growth from prehistoric times, and has developed a grammar altogether different whather we compare it with Western Hindi or with any Outer language. On the other hand, the grammars of Rajasthani and of Gujarati are in their essence the same as that of Western Hindi. Particular postpositions or terminations may vary, but the ground basis of the three languages is identical in all. That there are also in Gujarāti certain peculiarities inherited from the language of the Outer Sub-Branch which it superseded cannot be denied, and it is the presence of these which makes us insist on its mixed character. But neither here nor in Rajasthani has there been such a development on independent lines as would entitle us to look upon either as a member of the Meliate Sub-Branch. This is not the place to enter into the details of the argument, and I therefore content myself with referring those interested to the conjugation of the verb, on the one hand in Eastern Hindi, and, on the other hand, in Western Hindi, Rajasthani and Gujarati. A comparison of the two systems will at once show the impossibility of putting Rajosthani or Gujarati into the same linguistic group as Eastern Hindi.

² P. 140, arte.

As already stated, Gujarātī is closely related to Rājasthānī. So late as the fifteenth century 1 Marwar and Gujarat had one common language, Gujarāti. which has since then split up into these two languages and of which both originally formed little differing dialects. Where spoken. Gujarati is spoken in the British Province of Gujarat and in Baroda and the other neighbouring Indian States. It extends south along the coast of the Arabian Sea to about Daman, where there is a mixed population, some speaking Marāthī, and some Gujarātī. The two languages have no intermediate dialect. On the north, it shades off into Sindhi, through the Kachchhi dialect of that language, although in Cutch (Kachchh) itself the standard dialect is employed for official and literary purposes. Still on the north, but to the east of Sindhi, it meets Marwari, into which, a little north of the Ran of Cutch, it gradually merges. On its east, it has the hill country, in which Bhīlī and Khāndēśī are spoken, and on its south it has Marāṭhī. The Bhil languages and Mārwārī, like Gujarātī, belong to the Inner Sub-Branch, and into these Gujarātī merges naturally, and without difficulty. The case of Sindhī is somewhat peculiar in this respect. Sindhi is an Outer language, and we have seen that the old language once spoken in Gujarat, but which has been superseded by the modern Gujarati, itself also belonged to the Outer Sub-Branch, and must have been closely related to Sindhī. I have said that Gujarātī merges into Sindhī through the Kachchhī dialect of that language. This is only partly true. Kachchhi, in its pure form, is not an intermediate dialect between the two languages. It is a form of Sindhi, with a varying mixture of Gujarātī words borrowed from Gujarātī-speaking neighbours. It is a mixed rather than an intermediate form of speech. The peninsula of Cutch is inhabited not only by Kachchhis but also by numerous immigrants from Rajputana and Gujarat. These latter retain their own respective languages, but corrupt them, in their turn, by borrowings from Kachchhi, so that the whole peninsula is polyglot, some of the population speaking what may be called a mongrel Sindhi, while others speak a mongrel Rajasthani or a mongrel Gujarati. In popular speech, all these mongrel dialects are lumped together under the general name of 'Kachchhi,' and on this understanding alone can it be said that Gujarātī merges into Sindhī through Kachchbī. As regards Marāthī, lying to the south of Gujarati, the matter is different. Here there is no merging, even in the sense in which we have used the term in regard to Kachchhī. There is difference of race, and the country on the borderline between the two forms of speech is bilingual. The two nationalities are geographically mixed, but each preserves its own tongue, the Gujarātīs speaking their own Inner Gujarātī, and the Marāthās speaking their own Outer Marāthī.

The only true dialectic variation of Gujarātī consists in the difference between the speech of the uneducated and that of the educated. That of the latter is the standard form of the language as taught in the grammars. That of the former differs from the standard mainly in pronunciation, although it possesses a few contracted verbal forms which are ignored by the literary

¹ In the year 1455-6 A.D. a poem called the Kāṇhaḍadēva-prabandha was written by a poet of Jhalor in the Marwar State. In the year 1912 there was a lively controversy in Gujarat as to whether this was written in old Gujarātī or in old Mārwārī. Really it is in neither, but is in the mother language, which in later years differentiated into these two forms of speech.

GUJARĀTĪ. 177

dialect. The differences of pronunciation are nearly the same over the whole Gujarātī tract, but, as a rule, though they are the same in kind, they are much less prominent in South Gujarat, and become more and more prominent as we go north. is of interest to note that in this pronunciation followed by the uneducated rural classes, we meet over and over again relics of the old Outer language superseded by modern Gujaráti. Such are, to quote two examples, the tendency to pronounce s as h, and the inability to distinguish between cerebral and dental letters, and there are many The Parsis and the Musalmans are generally credited with special dialects, but in pronunciation and inflexion these generally follow the colloquial Gujarātī of their neighbours. Most Musalmans in Gujarat speak Hindostani, but when they do speak Gujarâtî their language is noticeable for the entire disregard of the distinction between cerebrals and dentals. Here they only carry a local dialectic peculiarity to excess. In other respects, the Gujarāti of Pārsīs and of Musalmāns mainly differs from the ordinary colloquial language of the uneducated in its vocabulary, which borrows freely from Persian and (generally through Persian) from Arabic. Natives of the country give names (based upon caste-titles or upon the names of localities) such as Nāgarī, the language of the Nagar Brahmans, or as Charotari, the language of the Charotar tract on the banks of the Mahi, to various sub-divisions of these dialects, but the differences are so trifling that they do not deserve special mention, although the more important have been fully dealt with in the pages of the Survey. From the nature of the case it is impossible to give figures for the number of people speaking any one of these dialects or sub-dialects. We can say how many people belong to a certain tribe, or how many live in a certain tract, but we cannot say how many of them speak the standard dialect and how many speak the dialect of the uneducated. According to the estimates of the Survey, based on the Census of 1891, the number of speakers of all kinds of Gujarāti was 10,646,227 (about the same as the population of Persia), the corresponding figures of the Census of 1921 being 9,551,992.

We are fortunate in possessing a remarkable series of documents connecting the modern Gujarātī with the Apabhramsa from which History of the language. it is descended. The famous grammarian Hēmachandra (fl. 12th cent. A.D.), whose work is at the present day one of our great authorities on the various Prakrits, adorns the chapter dealing with Apabhramsa with numerous quotations from poems in the literary form of that language. Hemachandra himself was a native of Gujarat, and, while the examples given by him vary in dialect, some of them are almost the same as the old language from which are sprung the modern Mārwārī and the modern Gujarātī. As for the old Outer language which in ancient times was superseded by the parent of modern Gujarati, we know very little about it. It is probable that it was intermediate between the ancestor of modern Sindhī and the ancestor of modern Marāṭhī, and that we find traces of it not only in modern Gujarātī, but also in the Konkani dialect of Marathi. But Gujarat has been so overrun from the earliest times by nations hailing from many different parts of the world, that there is little hope of our being able to resuscitate any fragments of it with certainty. The present Gujarat nation is curiously composite, Greeks, Bactrians, Huns, and Scythians; Gurjaras, Jādējas, and Kāthīs; Pārsīs and Arabs, not to speak of soldiers of fortune from the countries of the West, have all contributed, together with the numerous Indo-Aryan VOL. I, PART I. 2 1)

immigrations, to form the population. In such a mixture it is wonderful that even the traces of the old Outer language that we have succeeded in identifying have survived.

Gujarātī has not a large literature, but it is larger than that with which it has sometimes been credited. The earliest, and at the same Literature. time the most famous, poet whose works have come down to us in a connected form was Narasimha Mehetō (or Narsingh Mehtā), who lived in the fifteenth century A.D. His poems, and those of a great number of later writers, have been collected and published in a poetical encyclopædia entitled the Brihat Kārya Dohana. There is also a considerable series of bardic chronicles, similar to those which we have described under the head of Rajasthani, on which is based Forbes's well-known $R\bar{a}s$ -mālā. Then, again, in addition to the long list of poets and poetesses whose lays are enshrined in the Brihat Kāvya Dōhana, there were writers on grammar and poetics. Of special interest for the history of the language are two works, the Mugdhāvabādhamauktika (1394 A.D.) of an anonymous writer, and the Kriyā-ratna-samuchchaya (1410 A.D.) of Gunaratna. These works are Sanskrit grammars for beginners, and as such are of little value. But they are written in the Gujarati of those days, and each Sanskrit grammatical form is given its equivalent in that language. Between them they thus furnish us with a systematic account of the grammar of the Gujarāti of the early fifteenth century. No such document exists for any other modern Indo-Aryan language. Through them we are able to trace the history of the growth of the Gujarātī tongue from the earliest Vedic times without a break, through Sanskrit, Prakrit, Apabhramsa, and the parent of Rājasthānī and Gujarātī, down to the articles of a Pārsī newspaper of the present day. We have grammatical documents for each stage of the long development.

The Nagari character was formerly used in Gujarat for writing books. Carey's translation of the New Testament, published at the beginning of the last century, was printed in that alphabet. For less important documents, that modification of the Nagari character known in Upper India as Kaithi, and very generally used there for similar purposes, was also employed. This is now the official character of Gujarat, as it is of Bihāri, and all books and papers in the language are printed in it.

Closely allied to Gujarātī and Western Rājasthānī are two important groups of dialects, each of which is entitled to the dignity of being considered a separate language. They are Bhīlī and Khāndēśī, the latter being also called Ahirāṇī or Dhēd Gujarī. Bhīlī is spoken in the range of hills between Ajmer and Mount Abu. Thence, in numerous dialects, it covers the hill country dividing Gujarat from Rajputana and Central India, as far south as the Satpura Range, and on the way it crosses the Narbada, up which it extends for a considerable distance. As its name implies it is the language of the Bhīls who inhabit this wild tract. South of the Satpuras lie the District of Khandesh and the Burhanpur Tahsil of Nimar, the latter forming a continuation of the Khandesh plain. Here Khāndēśī is spoken, and still further south, in the hill country leading up from Surat to Nasik, are found a number of wild tribes, such as Naikīs, Dhōdiās, Gāmatīs, and Chōdharīs, who employ dialects closely connected with it. Both Bhīlī and Khāndēśī show traces of a non-Aryan basis, which are too few to be certainly identified. This basis may have been

PAHĀŖĬ. 179

Munda or it may have been Dravidian,—perhaps more probably the former,—but has been completely overlaid by an Aryan superstructure, and they are both now thoroughly Aryan languages. Bhīlī may be looked upon as a bridge between Gujarātī and Rājasthānī, and might, with propriety, be looked upon as an eastern dialect of Gujarātī. The dialects appear under many names (no less than twenty-eight varieties have been examined in the Survey), but they are all essentially the same form of speech. Like some of the colloquial forms of Gujarātī it shows several points of agreement with the Outer languages of the North-West and even with Dardic.1 As we follow these dialects southwards, we find them borrowing more and more from the neighbouring Marathi, but this is borrowing only. It does not affect the structure of the language any more than the borrowing of Arabic or Persian words affects the structure of Hindostani. Khandesi, with its connected dialects, is of a similar character, but is more mixed with Marathi, which we find invading to a small extent the grammatical structure. On this account, and also because it is chiefly spoken in the Bombay Presidency, it is treated as an independent language, but, from the point of view of strict philology, it should not be separated from Bhili. Besides the Bhili spoken in its

Survey. Census of 1921 proper home, we also meet Bhīl dialects in Bhīlī 2,691,701 1,855.617 localities where we might little suspect them. Khāndēšī and dialects . 1,253,066 213,272 2 In far Orissa and the Bengal District of Midnapur, more than a thousand miles from the true home of the race, the Linguistic Survey has discovered a wandering tribe, known as Siyālgīrs, who speak a distinctively

Bhīl dialect. They perhaps left their own country for their country's good, for they are described as a tribe of thieving Bengal some six or seven generations ago, probably as jetsam from the tide of Marāṭhā invasion. The Bāwariās, a wild hunting tribe found in the Panjab, moreover, speak a form of Bhīlī which is known as Bāorī.

We must now leave Western India and consider the three Pahārī languages. The word 'Pahārī' means 'of or belonging to the mountain,' and Pahārī. is used as a convenient name for the three groups of Indo-Aryan dialects spoken in the lower ranges of the Himalaya, from Nepal in the east to Bhadrawah in the west. Before going into details it is advisable to state briefly what appears to have been the linguistic history of this tract. The earliest inhabitants of which we can mark any traces must have been people speaking a language akin to the ancestor of the modern Munda languages. These were superseded or conquered by Tibeto-Burmans who crossed the Himalaya from the north, and settled on its southern face. In this way the tract became inhabited by people speaking Tibeto-Burman languages, and so it has continued to the present day. But the original Mundas were not entirely swept out of existence, and the languages, although belonging to the Tibeto-Burman Sub-Family, incorporated many Munda idioms, which can still be easily recognized.3 In later times, these Tibeto-Burmans were not left isolated. The plains of India immediately to their south were inhabited by Aryans, and these worked northwards into the

3 Vide aute, pp. 35 & 55ff.

¹ It is quite possible that a form of Paiśāchī Prakrit was once spoken in the neighbourhood of the Bhil country, although the head-quarters of the language were in the north-west Panjab. See the remarks on p. 109.

² Apparently many speakers of Khāndēśi have been classed as speaking Bhīli or Marāṭ hī.

Himalaya, and settled in the more accessible valleys, bringing with them Aryan languages and civilization. Thus, in Nepal, before the Görkhā invasion, we find that a language akin to the Maithilī dialect of Bihārī, spoken immediately to the south, was used as a court language and we even have a play written in that language still surviving. But another, and, from the point of view of linguistics, more important infusion of Aryan languages came from the west.

West of the present kingdom of Nepal, in Kumaun, Garhwal, and the hills round Simla, there is a sub-Himalayan hill-tract known in Sanskrit times as 'Sapādalaksha,' or '(the country of) a lākh and a quarter (of hills).' The modern equivalent of this word,—sawā lākh,—still survives in the name of the well-known Siwalik Hills, south of Garhwal in the Saharanpur District. At the present day the bulk of the agricultural population of this Sapādalaksha consists, in the west, of Kanēts, and, in the east, of members of the Khas tribe. The Kanēts are divided into two clans, one called Khasiyā, which claims to be pure, and the other called Rāo (i.e., Rājā or Rājpūt), which admits that it is of impure birth. On the other hand, the chiefs of the country all claim to be of Rājpūt descent. We thus see that the whole of the modern Sapādalaksha contains many people who call themselves Khas or Khasiyā. That these represent the Khasas, Khasas, or Khasīras of

Sanskrit literature and the Káoioi of Greek geographers cannot be doubted. Like the Piśachas, from whose speech the modern Dardic languages are descended, they were said to be descended from Kaśyapa, the founder of Kashmir. In the Rajaturangini, the famous history of that country, they are frequently referred to as a thorn in the side of its rulers, and in the Mahābhārata they are often mentioned as a people of the north-west, and even as closely connected with the Piśachas, and with the people of Kashmir. They were Aryans, but had fallen outside the Aryan pale of purity. Other Sanskrit authorities, such as the Harivamsa, the Purānas, and the various lawbooks, all agree in placing them in the north-west. In later times they spread eastwards over the whole of Sapadalaksha, and conquered and absorbed the more fertile tracts, where we find them at the present day. Still later,—about the sixteenth century. they advanced, in the Görkhā invasion, into Nepal, and mixing with the Tibeto-Burmans or Mundas whom they found there, became the Khas or ruling tribe of that country. have seen that in ancient times these Khasas were associated with the Piśachas, and originally they must, like them, have spoken a Dardic language, for traces of that form of speech are readily found over the whole Sapadalaksha tract, diminishing in strength as we go eastwards.

In dealing with Rājasthānī ² reference has been made to the important part the

Gurjaras, or modern Gūjars, have played in the history of
Rajputana. These people seem to have appeared in India first
about the fifth or sixth century A.D. One branch of them occupied this Sapadalaksha
and amalgamated with the Khas population that they found in situ. In Western
Sapādalaksha they became the Rāo sept of the Kanēts, but were not admitted to equality
of caste with the older Khasiyā Kanēts. These Gurjaras were those who took to cultivation, or who adhered to their pastoral pursuits. The fighting mea were, as we have
seen, admitted into the Rājpūt caste. From Sapādalaksha, Gurjaras migrated across
the Gangetic Valley, to Mewat, and thence settled over Eastern Rajputana. In later

^{&#}x27; The Harischandrangitya, edited by Conrady in 1891.

² Pp. 171 and 173.

years, under the pressure of Musalmān rule, many of these Rājpūts remigrated to Sapādalaksha and again settled there. In fact there was continual intercourse between Sapādalaksha and Rajputana. Finally, as we have seen, Nepal was conquered by people of the Khas tribe, who were accompanied by many of these Gurjara-Rājpūts. It has long been recognized that all the Pahārī languages are at the present day closely allied to Rājasthānī, and the above historical sketch shows how this has come about.¹

The three Pan	arı	langu	lage	s. Survey. Ce	ensus of 1921.

The Pahāṛī Group of the Inner Sub-Branch of the Indo-Aryan languages consists of three groups of dialects, which may be called the Eastern Pahāṛī, the Central Pahāṛī, and the Western Pahāṛī languages respectively.

Eastern Pahārī is commonly called 'Nēpālī' or 'Naipālī' by Europeans, but this name is hardly suitable, as it is not the principal language of Nepal. In that State the principal languages are Tibeto-Burman, the most important being Nēwārī, the name of which is also derived from the word 'Nēpāl.' Other names for Eastern Pahārī are 'Parbatiyā' or 'the Hill language,' 'Gōrkhālī' or 'the language of the Gōrkhās,' and 'Khas Kurā' or 'the language of the Khas tribe.' It is not a language of British India, the homes of its speakers being in the State of Nepal, for which no census figures are available. The 143,721 speakers recorded in the Survey estimates refer to natives of Nepal who have come temporarily or permanently into British India. Many of them are soldiers in our Gōrkhā regiments.

The introduction of this Aryan language into Nepal is a matter of modern history. In the early part of the 16th century certain Rājpūts of Mewar, under pressure of Musalmān attacks, migrated north, and settled among their Khas and Gurjara relatives in Garhwal, Kumaun, and Western Nepal. In 1559 A.D. a party of these conquered the town of Görkhā (say 70 miles north-west of Kāṭhmāṇḍū). In 1768 Prithvī Nārāyaṇa Shāh of Görkhā made himself master of the whole of Nepal, founded the present Görkhäli dynasty, and introduced as the language of the court the mixed Rajasthani and Khas tongue that he had brought from Gorkha. This has since been the Aryan language of Nepal, superseding the older dialect, akin to the old Maithili, which had previously been the form of Aryan speech used in that country. The bulk of the population of Nepal being Tibeto-Burman, the Khas conquerors have been in a minority, and there has been a mixture not only of race but of language. Eastern Pahārī has borrowed some of its vocabulary and even some of its grammatical idioms from Tibeto-Burman languages, and although distinctly related to Rājasthāni, it now presents a somewhat mixed character. Not only many words but special phases of its grammar, such as the use of the agent case before all tenses of a transitive verb, and the employment of a complete honorific conjugation, are plainly borrowed from the speech of the surrounding Tibeto-Burmans. These changes in the speech are increasing with every decade, and certain Tibeto-Burman peculiarities have come into the language within the memory of men alive at the present day.

¹ The whole question is worked out in detail in the Introduction to Volume IX, Part iv, of the Survey. It is impossible here to give more than the general results.

² In the Cersus, most of the speakers of Central Pahārī have been shown under Western Hindi. It is impossible to adjust the figures.

Eastern Pahāṛī being spoken in a mountainous country has no doubt many dialects.

Dialects.

Into one of these, Pālpā, spoken in Western Nepal, the Serampore missionaries in the early part of the last century made a version of the New Testament, and as Nepal is independent territory to which Europeans have little access, that is our one source of information concerning it. The standard dialect is that of Kāṭhmāṇḍū, and in this there is a small printed literature, all modern. The dialect of Eastern Nepal has of late years been adopted by the missionaries at Darjiling as the standard for a grammar and for their translations of the Bible. Eastern Pahāṇī is written and printed in the Nāgarī character.

Central Pahārī includes the dialects spoken in Eastern Sapādalaksha, i.e., in the British Districts of Kumaun and Garhwal Central Pahāri. Survey. Census of 1921. Kumaunī 436,738 and in the State of Garhwal. It has two Garhwālī 670,824 well-known dialects,-Kumauni, spoken in Kumaun (including the hill station of Naini 3,8531 1,107,612 Tal), and Garhwäli, spoken in British and independent Garhwal and the country round the hill station of Mussoorie. These dialects vary from place to place, each pargana having a distinct form of speech, each with a local name of its own. Neither of these main dialects has any literary history. The Serampore missionaries published translations of the New Testament into each of them, and other versions of portions of the Scriptures have lately been made into Garhwali. During the past few years a few books have been written in Kumaunī, and one or two in Garhwālī. So far as I have seen, both dialects are written and printed in the Nagari character.

Western Pahārī is the name of the large number of connected dialects spoken in Western Sapādalaksha, i.e., in the hill country of which Simla, the summer head-quarters of the Government of India, is the political centre. These dialects have no standard form, and, beyond a few folk-epics, no literature. The area over which they are spoken extends from the Jaunsar-Bawar tract of the United Provinces, and thence, in the Province of the Panjab, over the State of Sirmaur, the Simla Hills, Kulu, and the States of Mandi and Chamba, up to, and including, the Bhadrawah Jagir of Kashmir. The language has numerous dialects, all differing considerably among themselves, but nevertheless possessing many common features. We may conveniently group them under the nine

TOTAL	853,468 1,633,915	cludes three well marked dialects, and is

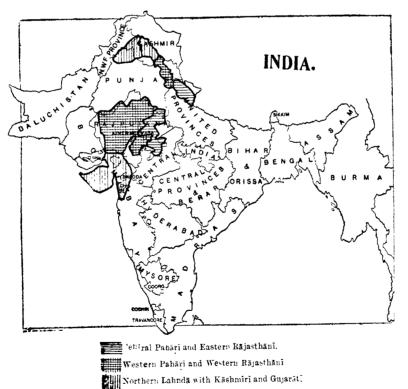

spoken in the State of Sirmaur and in the south of the State Jaunsārī of Jubbal. It is closely connected with Jaunsari, but north of the River Giri and in Jubbal it begins to approximate to Sirmaurī Kiūthali. Sirmauri lies west of Jaunsāri, and still further to the west we have Baghati, these three forming a con-Baghātī. tinuous band forming the southern limit of the Western Pahārī dialects. Baghātī is the dialect of the State of Baghat and the neighbouring tracts, and within its area lie the military stations of Kasauli and Dagshai. It is a transition dialect between Sirmauri and Kiūthali. Kiūthali Kiãthalī. is the language of the central portion of the Simla Hill States, and is spoken round Simla itself and in the State of Keonthal, from the latter of which it takes its name. It varies greatly from State to State, and from Pargana to Pargana, so that no less than seven forms of it have been recorded in the Survey. North of Simla lies Kulu, separated from it by the River Satlaj, and on each bank of that river there are a couple of dialects forming a bridge between the Satlaj dialects. Simla dialects and Kului. These form the Satlaj group given on the margin of p. 182. In Kulu there are three dialects. Kuluī. Kului proper and two others. West of Kulu, and also lying to the north of the Simla Hill States, are the States of Suket and, to its north, Mandi. Here we have the dialects of the Mandi group. There are four of these, of which the most important are Manděali and Sukēti. West of Mandi lies Maṇḍĕāļī and Sukētī. the Panjab District of Kangra, in which the language is a form of Pañjābi. We need not therefore be surprised to find that the dialects of the Mandi Group represent southern Kuļuī merging into Panjābī. North-west of Kulu and north of Kangra lies the State of Chamba. Here there are four dialects, of which the most important is Chameali, the principal language of Chamĕāļī. Gādî. the State. Another dialect is Gādī, spoken by the Gaddīs, a pastoral tribe inhabiting the Bharmaur Wizarat of the State, on the Kulu frontier. The speakers are descendants of immigrants from the Panjab plains, who took refuge here from Musalman oppression. They now speak a form of Chameali, but with the peculiarity that they sound every sh-sound like ch in the Scottish 'loch.' In the extreme north of the Chamba State lies the beautiful but isolated mountain tract of Here the dialect is called Pangwali, also a form of Pangwāļî. Chameali, but beginning to show signs of transition into Kāshmīrī. Finally, north-west of Chamba proper and of Pangi, lie the Bhadrawah Jagir and the Padar District, both belonging to Kashmir. Beyond them lies Kashmir proper, of which the language is Kāshmīrī. It is therefore to be expected that the dialects of Bhadrawah and Padar should be transition forms of speech between Chameali and Kāshmīrī, and such in fact is the case. The dialects of this tract form the Bhadrawah group, and are three in number, viz., Bhadrawāhī, with its Bhadrawāhī, Bbaļēsī, and Pādarī. sub-variety Bhaļēsī, and Pādarī. This concludes a rapid survey of the numerous Western Pahārī dialects, and we have been able to trace the gradual change from the Khas dialects of Central Pahāri

through the Simla Hills into the semi-Kāshmīrī of Bhadrawah and Padar

Western Pahārī is written in the Ṭakkarī alphabet, already referred to as the written character.

alphabet used for the Pogrī dialect of Pañjābī.¹ It has most of the disadvantages of Laṇḍā, being very imperfectly supplied with signs for the vowels. Medial short vowels are usually altogether omitted, and medial long vowels are represented by characters which are also used for initial vowels, whether long or short. In the case of Chamĕāļī, the character has been supplied with the missing signs, and books have been printed in it that are as legible and correct as anything in Nāgarī.

For the present excluding from consideration the case of Eastern Pahari, as a modern importation into Nepal, we can now say that the Himalayan languages and lower Himalaya from Kumaun on the east to the Afghan Rājasthānī. frontier on the west is occupied by four languages,—on the east by Central Pahārī, to the west of that by Western Pahārī, and finally in the extreme west by Kāshmīrī and the northern dialects of Lahnda. We have seen that all these forms of speech show signs of ancient connexion with the Dardic languages, and it is interesting to observe that they are also more closely related than has hitherto been suspected with the languages of Rajputana and Gujarat. Across the Gangetic Valley and, further west, across the Panjab, facing these sub-Himalayan languages, we also find a triad of Facing Central Pahārī, across Western Hindī, lies well defined forms of speech. Eastern Rājasthānī; facing Western Pahārī, across Panjābī, lie Mārwārī and the connected dialects of Western Rajasthani; and facing Kashmiri and Northern Lahnda, across Southern Lahnda and Sindhi, and to the south-west of Western Rajasthani, lies

Gujarātī. The relative positions are shown in the accompanying map. But this parallelism is not merely geogra-It extends also to the peculiarities of the respective languages. Each language agrees with that facing it, and differs from its neighbours in remarkable characteristics. Thus, Central Pahārī agrees vis-à-vis, Eastern with its Rājasthānī, in having the genitive postposition kō, and the verb substantive derived from the root achh-, while in the Western Pahārī of the Simla Hills the termination of

the genitive is $r\bar{o}$ as in the dialects of Western Rājasthānī, and one of the verbs substantive (\bar{a}, is) is probably of the same origin as the Western Rājasthānī hai. We next come, in the southern triad, to Gujarātī. Here the genitive termination is $n\bar{o}$,

and the verb substantive belongs to the achh-group. The corresponding languages of the north are Kāshmīrī and Northern Lahndā. In the latter the genitive termination is nō, but the verb substantive differs from that of Gujarātī, although the closely connected Kāshmīrī forms it from the same root, achh-. Moreover, Gujarātī also agrees with all the Lahndā dialects in one very remarkable point, the formation of the future by means of a sibilant, a peculiarity not found elsewhere in the Indo-Aryan languages. We thus find that right along the Lower Himalaya, from the Indus to Nepal, there are three groups of dialects, each agreeing respectively, in striking points, and in the same order, with Gujarātī, Western Rājasthānī, and Eastern Rājasthānī respectively.

¹ Lahndā luṭṭṣī. Gujarātī kuṭśē, he will strike.

CHAPTER XVI.—UNCLASSED LANGUAGES.

There remain a few Indian languages which do not fall under any of the heads previously described. These are the Gipsy dialects, Burushaskī, and Andamanese.

The word 'Gipsy' used in this connexion is employed in its purely conventional sense of 'Vagrant,' and should not be taken as in any way Gipsy Dialects. suggesting connexion with the Romani Chals of Europe and Western Asia. Many forms of speech employed by vagrant tribes have already been dealt with in the preceding pages, as it was possible to identify them as definite dialects of recognized languages. Such are the Korava and Kaikādī dialects of Tamil, the Kurumba dialect of Kanarese, and the Vadari dialect of Telugu. These are all Dravidian through and through. On the other hand, as entirely Indo-Aryan, we have had such dialects as the Labhānī, Kakērī, and Bahrūpiā forms of Rājasthānī, the Tārīmūkī or Ghisādī form of Gujarātī, and a number of Bhīl dialects such as Bāorī, Chāranī, Habūrā, Pāradhī, and Siyālgīrī. About these there has been no difficulty as regards classification. It is sufficient to note here that these dialects are either Dravidian, or belong to the mutually closely connected Indo-Aryan languages, Rajasthānī, Gujarātī, or Bhīlī.

The remainder fall into two groups, viz., dialects proper, and argots. The figures

Gipsy	dialects	١.		Survey.
Dialects	\mathbf{Proper}			9,748
Argots	•		2	91,923
	Тота	T.		101 671

for these, as given on the margin, must be taken with considerable reserve, for we know that there are several Gipsy tribes which have escaped the nets both of the Survey and of the Census, and also that, for those that have been recorded, considerable numbers have avoided enumera-

tion. Most of the tribes are more or less disreputable, and the speakers of the dialects are not, as a rule, anxious to proclaim their associations.

Subject to the above remarks, we may enumerate the true Gipsy dialects as on

True Gipsy	diale	cts.		Survey.
Pendhari				1,250
Bhāmtī				14
$B\bar{e}ld\bar{a}r\bar{\imath}$				5.140

the margin. It has been pointed out above that the Gipsy languages which we have been able to classify are either dialects of well-known Dravidian languages or are forms of Rājasthānī or the closely connected Gujarātī or Bhīlī. The unclassified Gipsy languages, on the other hand, are all mixtures of various forms of speech, but they possess one characteristic in common—that they nearly all seem to have a Dravidian basis, and that the speakers seem to have first

come under the influence of Indo-Aryan tongues in or near Rajputana and the Bhīl country. There each mixed language took its original shape or shapes, and as the tribes wandered thence over India it became extensively corrupted by the speech of the various localities in which the speakers respectively found themselves.² If this account is accepted, we can further look upon the classified Gipsy languages from the same point of view. Those which are now Dravidian dialects, are those which have preserved their original form with little or no contamination, while those that are Indo-Aryan are dialects of tribes which had their head-quarters for so long a period in the Rajputana

¹ The most important of these is that of the Chūhṛās, a sketch of whose argot has been given by Dr. Grahame Bailey in his "Notes on Punjabi Dialects."

² The one important exception is Pendhari which, as we shall see, has a history of its own.

country that they had altogether given up the Dravidian language of their original home, and had fully adopted that of their hosts.

The one important exception to the above given general statement as to the probable origin of Gipsy dialects is furnished by Peṇḍhārī.

This is the language of a tribe of no common race, and of no common religion, represented by the 'Pindarees' of Indian history. These were plundering bands of freebooters, who welcomed to their ranks outlaws and broken men of all parts of India—Afghāns, Marāṭhās, Jaṭṭs, and so forth, and who were finally broken up by the Marquis of Hastings in 1817.

At the present day they are represented by groups of people scattered over Central India, the Bombay Presidency, and elsewhere. They have generally adopted the languages of their respective surroundings, but in parts of Bombay they still have a home-language which is called by the name of the tribe. As may be expected from the people's origin, this is a jargon—a mixture of rough Dakhini Hindōstāni, Marāṭhī, and Rājasthānī. Further description is unnecessary.

The Bhāmṭās are a criminal tribe, found in the Central Provinces and Southern

India. They are not proper vagrants, but live in villages which they use as head-quarters for their thieving expeditions. Most of them speak the Vaḍarī form of Telugu,¹ but those of Bījāpur speak Kanarese, and a few of them have been reported from the Central Provinces as having a home-language called Bhāmṭī. It is a broken jargon, a mixture of Dakhinī Hindōstānī and the Jaipurī form of Rājasthānī.

The Bēldārs are a tribe of earth-workers, scattered over the greater part of India.

Most of them have adopted the language of their respective surroundings, but a language called Bēldārī has been reported from Jaisalmir in Rajputana, the Central Provinces, and the Bombay Presidency. It is a mixture of several languages, the principal being Eastern Rājasthānī and Marāṭhī, but the relative proportions of each constituent naturally vary according to locality.

Closely connected with Bêldārī is Ōḍkī, the language of the Ōḍs, or Waḍḍars, a wandering tribe of earth-workers. They are found all over India, but principally in Madras and the Panjab. The Ōḍs of Madras speak Telugu, which seems to have been the original language of the tribe. In the Panjab, Sind and Gujarat, they have a home-language of their own. It is a mixture of Marāṭhī and Gujarātī-Rājasthāni, the relative proportions varying according to locality. We may compare it with the Vaḍarī already mentioned in connexion with Bhāmṭī.

The Lāḍs are a Gipsy tribe who sell betel-leaf, areca-nuts, tobacco, bhang, etc. They are found all over Western India, especially in the Bombay Presidency. Most of them have no dialect of their own, but some of those found in Berar speak what is locally known as Lāḍī. This is mainly a corrupt form of Eastern Rājasthānī.

Machariā is the language of a tribe of fowlers from Sind, who have migrated to the Kapurthala State in the Panjab. It is not properly a Gipsy language, though usually described as such. It is merely a mixture of Sindhī and Pañjābī.

With Macharia, we conclude the consideration of those Gipsy languages which can

be called dialects. We now proceed to discuss the argots. Those reported for the Survey are noted on the margin. These are used by criminals and other disreputable people for purposes of secrecy, and are paralleled by the 'thieves' Latin,' and other cant forms of speech found in Europe. It is interesting to observe that, so far as they can be analysed, they have adopted much the same means of disguising speech as those adopted in the west. Such are the use of special words, often borrowed from foreign languages, just as a London thief calls his woman a 'Donah,' borrowed from the foreign 'Donna.' Or they transpose letters. A London thief calls a policeman a 'slop' (i.e., 'icelop,' transposed)

from 'police') and so an Indian thief calls his enemy the police Jamadar, a 'Majadar,' i.e., 'the sweet one.' Or single letters may be changed in a word. In German cant, 'hitze.' heat, becomes 'witze,' and so when a $S_{\overline{a}}^{\underline{\alpha}}$ wishes to say he is hungry, he uses the word ' $jh\bar{u}kh\bar{a}$ ' instead of ' $bh\bar{u}kh\bar{a}$.' The speakers of these cant argots are, of course, bilingual. They speak the language of their neighbours, and reserve the argot only for special occasions. But some of them, such, for instance, as the Sasis, are trilingual. In communicating with their neighbours they employ the ordinary language of the country. for criminal purposes they employ an argot, while for general purposes they have what may be called a semi-argot, possessing some of the characteristics of the true argot, but with a simpler vocabulary, which they commonly use among themselves. The true argot is often not generally known to all the members of the tribe, but only to those who are grown up and expert. As already mentioned, our knowledge of these argots is necessarily incomplete. It is to be expected that the gentlemen who make use of them would not be willing to admit their existence to a Government official, even when he is asking for the Linguistic Survey. When questioned they usually deny its existence altogether, so that what materials we do possess have been obtained only with considerable difficulty. A noteworthy example is that of the Chuhras, whose argot does not appear at all in the pages of the Survey. I therefore begin our consideration of the subject with a brief reference to this tribe based on the information given by Dr. Grahame Bailey.1

The Chūhṛās are a tribe found in the Panjab. In 1921 their number was not recorded. Their occupation is scavenging, which they vary by burgling, cattle poisoning, and other criminal practices. They eat carrion. Their argot is Pañjābī, but they conceal their meaning by using a pretty copious secret vocabulary which makes it quite unintelligible to the ordinary hearer. Many of these words are also found in other argots, such as Sāsī or Qaṣāī. In order to give an idea of the kind of speech they use, I give the following extract from Dr. Bailey's Notes:—

In order to get right to the heart of things let us accompany an expedition which has as its object the plundering of some rich man's house. Some chhurm (thief) who always keeps his eyes open has discovered a kuḍḍh (house), belonging to some Rāṇkā (Hindū) or thir balā (Musalmān). He seeks out another Kāļā (thief) from among his own people, the Rūngē (Chūhṛās), or he may

¹ Notes on Punjahi Dialects, pp. 13ff.

find an obliging $Bh\bar{a}t\bar{u}$ (Sasi) ready to help him. Having painted in glowing colours the richness of the house in bhīmtē (rupees) and bayēlē (do.) and harjīyē (pice) and thēlē (a kind of ornament), he says "chalō gul lāīyē" (let us break into the house). We shall follow these men. as on a dark moonless night they set out. Having reached the house they produce their $tomb\bar{u}$ (iron instrument for house-breaking, an oriental jemmy) and set to work. They take the precaution of placing by their side several chhikare or clods of earth with which to assail any unwelcome intruder. The hole is finally made and the thief, leaving outside his $k\bar{a}_{l}/k\bar{i}$ (stick) and paintri or chākhal (shoes), and telling his litārā (confidant) to keep a sharp look out. enters the house. If he finds no one inside he will venture to light a quasai (match). Suddenly a small clod of earth drops near the house-breaker; this is the neolā (piece of earth thrown as a warning of impending danger). He looks round in alarm and hears the whispered words "kajjā chāmdā ī" (a Jāt is looking). This interruption in his gaimī (thieving) he feels to be most inopportune. He feels still more ill at ease when he hears another hoarse whisper "thip jā (hide yourself), palvē hōjā "get to one side). He calls back "kainkar kar (throw a clod of earth), loth lai sū" (beat him or kill him) and emerges from the house. The neodi (theft) has not prospered. The two thieves flee by different ways to their homes, and next day discuss with great astonishment, bordering on incredulity, a report which has got abroad that a $kajj\bar{a}$ has been attacked by two Chūbṛā chhurm (thieves) who were engaged in lāllī (robbery), and has almost lug gayā (died).

The Sasis are a well-known criminal tribe, who, like the Chuhras, are mostly found in the Panjab. The Survey was more fortunate in regard to Sãsī. them, and, in addition to the information obtained by it, there are also the various papers on the tribe by Dr. Grahame Bailey, who has made it a special study. The Sasis are trilingual. They speak the general language of their surroundings, and have also two dialects, one, the ordinary Sasi which they use amongst themselves, and the other the criminal dialect. In the Panjab, the ordinary dialect is a corrupt mixture of Hindostani and Panjabi, together with a few forms borrowed from Western Pahārī or Rājasthānī. Elsewhere it more nearly approaches corrupt Hindostāni. The criminal argot differs from the ordinary dialect only in the use of secret words. These are very numerous, and make the language quite unintelligible to an outsider. Some of these words seem to be borrowed from other languages, Dravidian and Indo-Aryan. Many of them are found also in other argots. In other cases letters are prefixed or suffixed to common words, so as to disguise them, as, for instance, when they say kukkhī for the Pañjābī akkhī, an eye, or in dhōr for dō, two. Or initial letters may be changed as in $naukh n\bar{a}$ for $l\bar{o}kn\bar{a}$ or $d\bar{e}khn\bar{a}$, to see. These changes will be familiar to English readers from memories of their childish games, and it can readily be understood what confusion they make in a language, even when the grammar, as in the case of $S\overline{a}$ si, is but slightly changed.

The Kölhāṭīs are a tribe of rope-dancers and tumblers in the Bombay Presidency,

Berar, and the Hyderabad State. Many of the women are

prostitutes, the tribe claims to be related to the Sãsīs, and
this is borne out by their argot, which closely resembles that of that tribe.

They are said to be Musalmāns, but their religion sits very lightly on them. Their argot is a mixture of Dravidian and Indo-Aryan, the latter being represented by forms sometimes Hindōstānī, sometimes Rājasthānī, and sometimes Marāṭhī. In addition, as in Sāsī, they have many disguised

words, the meaning of which is unintelligible to an outsider. The number of speakers of this argot is unknown.

The Myānwālēs are a tribe also found in Belgaum. Little is known about them, but they seem ostensibly to be vagrant blacksmiths. They have an argot based on Hindōstānī and on Rājasthānī-Gujarātī, with a number of secret and disguised words. Here and there we also come across Dravidian words. The number of speakers is unknown.

The Kañjars are a vagrant tribe. Some of them have taken to a settled life, but most of them live in the forests, where they live on what they can catch or gather, and manufacture forest products which they sell to their more civilized neighbours. Their occupations are thus sufficiently various. Amongst other things they make mats, baskets, fans, leaf platters, and the like. They have almost the monopoly of the collection of the fragrant *khaskhas* grass, and, as stone-cutters, they make the grinding stones found in every Indian house. Their principal home is in the United Provinces. They speak the language of their neighbours, but have also their argot, called Kañjarī. It is a mixed form of speech, mainly based on Eastern Rājasthānī, but partly on some Dravidian language. It has also, as elsewhere, a number of secret or disguised words.

The Nats are a tribe of acrobats, dancers, prostitutes, and thieves, who are found in considerable numbers all over northern India and the north of the Deccan. In Bihar and the United Provinces they are recognized as possessing, like other similar vagrant tribes, a secret argot, and probably this is also the case elsewhere. It is a mixture of Hindōstānī and Rājasthānī, and, as usual, has a large number of secret and disguised words. The basis is probably Rājasthānī, as forms peculiar to that language appear in parts of India where that language is unknown to the general population.

The Doms are a tribe of great antiquity, and probably of Dravidian origin. They are numerous all over India north of the Deccan, and in Dōm. greatest number in Bengal, Bihar, and the United Provinces. They are of special interest because the word 'Rom,' the name used for a European Gipsy, is almost certainly the same word carried to the west. They have varied occupations. They supply fire at cremations and act as executioners. Others are scavengers, and others have taken to basket and cane working. In the Himalayan districts they have gained a fairly respectable position as husbandmen and artizans, while the wandering Magahiyā Doms of Bihar are professional thieves. On the other hand, in north-western India, Doms occupy a good position as professional minstrels, and it was professional minstrels of this part of India who are said by Persian historians to have migrated into Persia, and thence, as Gipsies, into Syria and Europe. It is the disreputable Magahiyā Doms of Bihar who have been identified as possessing a secret argot. As stated above, they are notorious thieves and bad characters, who will not cultivate or do honest labour if they can help it. The women are no better than the men. As a cover they do occasional basketwork, but their true occupation is that of a spy and disposer of stolen goods. Some of their methods of concealing stolen goods have the merit of ingenuity, but hardly of decency.1 The argot of these people is based on the local dialect of Bihārī (usually

As a magistrate who has had many of these people before him, I can speak with personal knowledge.

BURUSHASKĪ. 191

Bhojpurī) with a mixture of Rājasthānī and Hindostānī. The presence of Hindostānī is easy to explain, but not that of Rājasthānī, unless the tribe once lived in Rajputana. In addition to this, there is the usual copious supply of secret and of disguised words. The latter, in their principles of formation, differ in no way from those of other argots, while many of the secret words are common to all vagrant tribes.

The Malārs are a vagrant tribe of moulders in brass found in Chota Nagpur.

Unlike Poms they are not, as a tribe, professional criminals.

The ordinary language of that country is the Nagpuriā dialect of Bihārī, and the Malārs have an argot which is simply a slang based upon it. These people do not seem to employ any strange or secret words, but content themselves with disguising Nagpuriā words by the ordinary methods of prefixing and suffixing letters which we have observed elsewhere.

The Qaṣāis are professional butchers, and are found all over India, except in the Madras Presidency and the extreme south. They are most numerous in the United Provinces and in the Panjab. They have a trade language of their own, which is an argot of the usual kind. It is based on Hindōstānī, with a mixture of local words. The disguising consists principally in the use of strange or secret words. The disguising of common words by additions before or at the end is much more rare than in the argots we have hitherto considered. It is worth mentioning that among the strange expressions used by them are the Arabic words for the numerals.

Sikalgārī is the argot used by the Saiqalgārs or armourers. As becomes their profession most of them are found in Rajputana, but the only locality from which a Sikalgārī argot has been reported is the Bombay District of Belgaum. There the secret argot is based on Gujarātī or Bhīlī. The ordinary means are employed. There are a certain number of secret words, and ordinary words are disguised by prefixes or suffixes, or other methods of deformation.

The Gulguliās are a vagrant non-Aryan tribe found in the Hazaribagh District of Chota Nagpur. They are few in number, and live by hunting, teaching monkeys to dance, selling drugs, begging, and petty thieving. They have an argot of the usual description containing secret and disguised words. In intercourse with outsiders they employ the ordinary language of the locality.

Leaving the Gipsy languages, we come to Burushaski or Khajuna, which is spoken by the brave tribes who inhabit Hunza Nagar and the neighbouring country on our extreme North-Western Frontier. The number of speakers is unknown. Hitherto it has remained a riddle among languages. No philologist has as yet satisfactorily succeeded in placing it under any recognized family of speeches. One gentleman has, it is true, claimed to be able to class it as a 'Siberio-Nubian' tongue, but he offered no proof of his statement, although the name has the doubtful advantage of being unintelligible to everyone except its inventor. I myself have compared it with nearly every other known Asiatic language, and have failed to find any certain congener, though here and there a

¹ Myde Clarke, in Indian Antiquary, I. 258 (1872).

The resemblance in vocabulary has started me on more than one wild-goose chase. rearest thing to certainty to which I have ever attained has been an impression that may possibly be a distant connexion with the Munda languages; but I have never succeeded in persuading myself that this is actually the case. Half a century after the publication of the Siberio-Nubian theory, an American scholar, Mr. P. L. Barbour, has offered a theory which leads in the same direction. He himself does not put it forward as proved, but rather as indicating lines for future investigation, and it is very probable that further inquiries in this direction may ultimately solve the problem. He looks upon Burushaski as a remnant of a language spoken in northern India before the Aryan invasion. We have seen that the Munda languages are now confined to the hills south of the Gangetic plain, but that traces of languages of the same family are found in the Lower Himalaya so far west as Kanawar in the Panjab.² Mr. Barbour's theory assumes an ancient form of this Munda speech (possibly contaminated by Dravidian) more widely spread over northern India, and in existence at the time of the Aryan invasion. Some three thousand years ago, one set of its speakers were driven north by the Aryans into the fastnesses of the Hindūkush and have had an isolated existence there ever since, during which time their language has developed on its own lines.3 Others, before the advancing tide of Aryan immigration, took refuge in the hills north and south of the Ganges, and became the Mundas and their cognate brethren of the lower Himalaya. I have here given my account of Mr. Barbour's theory, not in his own words, but as it has been filtered through my brain; and hence, possibly, I may have misrepresented it, or may have laid stress on points which to him may have been less Moreover, what I have given is merely a condensed summary of what he important. has expressed with much detail and with a consideration of Dravidian elements of the population which, for the sake of simplicity, I have omitted.

Burushaskī has many names. The neighbouring races call it Khajuna; the Nagar people call it Yashkun, and the Yārkandīs Kunjūtī. The dialect spoken in Yasin and the neighbourhood is known as Warshikwār. The language has a fully conjugated verb with two numbers and three persons, and its most characteristic feature is the extremely frequent use made of pronominal prefixes, so as sometimes greatly to alter the appearance of a word. Thus 'my wife' is aus but 'thy wife' is gus; 'to make him' is etas; 'to make you' is mamaritas if you are a gentleman, but matas if you are a lady.

Finally there are the languages of the Andaman islanders. These do not fall within the purview of the Survey, and I have nothing to add to our knowledge concerning them. Philologists have not yet succeeded in connecting them with any recognized family of speech. They are all agglutinative, making free use of prefix, infix, and suffix, and are adapted only to the expression of the more simple ideas. Abstract ideas are almost beyond their power of expression, and meaning is eked out by the free use of gesture.

¹ In the Journal of the American Oriental Society, Vol. XLI (1921), pp. 60ff.

² Ante, pp. 35 and 55.

³ The fact that Burushaski words are found in the Dardic languages, shows that it must have once been spoken over a much wider area than that suggested by its present habitat. If, as I believe, the Dardic languages represent the speech of an independent Aryan invasion from the north, over the Hindūkush, we can assume that the speakers of the ancient proto-Muṇḍā language were first driven north into what is now the Dard country by the Aryans from the west, and that subsequently Aryan invaders from the north entered that country, and either settled among them, or drove them into the still more inaccessible fastnesses where they are now found.

CHAPTER XVII.—CONCLUDING REMARKS.

With these languages of the Andamans we complete our survey of the tongues spoken The Modern Indian Verna- in India-a land of contrasts, nowhere more evident than culars. when we approach the consideration of its vernaculars. There are languages whose phonetic rules prohibit the existence of more than a few hundred words, and that cannot express what are to us the commonest and most simple of ideas; and there are others with opulent vocabularies, rivalling English in their copiousness and in their accuracy of idea-connotation. There are languages every word of which must be a monosyllable, and there are others with words in which syllable is piled on syllable, till the whole is almost a sentence in itself. There are languages which know neither noun nor verb, and whose only grammatical feature is syntax; and there are others with grammatical systems as completely worked out as those of Greek or Latin. There are languages with a long historical past reaching over thirty centuries; and there are others with no tradition whatever of the past. There are the rude languages of the naked savages of Eastern Assam, which have never yet been reduced to writing; and there are languages with great literatures adorned by illustrious poets and containing some of the most elevated deistic sentiments that have found utterance in the East. There are languages, capable in themselves of expressing every idea, which are nevertheless burdened with an artificial vocabulary borrowed from a form of speech that has been dead for two thousand years; and there are others, equally capable, that disdain such fantastic crutches, and every sentence of which breathes the reek of the smoke from the homesteads of the sturdy peasantry that utters it. There are parts of India that recall the confusion in the Land of Shinar where the tower of old was built, in which almost each petty group of tribal villages has its own separate language; and there are great plains, thousands and tens of thousands of miles in area, over which one language is spoken from end to end.

And over all there broods the glamour of eastern mystery. Through all we hear the inarticulate murmur of past ages, of ages when the Aryans wandered with their flocks across the rivers of Mesopotamia; when the Indo-Chinese had not yet issued from their home on the Yang-tse-kiang; when some prehistoric Indian Teucer dured to lead his companions across the Bengal Bay to Indonesia; and perhaps when there existed the Lemurian continent where now sweep the restless waves of the Indian Ocean.

Light comes from the East, but many years must yet be passed in unremitting quest of knowledge before we can inevitably distinguish it from the false dawn that is but a promise and no reality. Hitherto scholars have busied themselves with the tongues and thoughts of ancient India, and have too often presented them as illustrating the India of modern times. But the true modern India will never be known to us till the light in the West has been reflected back on the hopes, the fears, the beliefs, of the three hundred and twenty millions who inhabit it at the present day. For this, an accurate knowledge of the vernaculars is necessary, a knowledge not only of the colloquial languages, but also, when they exist, of the literatures too commonly decried as worthless, but which one who has studied them and loved them can confidently affirm to be no mean possession of no mean land.

No one is more conscious of the deficiencies of this Survey than he who has been responsible for its conduct. To begin with, although called Defects of the Survey. the Linguistic Survey of India, large tracts of India are Incompleteness. altogether unrepresented in its pages, and the languages of the States of Hyderabad and Mysore and of the great Provinces of Madras and of Burma have received only the most cursory notice. This was the result of circumstances for which I was not responsible, and I can do no more than express my regret for the fact. So far as Burma is concerned, I rejoice that an independent Linguistic Survey of that Province is now being undertaken under the capable superintendence of Mr. L. F. Taylor of the Indian Educational Service. In the present Survey, the numerous Indo-Chinese languages spoken in the Province of Assam received full attention, but any account of them was necessarily incomplete, so long as the cognate forms of speech employed in the adjacent Burma remained unexamined. Independently therefore of the practical aid which the Linguistic Survey of Burma will contribute to the Government of that Province, it will also enable those interested in languages generally to study the Indo-Chinese languages of India as a whole. When that Survey is completed, it will be possible to compare the Bârâ of western Assam with the Lolo of eastern Burma, and the Khāsī of Shillong with the Talaing of Amherst beyond the Gulf of Martaban. May I express the hope that at some future time a similar Survey will be held of the languages of Madras and of the States of the Deccan which have not been dealt with in these pages.

The reader who may have to consult the volumes of this Survey will no doubt regret, as I do, the absence from its pages of any reference Phonetic Desiderata. to the important subject of phonetics. When the Survey was begun that science was in its childhood. It was hardly known in India, and, even in Europe, it had not yet succeeded in producing an alphabetic system capable of representing all possible sounds which had been universally adopted by general consent. At the present day, the state of affairs is very different, and the alphabet of the International Phonetic Association is now familiar to every serious student of language. An ideal inquiry into the various modern languages spoken in India would require that every vernacular word quoted should be written in that script, and with its help we should then be able to tell exactly how each word in each dialect is pronounced. But its correct employment is within the power only of trained phoneticians, and, even if at the time the specimens of this Survey were being prepared it had been in use in India, its employment would have been dangerous. Except for one or two languages, such, for instance, as Bengali, no Indian form of speech of the present day has been the object of the necessary detailed and minute study, and it is often impossible to say what are the exact sounds which are to be represented in written form. In this Survey, most of the materials have either been received from government officials, who,—however familiar with the practical use of the dialects on which they reported they may have been,-did not pretend to be skilled phoneticians, or else have been collected from books by many authors which gave no real particulars regarding the sounds recorded in them. In such cases all that we can hope for is an approximate representation, which may or may not be accurate, of the various sounds, and here the use of phonetic script

¹ See Professor S. K. Chatterji's article on Bengali Phonetics in the 'Bulletin of the School of Oriental Studies, 'Vol. II, pp. 1ft.

would give the reader a false sense of security that might easily lead him astray. As it is obvious that one system must be used throughout, the specimens in this Survey have all been recorded in an alphabet based on the well-known official system employed in India for the transliteration of Indian words. This is the system with which all government officials are familiar, and which they can be trusted to employ correctly. The record of sounds so made is, as I have said, confessedly a mere approximation, but, as it is consistent with itself, it may be used with some confidence as a foundation for further inquiries into phonetic niceties.

After all that can be said in its favour, the Survey is but a representation of the written word, nor could this be much improved for the lay Gramophone Records. reader by the most accurate and most scientific of phonetic transcriptions. Unless the subject is in metre, no system of spelling can convey to the reader those nuances of expression which give its life to each word and adjust it to its proper relationship to its fellows in a sentence. The same man may pronounce the same word in a slightly different manner each of ten times in half as many minutes, and each time the slight difference will give it a different shade of meaning. Nevertheless, in spelling, each of these different enunciations is represented by the same letters. Moreover, the written word gives no record of the emphasis laid on particular syllables or on the general cadence, or swing, of each sentence, although the custom in regard to these differs in every language. I have pointed out above how the order of a speaker's thoughts differs from nation to nation, and how this influences language in the order of the words employed by him in a sentence. But that is not the only effect of the order of the speaker's thought. It also exercises an important influence on the cadence of each phrase, so that the natural cadence of, say, an English phrase differs widely from that of any Indian language. Now, for mutual intelligibility, the correct representation of a phrase with its proper cadence is all-important. A familiar example of this is the case of an Englishman speaking Bengali. On his arrival in India he may possibly speak the language with perfect verbal correctness and with fair pronunciation; yet, if he addresses the simplest sentence to a villager, he will find it a common experience to receive as a reply, 'Sāhib, I do not understand English.' The man has no idea of being importinent, nor is he wanting in intelligence. If he had grasped the fact that he was being addressed in Bengali, he would have known the meaning of every word attered to him. But he is more or less flustered by the white face of the stranger, and all that his slow mind apprehends is that he has been spoken to in an unfamiliar cadence,—and not in that of his own language. Without attempting to identify the separate words of his questioner he couples this strange sentence-melody with the white face, and jumps to the conclusion that he is being addressed in English.

This particular defect of the written word as a representation of speech is remedied by the use of a gramophone or phonograph. With one of these, even if its pronunciation of a particular word or of a particular letter is not clear, the emphasis and melody of each sentence is always reproduced with perfect competence. For this reason,—as a supplement to the Survey,—arrangements have been made with several of the Provincial Governments and with certain of the States of India for the preparation of gramophone records of

passages in the principal languages spoken within their respective jurisdictions. At the time of writing (April, 1924) these records have been received from the following Governments:—Bihar and Orissa, Bombay, Burma, the Central Provinces, Delhi, Madras, and the United Provinces of Agra and Oudh, and others are under preparation or have been promised. Altogether 218 records, illustrating 97 languages and dialects have been prepared, and have been placed within the reach of students by the presentation of complete sets to the India Office Library, the British Museum, the Royal Asiatic Society, the School of Oriental Studies, the Bodleian Library at Oxford, the University Libraries of Cambridge, Dublin, and Edinburgh, and (in Paris) the Institut de France.

These records have more than once been publicly exhibited in London, and have excited considerable attention in circles devoted to the serious study of Indian languages. But their usefulness has not stopped there. Properly prepared gramophone records render invaluable aid in teaching any language. A gramophone will repeat with perfect accuracy any passage, long or short, over and over again, without raising any objection, while a human teacher is human and possesses a throat that soon, like his patience, becomes exhausted. So useful have these records that have been prepared for the Linguistic Survey proved themselves, that certain of them now form parts of the language courses laid down in this country for the instruction of Selected Candidates for the Indian Civil Service.

With one group of exceptions, all Indian words have, from beginning to end of spelling of proper names; this Survey, been spelt on the system above described. All the exceptions are proper names. When the name of a person is mentioned, and is known only as written in an Indian character, I have transliterated it like any other vernacular word. But, if he is alive at the present day and writes his name himself in English style, I follow the spelling used by him, on the principle that every person has the right to decide how his own name should be spelt. Thus, if a gentleman calls himself 'Bonnerjee', I write his name so, although he himself might, when using Indian characters, write it 'Vandyōpādhyāya,' or, if he signs himself 'Jeejeebhoy,' I do not call him 'Jījībhāī.'

The question of proper names of places is more difficult. There occur in the Survey hundreds of names of towns or villages, the correct spelling of which either is uncertain, or has been conventionalized. Regarding the latter, there need be no hesitation. Even in the most meticulously scientific work, no one would dream of writing 'Kalikātā' for 'Calcutta' or 'Kānhpur' for 'Cawnpur'. But the question of how to deal with the names of those less known places, the spelling of which is uncertain, is not so easy to answer. The difficulty lies chiefly in regard to diacritical marks. In most parts of India it is not customary to aim at the accuracy achieved by their use. People, for instance, write 'Garhwal,' not 'Garhwāl,' and 'Shahabad,' not 'Shāhābād.' In other parts, such as Bombay, diacritical marks are more frequently employed in official publications, while, again, elsewhere, as in the Province of Madras, other and independent principles prevail. The correct spelling of most Indian place-names is, it is true, given in the Imperial Gazetteer, but this was not published till 1908, when a large

A complete list of these records will be found in Appendix II.

.

part of this Survey had already been published. It was manifestly unadvisable to write some place-names with full discritical marks, and others without them, and therefore, in dealing with place-names, I have, save in exceptional cases, followed the present custom of the greater part of Northern India, and have altogether avoided using them.

It is unnecessary to state that the whole value of the Survey depends upon its accuracy. Do the specimens, as recorded, truly represent Accuracy of Results. the forms of speech of which they purport to be examples? To this I can answer that, taken as a whole, I believe they do. More than ordinary precautions were taken to attain this object. No pains have been spared in endeavours to clear up doubtful points. My correspondence in this respect has been very large, and has sometimes had unexpected results. That there are errors here and there, and that some specimens are less valuable than others, is freely admitted; a uniformity of excellence would be an ideal impossible of attainment; but, if we consider the sources from which the translations came, it will be evident that in each case the chances of fair correctness having been achieved were considerable. The great majority of specimens were prepared either by Indians whose native language it was that was being illustrated, or else by missionaries who lived in daily and hourly contact with the illiterate people that spoke it. Others, again, were prepared by members of my own service, including many personal friends in the ripeness of whose knowledge I had the fullest confidence, and who had made special studies of the speeches of wild tribes to whom reading and writing were unknown. There were, of course, exceptions. Especially, in the case of some Indian contributors there was exhibited the consistent Indian preference for uniformity and for what was deemed correctness of speech. Some felt pain in putting into a written character, upon which they looked with reverence, the uncouth language of an unlettered peasant, and took pains to prune its luxuriance, to eradicate weeds of vulgarity, and to present to my view a garden too elegant in its symmetry. A few even refused to write down at all the barbarous words they heard, and offered to me as a specimen of the speech of an ignorant rustic a version of the Parable of the Prodigal Son in faultless Persianized Urdū or Sanskritized Bengali. A few of such even passed through the sifting to which all specimens were subjected by the local authorities before they reached me, but were readily recognized, and correspondence soon put matters right. My principal source of safety was, however, the great number of specimens received. As previously stated, there were several thousands of these, and for most languages there was a large choice available. No one could read and study all these,—and every single one of them received my careful personal scrutiny,—without gaining considerable experience in weighing values, and a flair for what was genuine and what was not. This, I confess, was a subjective test; but I used it, I hope, with discretion in selecting what specimens should be and what should not be printed. The great thing was that in most cases I was able to select, and was not compelled to accept unquestioned whatever I received from my informants. For languages with which I was myself familiar, for dialects acquired in the long cold-weather evenings chatting over camp-fires with the village greybeards or listening to village bards, I was naturally in a peculiarly favourable position; and the experience so gained was invaluable to me in estimating the worth of contributions couched in

forms of speech known to me only from books or not known to me at all. I therefore feel some confidence in offering the pages of this Survey as forming, on the whole, a truthful picture of the languages spoken over a large part of India. That I shall welcome criticisms and corrections goes without saying. To quote the words of Sir Thomas Browne, 1—

Weigh not thyself in the scales of thy own opinion, but let the Judgment of the Judicious be the Standard of thy Merit.... 'Twere but a civil piece of complacency to suffer them to sleep who would not wake, to let them rest in their securities, nor by dissent or opposition to stagger their contentments.

Such as they are, I lay these volumes as an offering before the India that was long my home, and that has itself had a home in my heart The Sum of the matter. for more than half a century. It was to me a memorable day when in 1868 my honoured teacher, Professor Robert Atkinson, introduced me to the Sanskrit alphabet in what soon became to me his familiar rooms in Trinity College, Dublin. Five years later, as, full of hope, I was bidding him farewell before starting for India, he laid this task upon me, and with the enthusiasm of youth I gladly undertook it. Throughout my active life among the people whom soon I learned to love, his parting injunction was ever present to my mind, and urged me on to devote such time as I could spare from official duties to preparation for its accomplishment. Twenty years later came the opportunity, and the privilege of conducting this Survey became mine. For me personally these years of preparation were by no means without profit. I have been granted a vision of a magnificent literature enshrining the thoughts of great men, from generation to generation, through three thousand years. I have been able to stroll through enchanted gardens of poesy, beginning with the happy, care-free, hymns of the Vedas, continuing through great epics, through the magic of the Indian drama and the consummate word-witchery of Kalidasa, through the lyric poetry of the Indian reformation, through the heart-melody of Tulasī Dās, down to the jewelled distichs of Bihari Lal. Truth have I gathered from many a tree of knowledge,from the ripe Pandit, strong in his monism, acute in thought, crystal clear in his exposition, and from the simple peasant chatting in his rude patois under the viilage tree, steeped in the deepest superstition, yet quick with a living faith in the fatherhood of God that would put to shame many a professing Christian. Hidden under religiosity have I found religion, hidden under legend history, wisdom have I found in the proverbs of the unlettered herd. Here and here did India help me; how can I help India? This is a question that we Westerners who have gone to India in the service of His Majesty have each in his own way done our best to answer. Among us have been great administrators, great soldiers, great scholars, great teachers, masters of the art of healing. There have been diversities of gifts, but the same spirit,—a spirit of devotion to duty, of love for and sympathy with the millions amid whom our lot was cast. My own share in the endeavour to answer it has been a very small one, but if this Survey should help to bring India nearer to the West, I shall feel that my efforts have not been utterly in vain.

To record my thanks to each of those who have helped me in this work would require a volume in itself. To the many members of my own service, to the generous missionaries, and to others who

have spared no time and no trouble in providing me with specimens or in solving difficulties, I owe a heavy debt of gratitude. In each case their names have been recorded at the heads of the specimens contributed by them. If I here refer to them as a whole, and not name by name, they will understand that this has been done with no thought of making the debt of light account. I must, however, make an exception in favour of or ename—that of the Reverend G. Macalister. At the instance of His Highness the Maharaja of Jaipur, this gentleman himself carried out a survey of the many dialects spoken in that State. The book¹ in which the results of his inquiry were recorded is a veritable storehouse of folklore, and must always be indispensable to anyone who desires to become familiar with the language of Rajputana.

Of those brought into more immediate contact with myself, I must first of all record my obligations to Rai Bahadur Gouri Kanta Roy, who was my Head Assistant while I was in India and for some years afterwards. He was responsible for the collection, arrangement, and copying of the thousands of specimens that were received during the earlier stages of the Survey. Through his most efficient superintendence of an office containing clerks of various nationalities and capabilities, the preliminary stages of the Survey moved steadily and uniformly to completion. He finished a long and honorable service under the Government of India as Superintendent of the office of the Punjab Disorders Committee, in the year 1921.

To my friend and collaborator Protessor Sten Konow² it is difficult for me to render sufficient acknowledgment. For nearly three years (1900 to 1902) we worked together, side by side, in the same room, and many a page of the volumes written during that period bears unacknowledged traces of his inspiring help. After his return to his home in Kristiania he continued still to place at my disposal all the powers of his clear intellect and of his erudition. As explained in the various prefaces, a large part of the Survey has come directly from his pen, and I should deeply regret if the credit for these sections was not fully attributed to him.³

Since Professor Konow's return to Norway in 1903, my assistant has been Mr. E. H. Hall, to whose constant assiduity I cannot avoid recording a word of recognition. Endowed with a remarkable facility for acquiring a familiarity with every oriental written character employed between Persia and Siam, he has been a most efficient proof-reader, and few misprints have escaped his notice. The originals of nearly all the maps in the different volumes of the Survey are also from his pen. To him, and to the careful printing of the Government of India Press, the Survey owes much freedom from clerical errors.

Last, but by no means least, comes the recognition of my obligations to my friends and fellow-workers at the head-quarters of the British and Foreign Bible Society, and particularly to Dr. Kilgour, the Editorial Secretary, and Mr. Darlow, the Literary Superintendent. Nothing can exceed the sympathy and the practical help which they constantly accorded to me in the course of my inquiries into the history of the

¹ Specimens of the Dia'ects spoken in the State of Jeypore, by the Rev. G. Macalister, W.A. Allahabad Mission Press, 1898.

² Now Professor in Oslo (Kristiania) University.

³ His contributions were:—Vol. III, Parts i, ii (a portion), and iii (Tibeto-Burman languages), Vol. IV (Dravidian and Munda languages), Vol. VII (Marathi), most of Vol. IX, Part iii (Bhil languages), and Vol. XI (Gipsy languages.)

literatures of the Indian languages. Of these literatures Biblical translations form an important part, and, in the case of many less known forms of speech, formed the only printed materials available. These were most liberally placed at my disposal, and were even procured for me when not obtainable in Europe. That monument of learning and completeness, the Historical Catalogue of Printed Editions of the Holy Scriptures in the Library of the Society, by Mr. Darlow and Mr. Moule, was a never-failing source of accurate information, much of which has been embodied in the bibliographical sections of the Survey, and what better tribute to it can I pay than to end these remarks with the colophon, taken from de Dieu's edition of Revelation, which closed that magnificent work:—

IAM VALE, LECTOR HVMANISSIME, ET LABORIBVS NOSTRIS FRVERE, EX QVIBVS SI QVID FRVCTVS CAPIS, TOTVM ILLVD OPT. MAXIMOQVE DEO ACCEPTVM REFERATVR, CVIVS VNIVS GLORIAM HIC SPECTAMVS, CVIQVE LAVS ET HONOS DEBETVR IN SEMPITERNVM.

VOL. I, PART 1.

VOLUME III—PART II. SIMI OR SEMĀ.

Page 222-

As stated in the Addenda Minora, I have been informed by Mr. J. H. Hutton, C.I.E., the author of A Rudimentary Grammar of the Sema Noga Language, and of The Sema Nagas (London, 1921), that the language described in the Survey represents the Lazmi dialect, which is very different from the language spoken by the greater part of the tribe. To the kindness of that gentleman I owe the following list of words in the Semā language which is in general use.

Mr. Hutton explains that the pronunciation of the vowels varies considerably, not only between villages, but between individuals. The normal value of a vowel is also very illusive, and varies between the long and short quantities. Only where the vowel is very definitely long or short, have the marks $\bar{}$ for long and $\underline{}$ for short been used. The letter \hat{a} indicates the sound of the a in 'pant', and, as usual, the mark' indicates the stress accent.

CHĀNG OR MOJUNG.

Page 333, Chang or Mojung — The List of Words in this language (see pp. 344ff.) was taken under great difficulties as the tribe was at the time hardly known. Mr. J. H. Hutton, C.I.E, has since then very kindly sent me a corrected list, which I here reproduce. Regarding Mr. Hutton's spelling, it must be explained that in Chang the length of the vowel in any particular word commonly varies between long and short, according to the speaker of the flow of the sentence. It is hence rarely significant The signs and are therefore used only when a vowel is very definitely long or short. Stress is indicated by the acute accent. The letter a indicates the sound of the a in ' pant,' and \tilde{a} the u in 'flutter.' The letter δ , which occurs in a few words, represents an o slightly broader than the o in 'got' perhaps as in 'gone', and shorter than the oa in 'broad.' In this way the a in the word 'Chang' itself, though marked long on p. 333, is not as long as that of the \bar{a} in 'father.' Mr. Hutton informs me that, as he hears it, the word 'Mojung' would be better spelt 'Mozung.' He adds, in correction of my statement that there is only one small village on the west face of the Patkoi range:-- There are only two Chang villages west of the Dikhu River, and in administered British territory, but the tribe is almost entirely located west of the Patkoi. The principal village is called Tuensang by Changs, and Mozungjāmi by Aos.'

STANDARD LIST OF WORDS AND SENTENCES IN THE CHANG NAGA LANGUAGE.

VOLUME V—PART I.

Page 11.—During the twenty years that have elapsed since this volume was published, much progress has been made in the study of the Bengali language and its early literature. For this we are chiefly indebted to the labours of the Bangiya Sāhitya Parishad, a society founded in Calcutta, which has conducted enquiries into both these branches of study on a thoroughly scientific basis. For much of what follows, I am indebted to one of its most learned members, Professor Sunīti Kumār Chatterji, D.Lit. (Lond.).

Regarding the origin of the name 'Bengal', which is discussed on this page, it is now established that, in medieval Bengali literature, the word 'Bangāla' (বঙ্গাল) was employed to denote what is now Eastern Bengal. The Province of Bengal consisted originally of four tracts:—

- 1. Varendra or Gauda, corresponding to what is now North Bengal.
- 2. Rāḍha, , , , West Bengal.
- 3. Banga. ,. ,. East Bengal.
- 4. Samarata ,, ., ., The Delta.

In medieval times, in Bengali literature, the word 'Bangāla' began to be used as an equivalent for 'Banga'.

As early as the closing centuries of the first millennium A. D., the meaning of 'Gauda' became extended so as to include West Bengal, that is to say, it was used to connote Varendra and Rādha together, and 'Samataṭa' and 'Banga' both came to be used as synonyms for South-East and East Bengal, respectively. During the same period, in Western India, 'Banga' became loosely applied to all Bengal, and this application gradually became accepted to some extent in Bengal itself, and helped to the adoption in modern times of the western term 'Bangāla' as the national name. On the other hand, West Bengal, with Nadia for its centre, gradually became known as 'Gauda', and thus, in early, — pre-Moslem, — inscriptions, Gauda and Banga came to be used as terms for West and East Bengal, respectively.

At the present day, Bengalis call the whole country 'Bāngālā' or 'Banglā' or 'Bāngālā-dēś', in each case, be it observed, the name of the country ending in a long \bar{a} . This term includes all Bengal, North, South, East, and West. But when they say 'Bāngāl-dēś', without the final \bar{a} of Bāngālā, they mean East Bengal,—not any specific tract, but the whole area in which the language is characterized by the peculiarities noted in this Survey as belonging to Eastern Bengali. A Bengali-speaker, no matter where he comes from, is called a 'Bāngālā', but a man from East Bengal is called a 'Bāngālā', 'Bāngālā', with the wider connotation, are no doubt borrowed from the Hindostānī (or Western Indian) 'Bangālā' and 'Bangālā'. while the other forms, without the final \bar{a} or $\bar{\imath}$, are older, being derived normally from the medieval 'Bangāla', and retaining the older connotation of that word. At the present

¹ All these words may indifferently be spelt with ng or with n. Thus, Bāngālā বাঙ্গলা or Bānālā বাঙ্গলা, Bāni, বাঙ্গলা ক Bānālā বাঙ্গলা or Bānālā বাঙ্গলা or Bānālā বাঙ্গলা for East Bengal.

day 'Bāṅgāl' has become a term of contempt. A West Bengāli speaker habitually employs it in a disparaging sense, although he would call himself a 'Bāṅgālī' with the final $\bar{\imath}$; and sometimes an East Bengali person will resent the use of the word 'Bāṅgāl', if accompanied by a tone of voice or gesture of contempt, although he will not object to his patois and his part of the province being called, respectively, 'Bāṅgāl-bhāshā' and 'Bāṅgāl-dēś'. This contemptuous use of the word 'Bāṅgāl' is old. It is found in Western Bengal writings of the 12th century¹, and its use to denote East Bengal carries on the tradition of an earlier state of affairs, in which the employment of the word Baṅgāla in this sense is attested by epigraphic and literary remains.

All this would seem to show that the mysterious 'City of Bengala' of the Portuguese writers was probably simply the city of Dacca.

Page 14, line 11 of Text from below. To the remarks on the Sanskritization, as practised twenty years ago, I gladly add the following account by Professor Sunīti Kumār Chatterji of the present state of affairs:—

During the last two or three decades, there has been quite a revolution in literary Bengali. Bankim's later works already employ a very vigorous style which is more true to the native genius of the language than before; and (except of course in the writings of a clan of Sanskritists) there has been a constant attempt to bring the literary language more in line with the colloquial. Meanwhile the Calcutta colloquial—that used by educated people in West Bengal—rapidly gained ground, Calcutta being the intellectual centre of the Bengali nation, and students from every part of Bengal flocking thither in their theusands every year. This fact has brought about a linguistic unity in Bengal such as was never known before. The upper classes everywhere speak or try to speak the language of the educated people of Calcutta and of the surrounding districts, and the old dialectal peculiarities, at least in the speech of the upper classes, are fast vanishing. We have thus now a standard colloquial which is understood by all classes, and is spoken everywhere by the educated.

Within recent years there has arisen a strong movement to employ this standard colloquial for purposes of ordinary literature. It has a grammar more advanced than that of the literary language, or $s\bar{a}dhu\ bh\bar{a}sh\bar{a}$. Thus fixed karitechke has become fixed korchke or fixed kochchke, and fixed kariyā has become fixed kore; a large amount of colloquial idioms and words are employed, and the syntax is not the stiff, lifeless syntax of High Bengali, but is more flexible, more vivid, and more true to the native spirit. Already in the drama, in poetry, and in most novels, the standard colloquial has obtained a dominant position, but in literary prose there is still a very numerous class of writers who continue to employ only the forms of High Bengali,—forms which represent the state of things in the speech of three or four centuries ago.

While the Standard (Calcutta) Colloquial has deviated considerably from the old form, the East Bengal dialects are on the other hand more Conservative, and preserve to a greater extent the forms of the old language; but it must also be said that among the advocates of the employment of the Standard Colloquial for all literature, there are quite a number of writers from East Bengal who, in speaking, have not even wholly got rid of their East Bengal accent. In short, we have at the present day two forms of Bengali in actual employment,—the sādhu bhāshā, which is sādhu only in sticking to an older form of grammar, but is not nearly so Sanskritized as it was under the auspices of the Pandits of the College of Fort William and their successors,—and the chality bhāshā. Sir Rabindranath Tagore uses both with equal strength. In the Standard Colloquial, as employed in writing, there is ordinarily no attempt to employ any standardized or systematized spelling. Those who are more careful in this matter try to make the spelling true to the pronunciation by inserting an apestrophe, which is intended to show that an i-sound has been dropped and that the preceding a has been changed to \bar{o} ; e. g. $\Phi \zeta \bar{s}$, he does, is kore in both the literary and colloquial, while कित्रश, having done, -the kariya of literary language, -has become क'द्र, kore, in the colloquial, and this kore is written o'ld, or colla, and by careless writers simply old, which may be confused with করে, he does. So হইল, hila he became of the literary language, should, for the colloquial, be written হ'ল, hōlō, but we find it quite frequently written হোলো, হলো, খোল, or হল.

¹ For instance, Sarvānanda, a writer of West Bengal, in a commentary (dated 1159) on the dictionary called the 'Amarakōśa' in explaining the word sidhmalā, dried fish, says with evident contempt, that it is the kind of thin; which people who conduct themselves like Baṅgālas enjoy.

BENGALI, 223

Page 16, line 19.—Bengali Literature. Attention must here be drawn to an important book which has been described in two articles in the Journal of the Baugiya Sahitya Parishad for 1323 B. s. (1916 A. D.), and by Father Hosten in Vol. IX of 'Bengal Past and Present'. It is entitled Crepar Xastrer 1 (i. e., Shastrer) Orth Bhed or 'The Exposition of the Doctrine of Mercy', an old Bengali account of the Roman Catholic faith composed by Father Frey Manoel da Assumpçaó, Portuguese Augustinian Missionary at Nagori, Bhawal, near Dacca. It was composed throughout in the Bengali language written in the Roman character on each left-hand page with a Portuguese version facing it on the right, in the year 1734 A.D., and was printed in Lisbon in 1743. A mutilated copy of it has survived in the library of the Asiatic Society of Bengal. This, with the same author's Bengali Vocabulary (see p. 23) and a catechism, both printed in the same year, are probably the first books ever printed in the Bengali language. The Crepar Xastrer Orth Bhed is of great importance for the history of that form of speech, for, owing to its being printed phonetically in the Roman character, it gives a very clear idea of the Dacca pronunciation of Bengali in the middle of the 18th century.

I have said that this book is probably one of the first Bengali books printed, but it is possible that there may have been one earlier. I owe to the kindness of Dr L. Barnett of the British Museum the following translation of an extract from the report of Francisco Fernandez (died A. D. 1602) to his Jesuit superiors written in 1599 from the city of Siripura². He says:—

'The children [at the port of Siripura] came out to greet us, singing in procession and begging us most earnestly to teach them and indoctrinate them, because they were idle and lost for lack of a teacher. Their entreaty moved us so much that, being unable ourselves to attend to their instruction, we arranged with one of those in our company that he should set up a school and undertake the [teaching] of these children; and this was the first, and not the least important, act of our Mission. And in order that it might be more beneficial, I composed a short Catechism of the mysteries of our faith by way of questions and answers, which Father Domingo de Sosa translated into their language, and it is profitable not only to the children but also to the adults and to the Portuguese themselves; for they teach thereby the Christian doctrine to their male and female slaves and to the people of the land who are subject to them.'

This must be the oldest European work in Bengali, but I do not know whether it was ever printed. Fernandez wrote this letter in January 1599, and embarked on his voyage from Cochin to Bengal in May 1598. So the catechism was composed, and translated by De Sosa, in 1598.

¹ The Portuguese represented the sh-sound of Bengali by x.

² Taken from Bartholome Alcazar's Chrono-historia de la Compañia de Jesus, en la Provincia de Toledo, 2 Parte (Madrid, 1710), pp. 290ff.

ORIYĀ.

Page 370.—Section dealing with Oriya literature. Babu Monmohan Chakravarti has given me the following fuller note, which should be substituted for the account on this page taken from Beames' Comparative Grammar:—

Excepting a few Bamsābaļis, or genealogical works, the entire Oriyā literature is in poetry. The existing works do not go beyond the 16th century A. D.; but Oriyā words and sentences have been found in inscriptions of the 14th century. The earliest compositions appear to have been lost.

Among Pre-British productions the earliest are songs and religious translations. The songs are chiefly in the form of *chautisās*, or groups of four or more couplets, but occasionally in *chhandas* (ordinary verses) or *chhapois* (groups of six couplets). As a rule they deal with the love of Rādhā and Kṛishṇa, and only rarely with human love. Of the religious poems the most popular are:—

- i. The Bhāgabata of Jagannātha Dāsa (first half of 16th century).
- ii. The Rābāṇa [Rāmāyaṇa] of Baļarāma Dāsa (circa first quarter of the 16th century).
- iii. The *Bhārata* of Sāroļā Dāsa (not earlier than the first half of the **16**th century).
- 1v. The Harabamsa of Achyutananda Dasa (beginning of the 16th century).

These poems are not translations, but summaries and free adaptations of the Sanskrit originals. They, and especially the *Bhāgabata*, exercised and still exercise an immense influence on the Oriyā intellect and feelings; and, though poetically not of a high order, they paved the way for the later poets.

Among the later poets the chief names are (i) Dīna-kṛushṇa Dāsa, (ii) Upēndra Bhañja, and (iii) Abhimanyu Sāmantasimhāra. Their poetry more or less follows the later Sanskrit classics, and adopts the rules of Sanskrit alamkāras.

Dīna-kṛushṇa Dāsa preceded Upēndra Bhañja and composed the well-known poem the Rasa-kallola, which deals with the early life of Kṛishṇa at Vṛindāvana and Mathurā. Every line in it begins with the letter ka.

Upëndra Bhañja, who flourished towards the end of the 17th century, belonged to the royal family of Gumsura, a petty hill state in the Ganjam District in Madras. With his father, he was driven out in a family war, and is said to have settled in Nayāgarh another petty hill state, now in Orissa. The most celebrated of the Oriya poets, and the most prolific, his fame chiefly rests on his two fictional poems, the Lābanyabatī and the Kōṭibrahmāndasundarī, both called after the names of their heroines, and on the Baidēhīsabilāsa, which is based on the Rāmāyaṇa. He composed in all forty-two works, of which at least twenty were based on fiction. His poems forms storehouses of rhetorical excellences and show a master's hand in vocabulary and word selection; but, by the use of innumerable Sanskrit synonyms and verbal formations, his verse has been made unintelligible and has further been disfigured by obscene descriptions.

Abhimanyu Sămantasimhara (A. D. 1758-1806) also came of a Zamindâr's family. He belonged to the Cuttack District, and is said to have died at Vrindâvana as a Vaishṇava

OŖIYĂ. 225

ascetic. He is credited with six poems, of which the best known is the Bidaydha-chintāmaṇi, based on the Sanskrit Vidagdha-mādhava of Rūpa Gōsvāmi, the disciple of Chaitanya. No other Oṛiyā poem contains so many rhetorical gems or so much abstract poetry as this work.

A century of British occupation and consequent peace has not yet much stimulated Oriya composition. Among recent publications a few poems by Rai Radhanath Ray Bahadur, late Inspector of Schools, seem noticeable, but the bulk of modern works consists of doggrel or of translations or adaptations from English or Bengali. [This was written in 1900.—G. A. G.]

Page 441.—The following Standard List of Words and Sentences in Oriyā has been prepared by Babu Monmohan Chakravarti. It is more correct, and is in a more colloquial style than that given on pp. 441ff.

STANDARD LIST OF WORDS AND SENTENCES IN THE ORIYA (COLLOQUIAL) LANGUAGE.

Oriyā--230

VOLUME VI.

Page 62.—Specimen II of the Awadhī spoken in Lucknow District. In a review of this Volume of the Survey in 'Saraswatī', a magazine published in Allahabad, for May, 1905, the specimens of the Awadhī of Lucknow are criticized as incorrect, and the following alternative version of the second specimen is offered. It is from the pen of Pandit Syām Bihārī Miśra, whose home is in that District:—

Page 86, l. 10.—I say here that the Awadhī of Rae Bareli closely resembles that of the west of Partabgarh. The writer of the review of this volume of the Survey in 'Saraswatī' for May, 1905, who states that he has lived for thirty-seven years in Rae Bareli and speaks the dialect as his native tongue, writes that this is true only for those parts of Rae Bareli that adjoin Partabgarh. He states that elsewhere not only is it different, but is the centre of the tract the language of which is rightly named Baiswarī (see page 9). As a specimen of this 'Baiswārī', as spoken in other parts of Rae Bareli, he gives the following version of the specimen given on pp. 84 and 85 for West Partabgarh. It will be seen that there are considerable differences:—

Yakan-kē ghar-mã kathā hôti-rahai. Un One(-man)-ofthe-house-in a(-religious)-recital was-taking-place. Hegãw-bhare-kā nyautā dīn-rahai. Sunawaiyan-ma ĕku Ahirau the-whole-village-to invitation given-had. The-audience-among one cowherd-also Kathā rahai. sunai-kī-beriyā wahu rwāwā bahut karai. Jī The-recital at-the-time-of-hearing was. he weeping muchWhat made. kathā bāchati rahaĩ, ui wahi-kā nandit prēmi jāni-kai Pandit recital reading of-a-religious-turn-of-mind considering was, himnikī-tanā baithāwaĩ khātir khub karaĩ. din pandit in-a-good-way made-him-sit and much respect mode. One daythe-Pandit pūchen ki, 'bhagāni bhāi, tum vat^anā rwawati kahe-ka hau? Tum Sir brother, you so-much weeping whyYou kā jāni-parat-hai? Yah suni-kai Ahirawa aurau what what understand?' This heard-having the-cowherd still-more violently Wah bwala ki, rwawai-lag. 'Maharaj, mōrē bhaĩsi violently to-weep-began. said that, 'Reverend-Sir, to-me Heone she-buffalo biyani-rahai. Wah najaryāy-gai $\mathbf{a}\mathbf{u}$ paraunā-kā nagachyāy na dēi. calved-had. She became-sick the-calf to-approach not allowed.

Wahi-ki tanā, Paraunā din-bhari chillān au sãihalī-jūn mari-gā. The-calf the-whole-day at-evening-time died.This-of manner. lowed and mahī-kā dēru tumªhữ din-bhari chillāti-hau. Yahi-tē Pandit, O-Pandit, you-also lowing-art. This-from me-to fear the-whole-day lāgat-hai, kataũ tumhũ wahi-ki nāhĩt mari-jāw. ki $n\bar{a}$ may-die. seizes, by-chance you-also it-of like

The Free Translation is as on p. 83, except that in this version it is not stated that it was the Pandit who had issued the invitation to the recitation. This is correct, for such an invitation is not issued by the Pandit reciter, but by the householder who engages him for the ceremony.

Page 185.—As noted in the Addenda Minora to page 26, a new edition of Mr. Hírálál's Chhattīsgaṛhī Grammar, was brought out in 1921, under the editorship of Paṇḍit Lōchan Prasād Kāvya-vinōd. That gentleman has very kindly sent me the following version of the Parable of the Prodigal Son, in the Chhattīsgaṛhī spoken in the District of Raipur, which has been carefully revised by scholars of that locality. It may therefore be taken as a correct example of at least one form of that dialect, which, of course, varies from place to place, and also according to the personal equation of the speaker. The grammar is the same as that shown on pp. 28 and 29, the only important exception being that the genitive singular of pronouns ends in -khar instead of -kar. Thus $\delta khar$, instead of δkar , of him. Similarly $t\bar{e}khar$, of that, and $\bar{e}khar$, of this. In the original, as sent by the Paṇḍit, no distinction is made between short c and long \bar{e} , or between short c and long \bar{e} . In preparing the specimen for the press, I have thought it best not to attempt to mark these distinctions on my own authority, and hence I have left every c and c without any diacritical mark. I must add that the interlinear translation is unine, and that I alone am responsible for it.

VOLUME VII.

Page 194.—I am indebted to Mr. R. E. Enthoven, C.I.E., for the following list of words in the Kuḍaṭī dialect, as spoken by Maraṭhās, Bhaṇḍarīs, etc. of the Malvan and Vengurla Talukas of the Ratnagiri District:—

1	Ku ḍāļ ī word.	Equivale	nt in Marāthi.	Meaning.
श्राडसार	$ar{a} \dot{q}^a s ar{a} r$	शह ळे	śah $ar{a}$ į $oldsymbol{\widetilde{e}}$	A tender coco-nut.
श्राफडणाँ	$ar{a}$ p had^a ņ $oldsymbol{\widehat{a}}$	शिवणेँ	ś iv^a ņ $\widetilde{ ilde{e}}$	To touch.
श्रायट	āya ṭ	साँचा	$s\widetilde{\tilde{a}}ch ilde{a}$	A mould.
त्रायदान	$ar{a}y^adar{a}n$	भाँडे	$bh\widetilde{ec{a}}d\widehat{ec{e}}$	A utensil.
दूरस	iras	चाकाचा ग्राम	chākā-chā ās	The axle of a wheel.
उडकी	$u \dot{q}^a k ar{\imath}$	उ डी	$ud\bar{\imath}$	A jump.
उप णाँ	$up^a\eta\widetilde{ar{a}}$	पेरणेँ	$p ec{e} r^a n \widetilde{ec{e}}$	To sow.
उबलाँ	$ub^a l \widetilde{\overline{a}}$	दरवाजाची चौकट	t dar ^a wajā-ch ī chauk a ţ.	The frame of a door.
उम ळणाँ	$oldsymbol{u} maoldsymbol{l}^a$ ทุ $\widetilde{oldsymbol{ ilde{a}}}$	ધુર્વા	dhuṇễ	To wash.
कामेरोण	kāmērīņ	मोलकरीण	mõl-karī ņ	$\Lambda \ \mathrm{ma^{i}d} ext{-servant}.$
कुरडो	$kur^{*}d ilde{o}$	শ্বাধিক্তা	$\widetilde{ar{a}}dh^a la$	Blind.
खोराण	khōrā ņ	कोन्हाडा	kōn h àḍā	A niche.
खाला	khōlō	पान	pān	Λ leaf.
गजास	$g \pmb{a} \pmb{j} ar{a} \pmb{l}$	गोष्ट	$g ar{o} s h ar{t} a$	A story, tale.
गराद	$garar{a}d$	मोठी खिडको	mõt hī khiḍakī	A large window,
गिचको	$gich$ " $kar{\imath}$	घ ेरो	$ghar{e}rar{\imath}$	A swoon.
गीम	$g ar{\iota} m$	उन्हाळा	unhāļā	Summer.
ग्ंडो	$m{g}unm{d}ar{o}$	दगङ	dagaḍ	A stone.
जंगो	$oldsymbol{ja\dot{n}}oldsymbol{g}ar{\imath}$	लहान खिडकी	lahān khīḍākī	A small window.
भिलगो	$jhil^ag ilde{o}$	मुलगा	$m{m}um{l}^a gar{a}$	A boy.
तळप	talap	खडकाळ जमीन	khaḍ¹kāḷ jamīn	Rocky soil.
नडणी	naợ"ṇ ĩ	बेग्ग गें	$b ar{e} n^a n ar{ ilde{e}}$	Weeding.
नास	$n ilde{a}l$	नारक	nă r aļ	A coco-nut.
पिलॉॅंव	$pilar{ar{a}}v$	पोलाद	põlä d	Steel.

K	udāļi word.	E qui v a	alent in Marāţhī.	Meaning.
पुडियां	p u $diy\widetilde{ ilde{a}}$	घोतर	$dh\bar{o}tar$	A costly waistcoat worn on ceremonial occa- sions.
पेँचणाँ	$poldsymbol{ ilde{e}}ch^aoldsymbol{n}oldsymbol{ ilde{a}}$	चिरणें	$chir^a$ ņ $oldsymbol{\widetilde{ar{e}}}$	To split.
पोनो	pōlō	. गाल	$g ilde{a} l$	The cheek.
फाल्याँ	$phar{a}m{l}ym{\widehat{ar{a}}}$	उदा ाँ	$udy \widehat{m{a}}$	Tomorrow.
बकरा	$m{b}ak^arar{a}$	<u>घोडें</u>	thōḍ ē	A little.
मानाय	mānāy	गडी	$gadar{\imath}$	A labourer.
राजू	$rar{a}jar{u}$	दोर	$d ilde{o} r$	A rope.
वळय	vaļa ya	माजघर	māj-ghar	The central compartment of a house.
सकळ	sakal	लवकर	lavakar	Soon.
सीमताँ	sõ $m^a t \widehat{ar{a}}$	ताबडतोब	$tar{a}baar{q}$ - $tar{o}b$	Immediately.
इडगी	$haar{q}^agar{\imath}$	टोपनी	$tar{o}oldsymbol{p}^a lar{oldsymbol{i}}$	A basket.
इ ाडगाँ	$\pmb{h}ad^a\pmb{n}\widehat{ar{a}}$	आग्राग्	ăņa ņ $\hat{ar{e}}$	To bring.
चाँवडणाँ	$h \widehat{ar{a}} v a \dot{q}^a n \widehat{ar{a}}$	इॉक गें	$h\widetilde{\widetilde{a}} k^a n\widetilde{\widetilde{e}}$	To drive.
होँडको	$h\widetilde{ar{o}}\dot{d}^akar{o}$	खळगा	$khal^agar{a}$	A ditch.
होरणाँ	$har{m{o}}m{r}^am{n}m{\widetilde{m{a}}}$	ने गाँ	$nar{e}$ $nar{ar{e}}$	To carry.

VOLUME VIII—PART II.

As these Addenda were passing through the press, I received valuable information regarding the Dardic languages, and other forms of speech current on the North-West Frontier, from Dr. Morgenstierne, collected by him during a residence in Kabul, where he had unique opportunities for meeting speakers of many languages of Eastern Afghanistan. With great liberality he has placed at my disposal the following abstract of the results of his researches, so far as they regard the tongues of Western Dardistan. His additional notes regarding Eranian languages will be found in the Addenda to Volume X (p. 385). These abstracts have been given by him with the kind permission of the Norwegian Institute for Comparative Research in Human Culture (Norsk Institutt for Sammenlignende Kulturforskning). His materials will, in due course, be published in full by that Society. The first set of notes furnished by him deals with the Kāfir languages, and is as follows. I am responsible for the spelling of the words, which (in regard to vowels) I have here and there altered from Dr. Morgenstierne's in order to agree with the rougher system followed in the Survey. The letter \hat{u} indicates an open \hat{u} , between u and o.

Bashgalī (Katī). [Survey, Vol. VIII, Pt. ii, pp. 32ff.]

Bashgalī is spoken not only in the Bashgal valley, but also in the valleys of Ktivī, Kulum, and Ramgel in Western Kāfiristān. As the name 'Bashgal' denotes only the lower part of the valley round Kāmdēsh, it would be better to call the language Katī, as the whole tribe speaking it is called. The two sections of the Katī-speaking people are now separated by the Prasūs (Presuns), but according to their traditions, they originally all came from Ktivī (Ktī). The absence of important dialectic differences seems to indicate that the separation has not lasted for a very long time.

In some cases the Western Katī has preserved older forms. E.g., corresponding to Bashgalī (Kāmdēsh) <u>sh</u>to, four, we find chtva.

It must be observed that the ordinary Indian r is not met with in Katī. The sound usually written thus is a post-alveolar, spirantic r, without any flap, which I write r. It never occurs after dentals, but regularly after k, g, p, b. E.g., $tr\ddot{a}$, three; $dr\ddot{u}$, a hair; thin; but $gr\dot{u}m$, village; $br\dot{u}$, brother.

The first Sentences of the Parable in the Dialect of Ramgel.

manchi $\mathbf{m}^{a}\mathbf{r}^{a}$ väisya-m·m. Sta dyu dyâ Ew p^a-mīj^a children had-formerly. The twotwo One man from-among 'ēi tât*st* ji-kuna, tâ, päets kaste tuste pr'amar' mâl , O father-to saying-does, father, boy whatever thygoodsyoung kiti Sta ave. mâl asht-bâ, emâ beti beti kar'āsyā-mam havin**g-ma**de give.' Some son to-them goods $\mathbf{g}^{a}l\tilde{a}$ guâsya-mam. ude<u>sh</u>e wasineiti, he-went-then. having-collected, to foreign countries

WAI-ALĀ (WĀIGALĪ). [Survey, pp. 45ff.]

There are two main dialects of Wāigalī. To the one group belong the dialect described in the Survey, the language of the vocabularies given by Burnes and Lumsden, and also the dialect of Wr'enchegal (locally pronounced Zhönjigal) which I had occasion to study. To the other group belong the form of speech described in Vigne's vocabulary, and the dialect of Kēgal in the lower part of the Wāigal valley.

As will be seen from the vocabularies, the chief differences consist in the Kēgal (marked K. in the specimen below) dialect having ew for 'one,' while the Zhönjigal (marked Zh. below) dialect has ek, and, in the personal pronouns, e.g., K. an, I, Zh. $y\bar{e}$. Wāigalī possesses both the Indian r and the alveolar r of Katī.

The first Sentences of the Parable in the Dialects of Waigali.

Wasi-veri or Veron (Prasu). [Survey, pp. 59ff.]

Of Prasu (i.e., Veron) I had only the opportunity to collect a short vocabulary, which agrees fairly with that given in the Linguistic Survey of India. Most of the words agree with Kati, although transformed in their appearance through strange phonetical changes.

Ashk \tilde{u} is spoken in the mountains between the Alingar and the Pech valleys, and is divided into two dialects. The western, spoken in Majegal and Masevi towards Mangu, is characterized by the transition of kr, gr, pr, and br to kl, gl, pl, and bl, respectively, (but tr, dr, remain unchanged, just as in Katī the dentals have dentalized the r). E.g., $kl\bar{o}m$, roof; glam, village; $pl\tilde{a}$, baby; bla, brother; against eastern $Ashk\tilde{u}$

ASHKUND. 249

krum; ...; $pr\tilde{a}$ and bru. The eastern dialect is spoken towards the Pech valley, in Titin, Tser \tilde{u} , and possibly in Vāmā. In Kurdār Pashai is spoken.

The language is called Ashkū (eastern dialect) or Ashkūrū (western dialect), but the name is said to have no meaning like 'Bare Mountains.'

It will be seen that Ashkũ is closely related to Wāigalī, but in some cases sides with Katī. The Kāfir language described by Trumpp is identical with the Majegal dialect, and also the few sentences given by Tanner (P. R. G. S., III, pp. 291ff.) are in Ashkũ.

The First Sentences of the Parable in Ashku.

belēi. \mathbf{A} dō västege. Ki lakurä mr'āk días mats zaga Onemanhad. Thisfather-his-to t**w**o sonsyounger boy said, gūi.' . Ο dia. yữ Däi tōa māl maţī $m\bar{a}l$ · 0 father, your property having-divided to-me give. The-father property zagāres \mathbf{m}^{a} ți <u>Ts</u>īt $\mathbf{m}^{\mathrm{a}}\mathbf{t}\mathbf{\tilde{\imath}}$ pr'ote. wās having-divided between-his-sons having-divided Some days (later) gave. lakureste zagās māl āshēitsi gula aŭngei, zada ta ge. the-younger son-his having-collected property took, othercountry to went.

Dr. Morgenstierne has also supplied the following lists of words in the above languages. As before, I am responsible for the spelling of the words, which (in regard to vowels) I have here and there altered from Dr. Morgenstierne's in order to agree with the rougher system followed in the Survey.

PASHAI. 259

PASHAI (PASHAI). [Survey, pp. 89 ff.]

This language is spoken not only in the Kunar valley and in Laghman, but also in a zone extending from Waigal in the East to Gulbahār (NE. of Chārikār) in the West. It is divided into a great number of considerably diverging dialects. These can be arranged in four groups.

(1) The North-Western Group, comprising the dialects near Gulbahār, in the Shutul valley, etc. It is characterized by the preservation not only of tr, dr, but also of kr, gr, pr, br, and mr, (e.g., $k^u r um$, work; $k^u r \bar{u}$, shouting; $m^u r \bar{\imath}$, dead; $b^a r \bar{\imath} i$, $b^a r \bar{\imath} i$, brother), by the form $m \bar{\imath} m \bar{\imath} a$, you, and by the ending of the first person plural, as in $a \bar{\imath} s$, we are. This suffix presents the transitional form between the Khōwār -as, Pashaī -as, -aes, and Veron (Prasů) -m sho, Wāigalī and Katī -m ish (from - $m asi > * -m \ddot{\imath} s^i$).

The frequent transition of \bar{a} to \bar{o} and \bar{u} , and the formation of the present with t (<u>zh</u>ētoyem, I am eating) connects this group with, —

(2) The dialects spoken in the Özbin valley (west of Laghman, about Bali Khel and Ghas) and in the upper Alishang valley (about Najil).

Here kr and pr result in sh, and gr and br in l, while tr and dr are preserved (Özbīnī sham, work; $shav\bar{o}r$ ($< prah\bar{a}ra$ -), wounded; $l\bar{o}m^a$, a village; Najīlī $l\bar{a}y$, brother; but tra, three; $dr\bar{o}n\bar{o}k$, rainbow.

(3) The dialects of Tagau, Nijrau, and Bedrau (in Ishpī, Iskyēn, Laurovān, etc.). Here also pr and kr result in l (e.g. Laurovānī $la\bar{a}r$, wounded; $l\bar{a}m$, work).

In all these three groups of dialects, the aspiration of medials has to some extent been preserved.

(4) This group comprises all the dialects of Laghman, Alingār, Kunar, and the lower Pech valley. Here br, gr, and also dr have developed into l, while pr, kr, and tr result in th or similar sounds.

The First Sentences of the Parable in the Dialect of Kona Dīh, near Gulbahār.

Ī ādam dō putra dāräi. Τē kuchāst puträ-i-yakaţī dādas-äi One man twohad. Themfather-his-to sons from-among son-the-small mārāta, ' ai dádā, mui ta<u>kh</u>sīmas∙am dē dā.' Mālā tanka said, 'O father, to-me give.' part-mine (sign of acc.) Property his-own dē takhsim kawata, tē dětea. pachawā puträ-i-yakaţī wa<u>kh</u>t (acc.) division he-made, to-them he-gave. Some time afterwards son-the-small chūkas-a dē gugia, sudüre jē gui. all-his (acc.) seized, far towent.

In the Dialect of Laurovan (Tagan).

Ī ādamas dō ôya haich. Suratalā putras-ā bávai māraikyē, 'āi One man-to twochildrenwere. The-younger son-his father-to said, bābā, kor ke tānkyäi jiraē yēitik, maina däya. Bādaz father, whatever thatpart-thine to-meowncomes, give.' Afterwards 202

bàsa māl aḍa aḍa däikyē, guraik, suratalai däikyē, aulai father-his property seized, the-half younger-to gave, the-half elder-to $gav\epsilon$. suratala putrasā, aļṭª, nau dū kān, chüikya kor ke Afterwards the-younger son-his, eight, nine days after, allwhatever that jirāy-a yeyāik, kakª. Sudūrāi vatan gyīk. jam part-to-his had-come, collected made. **Far** country went.

Dr. Morgenstierne has also supplied the following List of Words in the various dialects of Pashai:—

264- · Pashai.

Page 110.—On page 2, line 22, of Part ii of Volume VIII, I stated that no specimens could be obtained of the Tirāhī language. All that had hitherto been known about it was contained in a short list of words published by Leech in the year 1838. This was sufficient to show that it belonged to the Kalāshā-Pashai Sub-Group of the Kāfir Group of the Dardic languages.

According to Leech, the speakers once inhabited the Tirā Valley (hence the name of the tribe and of their language), now the home of the Afrīdī Afghāns, and, in consequence of a feud breaking out between the Ōrakzāīs and the Afrīdīs, they left that tract and settled in the Ningrahār country, where they are now found. Their principal villages are at the present day said to be Jaba, Mitarānī, and Barā-khēl. Jaba is shown on sheet 38J of the four miles to the inch Indian Survey degree sheets, and on sheet 14 of the Indian Atlas sheets on the same scale. It is situated in the Kōt-darra Valley south of the Kābul River, about 20 miles in a direct line west of Dakka Fort, and about half way between Dakka and Jalalabad, but south of the main road.

Among their Afghān neighbours, these people have not the best of characters, and a Tirāhī is generally unwilling to admit that he is a member of the tribe or that he knows anything of its language. So far has this gone that in the neighbouring parts of British India, in the Peshawar District, there is an idea very generally current that the Tirāhī language is only a kind of gibberish used by transfrontier criminals when they wish to speak among themselves without being understood by outsiders.

For more than twenty-five years I had been endeavouring to secure specimens of this form of speech, but without success. Finally, Sir Aurel Stein added to the heavy debt of obligations owed by me to him by undertaking the search for a man who could speak it. In March 1919, by the friendly help of the late Colonel Sir George Roos-Keppel, then the Chief Commissioner of the North-West Frontier Province, an old labourer was found in Peshawar who professed to know Tirāhī. Unfortunately, to this accomplishment was added the fact that he was a confirmed opium eater, and after a few words and sentences had been collected from him, the attempt at probing his befogged memory had to be abandoned. Sir Aurel, however, did not abandon the quest, and his next attempt was more successful. In December 1921, through the help of his old and devoted Surveyor, Khan Sahib Afraz-gul, now of the Survey of India, there was found an intelligent old man named Shāh Rasūl, whose original home was in Jaha, but who had left his country for many years and was now resident in Nawa-kala. When Sir Aurel found that long absence from his home had impaired his facility in speaking his mother tongue, Shah Rasul secured the presence of a younger man whose memory was more trustworthy. Both the men were completely illiterate, and Sir Aurel found some difficulty in getting them to understand grammatical niceties such as the distinction between the different tenses of a verb; but, with their aid, he succeeded in writing down a Tirāhī translation of the Urdū version of the Parable of the Predigal Son, and in compiling a valuable list of words and illustrative sentences. These he has most

kindly placed at my disposal, and from them I have been able to compile the following grammatical sketch of the language. This is not complete, but it gives a very fair idea of the general features of Tirāhī. I also add the version of the Parable as written down by Sir Aurel (with an English interlinear translation of my own) together with the list of words and sentences prepared by him, and to the whole I append a vocabulary, which includes not only all the words in the above-mentioned specimens but also all those contained in Leech's word-list of 1838. There are a few words and phrases the meaning of which I have not succeeded in making clear to my own mind, and such I have marked with notes of interrogation, but even with these I think that, thanks to Sir Aurel Stein, a considerable advance in our knowledge of an interesting language has been attained.

As already stated, Tirāhī is certainly a Dardic language, and is closely connected with Kalāshā, Pashai, and Gawar-bati, but it is also to be noted that it shows clear points of relationship with Ṣḥiṇā and Kāshmīrī, Dardic languages spoken far to the North-East. Compare, for instance, Tirāhī sure, a child, with Kāshmīrī shur"; mala, a father, with Ṣḥiṇā mālō and Kāshmīrī möl"; and utha (not utha), stand up, with Kāshmīrī wŏth. As usual in Dardic languages, there are several words which have preserved in a remarkable manner the forms that obtained in the Sanskrit of two thousand years ago. Such are dēn, a cow, as compared with the Sanskrit dhēnuh, and ast, a hand, as compared with the Sanskrit hastaḥ. It is hardly necessary to add that, surrounded as the speakers are by Afghāns, they have freely borrowed from Pashtō.

The Pashai already referred to is spoken in Laghman, north of the River Kabul. Ningrahar, where Tirahi is spoken, lies to the south of that river. Further south, again, in Wazīristān, we come upon Ōrmurī, an Eranian form of speech, used by an immigrant tribe distinct from the Afghans. It is evident that at the time when the Ormurs arrived at their present site, they found themselves in close contact with a tribe of Dardic origin, for their language, though Eranian, shows clear traces of Dardic influence. Further south we come to the Khētrāns of Thal-Chotiāli. These people speak a corrupt Lahnda much mixed with Dardic forms. Finally, as has been pointed out in Volume VIII, Part i of the Survey, still further south we come to Sindhi, and in this, too, we find relics of some old Dardic language. In this way, Tirāhī forms an important link connecting the Dardic languages spoken in Dardistan, north of the Kabul, with a chain of three languages which show traces of ancient Dardic influence, and reach down to the mouth of the Indus. It is not necessary here to discuss the question of the extension of Dardic languages further south. It is sufficient to state that traces of them have been recognized in the Bhil languages of Central India, and even, with considerable plausibility, in the Kökani dialect of Marathi. If this last identification is finally accepted, Tirāhī gives us the hitherto missing link in a chain of languages once reaching from the Hindukush to Goa.

In the following pages, I give a reference for each word quoted, showing its original location. In such references "Par." indicates the version of the Parable of the Predigal Son, quoted by verse-number, and "L." indicates the List of Words and Sentences prepared by Sir Aurel Stein.

Pronunciation.

It must be remembered that the materials collected depend almost entirely on what was uttered by two illiterate men. Sir Aurel Stein, in recording the Tirāhī words uttered by them, most rightly refrained from any attempt at securing apparent uniformity, but wrote down for each word as nearly as possible the exact sound he heard in each particular case. In recording a language which has previously been reduced to writing, there is a more or less fixed standard of spelling and of pronunciation with which it is possible to secure conformity; but when a language has no standard,—and to a less extent, even in every language which has a standard,—the actual pronunciation of each word varies each time it is uttered, according to its collocation in the sentence or the mood of the speaker. In languages like English or Hindostani, these changes are partly held in check by the existence of a standard to which the speaker insensibly conforms, but in a language such as Tirāhī which has no standard, they are much more considerable, and we find the same word pronounced by these men in very different ways at different times. For instance, for 'man' the speakers at one time said $\bar{a}d^am$ and at another time adam; for 'good,' at one time brada, and at another breda; and for 'child,' at one time badana, with no stress on the penultimate, and at another time badána, with a strong stress on the penultimate. Under such circumstances, it would at present be dangerous to lay down any rules for a standard pronunciation of Tirāhi, and we must await further information on the subject. Suffice it to say here that this uncertainty occurs chiefly in regard to the vowels, and that the consonantal system appears to be pretty constant and to agree with that of the other Dardic languages.

The Article.

There appears to be an indefinite article corresponding to the Persian $y\bar{a}$ \bar{i} wahdat and the Kāshmīrī $-\bar{a}$. It is formed by adding i to the noun. A pretty certain example is <u>kh</u>arāb badani, a bad boy (badana) (L. 129).

For the definite article, the demonstrative pronoun le or $l\bar{a}$ is very commonly employed. Thus:—

le pakirasi ek ana de, give one anna to the fagir (L. 84).

le parána kuz ras zīn, the saddle of the white horse (L. 226).

le zīn kuzara dāk khum thā, put the saddle on the horse's back (L. 227).

le kila ek banyā-ma achhita ti, (I) have bought (it) from a shopkeeper of the village (L. 241).

chāna mala la breḍa batsa kukhto, thy father slaughtered the good calf (Par. 27).

lā gaņa putar ghusā khum gā, the elder son became in auger (Par. 28).

The demonstrative pronoun lema is similarly used before place-names. Thus:

lema Jaba-manzum sawa kuzara bradē tīna, in Jaba all horses are good (L. 140).

lema Kābula-manzum sawe barē kharāba tīna, in Kābul all mares are bad (L. 141).

VOL. I, PART I.

DECLENSION.

Nouns Substantive.

Gender.—There are not sufficient materials to form any rules as regards gender. All that can be said is that the feminine gender is recognized, and that many feminine nouns end in e or \bar{e} when, in India, they would end in \bar{i} . Thus we have $str\bar{e}$ (Indian $str\bar{i}$), a woman (List, 52, 53, 128); achchhe (Kāshmīrī achh), an eye (L. 35); $d\bar{e}$ (Indian $dh\bar{i}$), a daughter (L. 56, 110); $bar\bar{e}$, a mare (L. 139). With this we may compare brada adam, a good man (L. 120), and brada $str\bar{e}$, a good woman (L. 128), but $brad\bar{e}$ $str\bar{e}$, good women (L. 130); sura, small (L. 28), but $sur\bar{e}$, a little girl (L. 56); sawa kuz^ara , all horses (L. 140), and sawe $bar\bar{e}$, all mares (L. 141); ti, he is (L. 158), and $t\bar{e}$, she is (L. 53, 56).

Declension.—The Nominative case singular calls for no remarks. It takes no termination. When a noun is the subject of a transitive verb in a tense derived from the past participle, it is put into the Agentive case, which will be described further on.

The Accusative case singular is the same in form as the nominative. Thus:-

le pakīrasi ek āna dē, give one anua to the faqīr (L. 84).

asto-manzum angur tsiyā, pade-manzum panā tsiyā, put ye a ring on the hand, put ye a shoe on the foot (Par. 22).

ek breda batsa ānines, bring ye a good calf for him (Par. 23).

kui-ma uwa prēla, draw water from the well (L. 237).

khushālī karēm, let us make rejoicing (Par. 23).

le adam brok do, beat that man well (L. 236).

le khat malasi dēm, I give this letter to the father (L. 103).

The object of a transitive verb in a tense derived from the past participle is, as usual in connected languages, put in the nominative case, the subject being put into the case of the Agent. The following examples will suffice:—

chāna mala lā breḍa batsa kukhto, thy father slaughtered the good calf; lit. the good calf was slaughtered by the father (Par. 27).

mala gaṇa putrasi jawāb dita, the father gave answer to the elder son; lit. by the father answer was given to the elder son (Par. 31).

mala rām kere, the father made compassion; lit. by the father compassion was made (Par. 20).

sure put r tănu măl jama kere, the younger son collected his property; lit. by the younger son his property was made collected (Par. 13).

General Oblique case.—The General Oblique case singular is sometimes the same in form as the nominative. Thus:—

```
ghusā khum, in anger (Par. 28).
badmāshī khum, in debauchery (Par. 13).
kui-ma, from the well (L. 237).
kursi-ma, from the chair (L. 82).
dāk khum, (put) on (the horse's) back (L. 227). Cf. dāka khum below.
hukm-ma bāhr, outside (i.e., against) an order (Par. 29).
nazar-manzum, in (thy) sight (Par. 18). Cf. nazaram-manzum below.
putr khum, on the son (L. 228).
```

More often it ends in a, even when the nominative singular does not end in that letter. Thus:—

panda khum, (nom. pand), on a journey (L. 224).

 $d\bar{a}ka$ <u>kh</u>um (nom. $d\bar{a}k$), (riding) on the back (of a horse) (L. 230). Cf. $d\bar{a}k$ <u>kh</u>um above.

le mulka-manzum (nom. mulk), in that country (Par. 14). Cf. mulke-manzum below.

mala tarafē (nom. mala), towards the father. mala-ma, from a father (L. 104). māla-manzum (nom. māl), in the property (Par. 12). Cf. māla taksīm, division of the property (Par. 12).

 $d\bar{a}ma \ \underline{kh}um \ (nom. \ d\bar{a}m), \ (bind) \ with a \ rope \ (L. \ 236).$

brada adama-ma (nom. adam), from a good man (L. 122).

thāna-manzum (nom. thān), in the house (L. 83, 130, 223, 226, 233).

 $\underline{kh}\underline{a}ra \ \underline{kh}um \ (\text{nom. } \underline{kh}\underline{a}r), \text{ on the top } (\text{L. 229}).$

lema wakta khum (nom. wakt), at that time (L. 162). So wakta-manzum (L. 163).

When a general oblique case is followed by an enclitic word beginning with a consonant, that consonant is sometimes doubled, and one of the pair is added to the oblique case. Thus:—

chāna nazaram-manzum (for nazara-manzum), in thy sight (Par. 21).

brichat-tona (nom. brich), under a tree (L. 230). Cf. ut ti, for \bar{u} ti, he has come, given below under the perfect tense.

Occasionally we find the general oblique case ending in some other vowel. Such are:—

mula $taraf\bar{e}$ (nom. taraf) \bar{u} , he came in the direction of (i.e., towards) the father (Par. 23).

le mulke-manzum, in that country (Par. 14). Cf. mulke-manzum above.

pade-manzum (nom. padī), on the foot (Par. 22).

uṛē (or ōre)-manzum, in his heart (Par. 16, 17). The Nom. Sing. of this word

tsuk" daze pas (nom. daz), after a few days (Par. 13).

asto-manzum (nom. ast), on the hand (Par. 22).

appears to be ure, as in Par. 22.

jango-wakta (nom. jang), at the time of fighting (L. 163).

Two words are irregular. The word $d\bar{e}$, a daughter, has its oblique singular dun, and spaz, a sister, has spazun. These will be dealt with lower down.

Another form of the oblique ends in asi, often shortened to as or is. This is most often used as a dative, but is also used in other collocations. Thus:—

brada adamasi, to a good man (L. 121). le rū pai le adamasi dē, give this rupee to that man (L. 234).

dési, to a daughter (L. 112).

gā dūr mulkasi, he went to a far country (Par. 13).

malasi, to a father (L. 103). mē tānu malasi bazam, I shall go to my father (Par. 18). le malasi jawāb dita, he gave answer to the father (Par. 29).

mē le adam diyanasi dita wa, I gave that man for a beating (i.e., to be beaten) (L. 177).

mên samo tre ādamo <u>kh</u>ārasi da bazam, we three men all go to the town (L. 17). masi munāsib, proper for me (Par. 21).

te pakīrasi ek āna dē, give one anna to the faqīr (L. 84).

mala gana putrasi jawāb dita, the father gave answer to the elder son (Par. 31). au az thānasi ēma, I come to the house to-day (L. 80).

las pukhla kere, made conciliation to him (Par. 28).

ek tānu naukaris ga ti, he is gone to one of his servants (Par. 26).

This termination is also commonly used for the genitive, and, in this case, as seems to be more commonly employed than asi. Thus:—

lemas shisi (nom. shi) kimat, the price of that thing (L. 232). Here we have both as and (a)si.

brada adamas than bogha ti, the house of a good man is near (L. 120).

le parána kuzaras zīn, the saddle of the white horse (L. 226).

le than malas ti, this is the father's house (L. 102).

chāna sanās (nom. sanā) dante brōk trighna tīna, the teeth of thy dog are very sharp (L. 146).

myāna troras putar, the son of my uncle (L. 225).

It should be noted that it is sometimes difficult to say whether this termination as is a case termination, or is a pronominal suffix. In the following, as probably means 'his':—

tānu mālas badmāshī khum chi kere, he wasted his substance in riotous living (Par. 13). But in this instance it is also possible that mālas is a dative used as a definite accusative.

le malas gā, his father went (Par. 28). Here the as is almost certainly a pronominal suffix.

In the following, the termination asi forms the general oblique case:—

khā thānasi bōgha ō, when he came near the house (Par. 25).

Sometimes the termination asi is employed where we should use the ablative. Thus:—

te kāma adamasi (or adama-ma) achhita ti, from what man didst thou buy that (L. 240)?

myana dunsi khat ut ti, a letter has come from my daughter (L. 113).

lema jaisi (nom. jai) Kashmīr katési dūr ti, how far is Kashmir from this place (L. 222)?

We have an ablative of comparison in:-

lema brijasi le kaza ti, this is higher than that tower (L. 136).

lemas spazunsi le adamas brā kaza ti, the brother of that man is taller than his sister (L. 231).

We shall see subsequently that an ablative of comparison can also be made with the help of the postposition ma.

With regard to the above examples, note that the words $d\bar{e}$, a daughter, and spaz, a sister, form the oblique singular by adding un,—thus, dun and spazun. Note also that, as we shall see, the termination asi also occurs in the plural. It seems probable that here plural forms have been carelessly used for the singular.

We have just seen that the *Genitive* is commonly indicated by the termination as. It may also be indicated by simply prefixing the unaltered word to the governing noun. Thus:—

le kila ek banyā-ma, from a shopkeeper of the village (L. 241).

brēkhta (? nominative) khāra khum, on the top of a hill (L. 229).

 $kuz^{n}ra\ d\bar{a}k\ \underline{kh}um$, on the horse's back (L. 227). Cf. $kuz^{n}ras\ z\bar{\imath}n$, the horse's saddle, in 226.

chāna mala thāna-manzum, in thy father's house (L. 223).

myāna mal brok mazdurāno wāna, there were many servants of my father (Par. 17).

tsālī tsindar, a goat's kid (Par. 29).

āsmān nazar-manzum, in the sight of heaven (Par. 18, 21).

domāma āwāz, the sound of a drum (Par. 25).

galiz wakta khum, at the time of theft (L. 164).

It is probable that the Agentive case singular employed for the subject of a verb in a tense formed from the past participle, should be described as identical in form with the general oblique case as in other Dardic languages. But, as we have seen, this general oblique case is itself often identical in form with the nominative, and it happens that the few instances of the Agentive that occur in the Parable all also agree in form with the nominative singular. It may be mentioned that in Ormuri, an Eranian language, spoken not far off in Waziristan, which is much influenced by Dardic, the Agentive is always the same in form as the nominative.

The following examples of the Agentive case of nouns substantive are found in the Parable. No instances occur in the List of Words:—

sure put'r mala ditanas, the younger son said to the father (Par. 12). See the remarks on ditanas on p. 294, under the head of the past tense.

sure put'r tānu māl jama kere, the younger son collected his property (Par. 12).

le adam tānu tsakalānsi prēgī, that man sent (him) to his fields (Par. 15).

mala tānu naukarānosi arī, the father said to his servants (Par. 22).

mala gana putrasi jawab dita, the father gave answer to the elder son (Par. 31).

In two cases the Agentive case is formed by the addition of the postposition na (compare the Hindostānī $n\bar{e}$). This postposition is more often used to form a dative, and in the first of the two instances it is employed in both senses:—

```
putre-na le-na arī, the son said to him (Par. 21). le-na lāsi arī, he said to him (Par. 27).
```

Closely allied to the Agentive is the Instrumental case. One example of it occurs in the Parable, in which it is formed by the postposition ni:--

ao lemaji odasta-ni marā gam, I am dying here of hunger (Par. 17).

The Dative case has been already dealt with in connexion with the termination asi. As just stated, it is also formed with the help of the postposition na. Thus:—

le-na arī, said to him (Par. 21).

This dative form is also (as in other languages) employed to make a definite accusative, as in:—

lema-ma breda jāmā-na anā, bring ye for him the good garment (Par. 22).

Formation of the Plural.—The plural is often the same as the singular. This is especially the case when a noun ends in a or \bar{a} , but there are also other cases:—

mala, fathers (sing. mala) (L. 106); $kuz^a ra$, horses (sing. $kuz^a ra$) (L. 140); $san\tilde{a}$, dogs (sing. $san\tilde{a}$) (L. 148).

panā, in pade-manzum panā tṣiyā, put ye a shoe (or shoes) on his foot (or feet), may be either singular or plural (Par. 22).

 $os\bar{e}$, deer (sing. $os\bar{e}$) (L. 155).

az bröke störe (sing. störe) tīna, to-day there are many stars (L. 64).

myāna thāna-manzum brōk bradē strē (sing. strē) tīna, in my house there are many good women (L. 130).

lema-ma lā rūpai (sing. rūpai) achhito, take those rupees from him (L. 235).

le ādam tānu māl (sing. māl) tsarā ti, that man is grazing his cattle (L. 229).

 $d\bar{e}$, daughters (sing. $d\bar{e}$) (L. 115). $d\bar{e}n$, cows (sing. $d\bar{e}n$) (L. 145). $g\bar{o}$, bulls (sing. $g\bar{o}$) (L. 144).

le myāna dē panzī sansar (sing. sansar) tē, this my daughter is fifteen years (old) (L. 111).

lema $K\bar{a}bula$ -manzum sawe barê (sing. $bar\hat{e}$) $\underline{kh}ar\hat{a}ba$ $t\bar{\imath}na$, in Kābul all mares are bad (L. 141).

Sometimes a is added to form the plural. Thus:—

ek adamas do putara (sing. putar) wāna, a certain man had two sons (Par. 11).

chāna mala thāna-manzum katisi put ra tīna, how many sons are there in thy father's house (L. 223)?

le ād^ama (sing. ād^am) <u>kh</u>arāb tīna, those men are bad (L. 29). Cf. ād^amo, below. tā tre ād^ama hokhyār tiza, you three men are clever (L. 23).

brada adama (sing. adam) lema khār-manzum brok tīna, there are many good men in this town (L. 124).

Sometimes the plural ends in e or \bar{e} . This is especially a feminine ending, but it may also be masculine. Thus:—

 $t\underline{s}\bar{a}l\bar{e}$ (sing. $\underline{t}\underline{s}\bar{a}l\bar{i}$), she-goats (L. 152).

chāna sanās dante (sing. dant) brok trighna tīna, the teeth of thy dog are very sharp (L. 146).

The word wrani is plural, but I do not know the singular. It occurs in prēgī wrani tsarai, sent (him) to feed (?) sheep. I presume that the word means 'sheep,' and that it has been used, in order to avoid giving offence by using the word for 'swine.' Compare the Ormurī wrai, a sheep. In Paṣḥtō, the same word means 'lamb.'

The plural ends in o in mēn samo tre ād"mo khārasi da bazam, we three men all go to the town (L. 17). Compare, however, $\bar{a}d$ "ma, above. In $muzdur\bar{a}no$, servants (Par. 17), o has been added to a Paṣḥtō or Persian plural. In two other words a is similarly added instead of o. These are $u\underline{k}h\bar{a}na$ (sing. $\bar{u}\underline{k}h$), camels, and $mar\underline{g}h\bar{a}na$ (sing. $mar\underline{g}h$), birds. With $u\underline{k}h\bar{a}na$, compare the Paṣḥtō $u\underline{k}h\bar{a}n$, oblique $u\underline{k}h\bar{a}n\bar{o}$.

The Oblique Plural ends in an. Thus:—

brada adaman thana sūra tīna, the houses of the good men are small (L. 125). sawa brada adaman le khabar dē-o, give the news to all good men (L. 126).

wranin khō, (?) the food of the sheep (Par. 16). Here the meaning of khō is doubtful. Regarding the meaning of wrani, see above.

sawa brijan-ma le brij kaza ti, that is the highest of all towers (L. 137).

In the following the oblique plural ends in $\bar{\imath}$, apparently a singular form – chāna māl-maṭā strīz $\bar{\imath}$ (sing. nom. strīza) <u>kh</u>um chi kere, he wasted thy substance on females (Par. 30).

Sometimes we find an oblique plural ending, as in Persian in $\bar{a}n$. Thus:—

gaņa putar <u>ts</u>akalān-manzum wā, the elder son was in the fields (Par. 25).

sawa thanan-ma chana than brada ti, thy house is the best of all houses (L. 134).

It ends in āna in tānu dostānu sama, with my friends (Par. 29).

At other times we have the Pashtō oblique plural in $\bar{a}n\bar{o}$. Thus: —

tānu mazdūrāno-<u>kh</u>um mē sama karē, make me equal among thy servants (Par. 19). Compare the nominative plural mazdurāno (Par. 17) mentioned above.

In the following we have $-g\bar{a}na$, which may be compared with the Paṣḥtō $-g\bar{a}n\bar{o}:$ —

lētik sansaragāna chāna khidmat au da karem, for so many years I am doing thy service (Par. 29).

In this connexion also may be mentioned the irregular noun $d\bar{e}$, a daughter, which has dun for its oblique plural, as well as for its oblique singular (L. 116-118). Thus, $my\bar{a}na$ dun umar, the age of my daughters (L. 116). As already stated, it seems probable that dun is properly only plural, and, that when used for the singular, it is simply an instance of carelessness.

On the other hand, the singular is often used instead of the plural, as in:—
domāma āwāz, the sound of drums (Par. 26).

tema tre bad na (plural) malasi (plural) <u>kh</u>abar ut ti, information has come from the fathers of these three children (L. 109).

pade-manzum (sing. nom. padī) panā tsiyā, put ye shoes (or a shoe) on his feet (or foot) (Par. 22).

The use of the singular form *malasi* for the plural ablative is further illustrated by the following examples, in which the singular termination *asi* reappears as *si* added to the plural oblique case:—

dunsi, to or from daughters (L. 117-8).

le adam tānu tsakalānsi prēgī, that man sent (him) to his fields (Par. 15).

brada adamansi khabar ut ti, news has come from good men (L. 127).

mala tānu naukarānosi arī, the father said to his servants (Par. 22). In this example, the termination si has been added to a borrowed Paṣḥtō form.

Subject to the foregoing remarks, the following paradigms may be quoted from the Standard List of Words and Sentences (Nos. 101-9, 119-127, 110-8):—

	Singular.	Plural.		
Nom.	mula, a father.	mala.		
Gen.	malas	málu.		
Dat.	mulasi	mlpha!asi .		
$\Lambda bl.$	mala- ma	malasi.		

	Singular.	Plural.		
\mathbf{Nom} .	brada adam, a good man	br a da adama.		
Gen.	brada adamas	brada adaman.		
Dat.	brada adamasi	brada adaman.		
Abl.	brada adama-ma	brada adamansi.		
Nom.	$d ilde{e}$, a daughter	dē.		
Gen.	$dar{e}$	dun.		
Dat.	$dar{e}si$	dunsi.		
Abl.	dunsi (? plural).	dun si .		

Other relations of time or place are indicated with the aid of postpositions. Of these, the following have been noted:—

bogha, near, governing the dative, as in:-

khā thānasi bōgha ō, when he came near the house (Par. 25).

 $b\bar{a}hr$, outside, governing the ablative, as in:—

ao chāna hukum-ma bāhr nā gim, I did not go outside (i.e., disobey) thy command (Par. 29).

 $dap\bar{a}ra$, for the sake of, borrowed from Paṣḥtō, and governing the general oblique case, as in :—

te lema dapāra breda batsa kukhto, for his sake thou slaughteredst the good calf (Par. 30).

khum. The general meaning of this seems to be 'on', but there are other derivative meanings. It governs the general oblique case:—

le zīn kuz ra dāk khum thā, put the saddle on the horse's back (L. 227).

lema ad mas put r khum mē brok ditina kere tīna, I have made many stripes on that man's son (L. 228).

le ādam tāna māl brekhta khāra khum tsarā ti, that man is grazing his cattle on the top of the hill (L. 229)

le ādam kuzīra dāka khum spāra ga, that man is mounted on a horse's back (L. 230).

chāna māl-maṭā strīzī khum chi kere, wasted thy property on females (Par. 30).

ao az gana ponda khum gā wāma, I went on a long way to-day (L. 224).

lē gaņa put r ghussā khum gā, the elder son became on anger (i.e., became angry) (Par. 28).

le adum dāma khum tare, bind that man with a rope (L. 236).

mē suro wāma lema wakta khum, at that time I was small (L. 162).

le adam dür wa galiz wakta khum, that man was away at the time of theft (L. 164).

tānu mazdūrāno khum mē sama karē, make me like (one) among thy servants (Par. 19).

kharē, near, with, governing the general oblique case, as in:-

të mëkhu më kharë wë, thou wast always with me (Par. 31).

 $l\bar{a}$ <u>kh</u>are natī $g\bar{a}$ (Par. 15) appears to mean 'took refuge near him,' but is doubtful.

ma is usually a postposition of the ablative. It is added to the general oblique case. Thus:—

an lema kursi-ma uthum, I stand up from this chair (L. 82).

mala·ma, from a father (L. 104).

brada adama-ma khabar ut ti, news has come from a good man (L. 122).

lema-ma lā rūpai achhito, take those rupees from him (L. 235).

kui-ma uwa prēla, draw water from the well (L. 227).

lema-ma lā brok brade wa, from this (i.e., because) he was very well (Par. 27).

We have ablatives of comparison in:

myāna-ma chāna thān braḍa ti, thy house is better than mine (L. 133). sawa thānān-ma chāna thān braḍa ti, thy house is better than all houses (L. 134).

sawa brijan-ma le brij kaza ti, this tower is higher than all towers (L. 137).

This postposition is occasionally found with other meanings, as in:—

lema-ma breda jāmā-na anā, bring ye for him the good garment (Par. 22).

lema-ma khabar yā ti, of (i.e., concerning) him it is said (L. 27).

Sometimes it appears to be used to form a genitive, as in :-

te-ma, of thee (L. 21); $t\bar{a}$ -ma, of you (L. 24).

lema-ma kram kharāb ti, their business is bad (L. 31). It is, however, impossible to be certain about the first two without any context, and the last sentence perhaps means 'owing to them the business is bad'.

manzum, in, with other derived meanings. It is used with the general oblique case. Thus:—

le mulke-manzum brök grānī wē, a great famine happened in that land (Par. 14).

le ure-manzum le <u>kh</u>iyāl wa, in his heart there was this thought (Par. 16). So lā tānu ōre-manzum arī, he said in his heart (Par. 17).

chāna nazar-(or nazaram-) manzum gunugār bēm, I am a sinner in thy sight (Par. 18, 21).

az myāna thāna-manzum ek dēn m^i ra $g\bar{a}$ tē, to-day a cow has died in my house (L. S3).

myāna thāna-manzum brōk brade strē tīna, there are many good women in my house (L. 130).

lema Jaba-manzum sawa kuz^ara bradē tīna, in Jaba all the horses are good (L. 140).

lema Kābula-manzum sawe baṣē kharāba tīna, in Kābul all the mares are bad (L. 141).

chāna mala thāna-manzum katisi put^ara tīna, how many sons are there in thy father's house? (L. 223).

le parána kuz'ras zīn myāna thāna-manzum, in my house (is) the saddle of the white horse (L. 226).

le san gaṇa put^ar <u>ts</u>akalān-manzum wā, his eldest son was in the fields (Par. 25).

lema asto-manzum angur tsiya, pade-manzum panā tsiya, put ye a ring on his hand, put ye shoes on his feet (Par. 22).

to suro waz jango wakta-manzum, thou wast small at the time of fighting (L. 163).

lema-manzum sure, the younger from among them (Par. 12).

myāna māla-manzum ki hissa owē, from in the property the share which comes as mine (Par. 12).

pas, after, is used both as a preposition and as a postposition. When used as a preposition, it governs the ablative case, as in pas diyan-ma, after beating (L. 178). When used as a postposition, it governs the general oblique case, as in tsuk" daze pas, after a few days (Par. 13).

pati, after, governs the general oblique case, as in:

lema patī mala tarafe \tilde{u} , after that he came towards the father (Par. 20).

patikana, behind, governs the genitive in:

chāna patīkana kāmik badāna da ē, whose boy comes behind thee? (L. 239).

sama, with, together with, governs the dative in:

ki tānu dostāna sama khushālī kere, that I made merry with my friends (Par. 29),

It gives the force of a dative in :-

mē sama (or masi) munāsib, proper for me (Par. 19, 21).

It seems to mean 'equal to' in:—

tānu mazdūrāno khum mē sama karē, make me equal to thy servants (Par. 19).

tona, under, probably governs the general oblique case, as in brichat tona, under a tree (L. 230).

waza, under, may be used in the above sentence instead of tona (L. 230).

Nouns Adjective.

Adjectives appear sometimes to change for gender and number, but the available materials are not sufficient for laying down any general rules. All that can now be said is that the termination e or \tilde{e} occurs most frequently in the case of adjective agreeing with feminiae nouns or with masculine plural nouns. But this is by no means a universal rule. For this reason, it is best to give here simply a list of all the adjectives noted, with the context in which they occur.

odasta, hungry, in lā brōk odasta gā, he became very hungry (Par. 14). brada or breda, good. Used attributively in :-

le breda ād'm ti, he is a good man (L. 26).

breda jāmā-na anā, bring ye the good garment (Par. 22).

breda batsa, the good calf (Par. 23, 27, 30).

Judging from L. 119-127, when this word is used attributively, it does not change in masculine declension.

For the feminine singular, we have brada strē, a good woman, and for the feminine plural, we have myana thana-manzum brok brade stre tina, in my house there are many good women (L. 130).

```
This word is used predicatively in :-
        chāna thān brada ti, thy house is good (L. 22).
        az surē brada ti, today the sun is bright (L. 62).
        myāna thāna-ma chāna thān brada ti, thy house is better than mine (L. 133, so
             134).
      We have brade or brade, instead of brada, in the following: -
        lā brok brade wa, he was very well (Par. 27).
        diyan brade na ti, it is not good to beat. In both these cases brade is masculine
             singular. It is masculine plural in :-
        lema Jaba-manzum sawa kuzara brade tina, in Jaba all the horses are good (L.
            140).
        lema sawa brade tīna. they are all good (L. 161).
 brok or brok, much, many. Used attributively in :-
       brok grānī (fem.) wē, there was a great famine (Par. 14).
        myāna mala lā sŭrč thāna-manzum brok umar langā ti, my father is living in that
            small house for a long time (L. 233).
       myāna mala brok muzdurāno wāna, there were many servants of my father
            (Par. 17).
       myāna thāna-manzum brok bradē strē tīna, in my house there are many good
            women (L. 130).
     We have broke in :-
       az bröke störe tina, to-day there are many stars (L. 64).
     The word is used adverbially, in the sense of 'very', in :-
       lā brok odasta gā, he became very hungry (Par. 15).
       mē brok gunagar tim, I am very sinful (Par. 21).
       la brok brode wa, he was very well (Par. 27).
       chāna sanās nante brok trigh na tīna, the teeth of thy dog are very sharp (L. 146).
       le adam brok do, beat that man well (L. 236).
bēwukūf, in te bēwukūf tis, thou art a fool (L. 157).
d\bar{u}r, far. Used attributively in :—
       lā be gā dūr mulkasi, and he went to a far country (Par. 13).
     Predicatively in :—
       lã dữr va mala bịchi, he was far, the father saw him (Par. 20).
       le adam dur wa galiz wakta khum, that man was far away at the time of the theft
           (L. 164).
gana, great, long, elder, as in :-
       ao az gaņa panda khum gā wāma, I walked a long way today (L. 224).
       le san gaṇa put<sup>a</sup>r tsakalān-manzum wā, his elder son was in the fields (Par. 25.
       mala gana putrasi jawab dita, the father gave answer to the elder son (Par. 31).
gar, lost, in :—
       le gar gā wa, he had been lost (L. 24. So 32).
hokhyār, clever, in :-
       to hokhyär tis. thou art clever (L. 20).
       tā tre ad ma hokhyār tiza, you three men are clever (L. 23).
```

```
hāzir, present, in:
  mē hāzir gam, I am present (L. 156).
  dēzī hāzir bazam, I shall be present (?) today (L. 173).
  lē sawa hāzir wāma, they were all present (L. 167).
jaltī, speedy, quick, as in :--
  l\bar{a} jalt\bar{i} \bar{u}, he came quickly (i.e., he ran) (Par. 20).
  jaltī bō, go ye quickly (Par. 22).
jinde, living, alive, in :-
  k\bar{a}la jinde g\bar{a}, now he became alive (Par. 24, 32).
kaza, high, tall, as in :—
   lema brijasi le kaza ti, this tower is higher than that (L. 136).
  sawa brijan-ma le brij kaza ti, this tower is higher than all towers (L. 137).
  lemas spazunsi le adamas brā kaza ti, that man's brother is taller than his sister
       (L. 231).
kharāb, bad, attributive, as in :-
  kharāb badani, a bad bov (L. 129).
   ek kharāb kumār, a bad girl (L. 131).
Predicatively in :—
   le \bar{a}d^ama kharāb tīna, those men are bad (L. 29).
   lema-ma-kram kharāb ti, their business is bad (L. 31).
   tao sawa kharābe tiza, you are all bad (L. 160).
   lema Kābula-manzum sawe barē kharāba (fem. pl.) tīna, in Kābul all mares are
       bad (L. 141).
<u>kh</u>ushāl, happy, in urē <u>kh</u>ushāl gā, the heart became happy (Par. 32).
loi, red, in loi zar, red precious metal, i.e., gold (L. 45).
munāsib, proper, as in :—
     mē sama (or masi) munāsib nā ti, it is not proper for me (Par. 19, 21).
     khushālī karan munāsib wa, it was proper to make rejoicing (Par. 32).
parána, white, as in :--
  parana zar, white precious metal, i.e., silver (L. 46).
   le parána kuzaras zīn, the saddle of the white horse (L. 226).
sura, sure, small, younger. Attributively in:
   lema-manzum sure putar mala ditanas, from among them, the younger son said to
       his father (Par. 12).
   tsuka daze pas sure putar tānu māl jama kere, after a few days the younger son
       collected his property (Par. 13).
   myāna mala lā sūrē thāna-manzum brok umar langā ti, my father is living a long
       time in that small house (L. 233).
   le surē (fem.) myāna dē tē, this little one is my daughter (L. 36).
Used predicatively in :—
  lemo than sura ti, his house is small (L 28).
  mē suro [ sic ] wāma lema wakta khum, at that time I was small (L. 162).
  to suro [sic] waz jango wakta-manzum, at the time of fighting thou wast small
        (L. 163).
  It will be observed that in the predicative examples, the final vowel is a or o,
       not \check{e}.
```

```
lā saw māl chiz kere, he wasted all his substance (Par. 14).
  lema Jaba-manzum sawa kuz<sup>a</sup>ra bradē tīna, in Jaba all horses are good (L. 140).
  sawa brada adaman le khabar de-o, give the news to all good men (L. 126).
  sawa thānān-ma chāna thān brada ti, thy house is better than all houses (L. 134).
  sawa brijan-ma le brij kaza ti, this tower is higher than all towers (L. 137).
  lema Kābula-manzum sawe barē (fem. pl.) kharāba tīna, in Kābul all mares are
      bad (L. 141).
This word is often used to indicate a plural, as in:
  āo sawa aharībāne tima, we (all) are poor (L. 159).
  tao sawa kharabe tiza, you (all) are bad (L. 160).
  lema sawa brade tina, they (all) are good (L. 161).
  tao sawa bōgha wāma, you (all) were near by (L. 166).
  lē sawa hāzir wāma, they (all) were present (L. 167).
trighna, sharp, as in :--
  châna sanās dante brok trighna tīna, the teeth of thy dog are very sharp (L. 146).
tsuk, a few, as in tsuk duze pas, after a few days (Par. 13).
                                  Pronouns.
The pronoun of the First Person appears under the following forms:—
                                                            Plur.
          ao, av, or m\bar{e}, I.
Nom.
                                                       ao, āo, mēn.
Agent.
          тē.
                                                        ao.
Gen.
          myāna,
                                                       myāna.
          masi-da, da mē.
                                                        masī.
          masi, (?) mē sama.
Dat.
                                                          . . .
Obl.
The following are examples of the use of the above forms:—
Singular Nominative.
  ao lemaji odasta-ni marà gam, I am dying here of hunger (Par. 17).
   ao chāna hukum-ma bāhr nā gim, I went not outside thy command (Par. 29).
   ao ditam, I strike (L. 179).
   ao az gaņa panda khum gā wāma, I walked a long way to-day (L. 224).
   ki chāna put'r au dēm, that I may be thy son (Par. 19, 21).
   chāna khidmat au da kerem, I am doing thy service (Par. 29).
   mē tānu malasi bazam, I will go to my father (Par. 18).
  mē āsmān be chāna nazur manzum gunagār bēm, I am a sinner in the sight of
       heaven and of thee (Par. 18. So 21).
   mē hāzir gam, I am present (L. 156).
   mē suro wāma lema wakta khum, at that time I was small (L. 162).
   mē dēma, I am beating (L. 191). mē ba-dēm, I shall beat (L. 195).
Agentive.
   mē dita wa, I struck (L. 184).
   mē te adam diyanasi dita wa, I gave that man for a teating (i.e., to be beaten)
        (L. 177).
```

saw, sawa, all, as in:

lema adamas putar khum mē brok ditina kere tīna, by me many blows have been made on that man's son (L. 228).

Genitive.

wranin khō myāna shpun bē khō, (?) the food of the sheep (is) also the food of me the shepherd. The meaning of this sentence is doubtful (Par. 16. myāna mī-kana bo, walk before me (L. 238).

This myāna is more generally employed as a possessive pronoun. When so used, it does not change for gender, number, or case. Thus:—

le myāna putar mura gā wa, this my son had died (Par. 24).

myāna mala lā sǔrĕ thāna manzum brōk umar langā ti, my father lives for a long time in that small house (L. 234).

le strē myāna khīna tē, this woman is my wife (L. 53).

le suré myana de te, this little girl is my daughter (L. 56).

myāna mal brok mazdurāno wāna, there were many servants of my father (Par. 17).

az myāna thāna-manzum ek dēn mira gā tē, to-day a cow has died in my house (L. 83. So 130, 226).

myāna trōras put^ar le myāna spazam manas ti, the son of my uncle is married to my sister (L. 225).

· myāna dunsi <u>kh</u>at ut ti, a letter has come from my daughter (L. 113). myāna dun umar, the age of my daughters (L. 116).

Used predicatively, we have:—

myāna māla-manzum ki hissa owē, amongst the property the share which comes (as) mine (Par. 12).

kasa myāna wa, whatever was mine (Par. 31).

Sometimes myāna is preceded by the demonstrative pronoun le, without affecting the meaning, as in:—

le myāna dē panzi sansar tē, my daughter is fifteen years (old), (L. 111). So le myāna spazam given above. But compare le myāna put'r, this my son (Par. 24).

Note that in myāna spazam, already twice quoted, not only is myāna prefixed to the noun, but the pronominal suffix am appears also to be added to the end of the noun. This, however is the only example of this pronominal suffix, if it really is such. The whole phrase is myāna spazam manas ti, and the final m of spazam may possibly be explained as a doubling of the following m in manas, as is the case in nazaram-manzum explained on p. 269 ante.

Sometimes the Paṣḥtō preposition da, of, is used to form the genitive of this pronoun. The only examples are in L. 15, where we have masi-da or da $m\tilde{e}$ given as equivalent to 'of me'.

Dative.

```
lā masi dē, give that to me (Par. 12).

tē masi tsālī tsindar nā dita, thou didst not give to me a goat's kid (Par. 29).

masi (or mē-sama) munāsib nā ti, it is not proper for me (Par. 19, 21).
```

```
Oblique.
```

mē-sama munāsib, as above.

da mē, of me, as above.

tē mēkha mē kharē wē, thou wast always with me (Par. 31).

Plural Nominative.

ao dē kām (? khām) khushālī karēm, let us eat, let us make rejoicing (Par. 23). pas diyan-ma ao gēma, after beating we went away (L. 178).

āo sawa <u>gh</u>arībāne tima, we are all poor (L 159). Similarly, āo sawa wāma, we all were (L. 165); ao ditama, we beat (L. 182); ao ba dēma, we shall beat (L. 198); ao gā wāma, we go (? went) (L. 208).

mën samo tre $\bar{a}d^a$ mo $\underline{kh}\bar{a}rasi\ da\ bazam$, we three men all go to the town (L 17). Agentive.

ao mi-kana dita wāma, we struck formerly (L. 188).

Genitive.

The only authorities for masi and myāna, the genitives plural, are those in L. 18, 19.

I have no information as to the dative and oblique plurals of this pronoun. The pronoun of the **Second Person** appears under the following forms:—

	Sing.	Plur.
Nom.	tu, to, te, tē, thou.	tu, tao, tā
$\Lambda { m gent.}$	$te, tar{e}.$	$tar{a}.$
Gen.	chāna, (verily thine) chānam,	chāna.
	te-ma.	$tar{a}$ - ma .
Dat.	•••	•••
Obl.	te, t ë ,	tā.

The following are examples of the use of the above forms:—Singular Nominative.

tu de gā wāza, thou goest (? wentest) (L. 206).

to hokhyār tis, thou art clever (L. 20).

to suro wāz jango wakta khum, at the time of fighting thou wast small (L. 163).

te bēwukūf tis, thou art foolish (L. 157).

te ditama, thou strikest (L. 182).

te ba dēm, thou wilt strike (L. 197).

të mëkha më kharë wë, thou wast ever with me (Par. 31).

Agentive.

te lema dapāra breda batsa kukhto, thou slaughteredst for him the good calf (Par. 30).

te dita wa, thou struckest (L. 186).

te le bānu kāma adamasi achita ti, from whom have you bought that? (L. 240).

tē masi <u>ts</u>ālī <u>ts</u>indar nā dita, thou didst not give to me a she-goat's kid (Par. 29). Genitive.

chāna patī-kāna kāmik badána da ē, whose boy comes at the back of thee (i. e. behind thee) (L. 239).

This chāna is more often employed as a possessive pronoun. When so used, it does not change for gender, number, or case. Thus:—

chāna put"r au dēm, (it is not proper that) I should be thy son (Par. 19, 21).
vol I, Part I.

```
chāna brā ŭ ti, thy brother is come (Par. 27).

chāna khidmat au da kerem, I am doing thy service (Par. 29).

chāna lā put'r ō, this thy son came (Par. 30).

chāna māl-maṭa strīzī khum chi kere, wasted thy substance on females (Par. 30).

chāna brā muṇa gā wa, thy brother had died (Par. 32).

chāna thān braḍa ti, thy house is good (L. 22).

chāna nām ki ti, what is thy name (L. 220).

chāna mala lā breḍa baṭsa kukhto, by thy father the good calf was slaughtered (Par. 27).

chāna sanās dante brōk trighna tīna, the teeth of thy dog are very sharp (L. 146).

chāna kuz ra umar katēsi ti, how much is the age of thy horse (L. 221)?

chāna nazar (or nazaram)-manzum gunagār bēm, in thy sight I am a sinner (Par. 18, 21).

chāna mala thāno-manzum, in thy father's house (L. 223).

ao chāna hukum-ma bāhr nā gim, I did not go outside thy command (Par. 29).
```

kasa myāna wa, lā chānam ti, whatever was mine, that is thine verily (=Urdū tērā-hī) (Par. 31).

The ablative seems also to be used with the force of the genitive, as in te-mu, of

The ablative seems also to be used with the force of the genitive, as in te-mu, of thee (L. 21), $t\bar{a}$ -ma, of you (L. 24). There are, however, no examples of these forms. See the remarks above (p. 275 ante) in connexion with the postposition ma.

Plural Nominative.

```
tu de gā wāza, you go (? you went) (L. 209).

tao sawa kharābe tiza, you are all bad (L. 160).

tao sawa bōgha wāma, you were all near by (L. 166).

tā tre ād ma hokhyār tiza, you three men are clever (L. 23).

tā ditama, you beat (L. 183); tā ba dēma, you will beat (Par. 199).

Agentive.

tā mī-kana dita wa, formerly you struck (L. 189).
```

The List of Words gives $ch\bar{a}na$ as meaning 'your' as well as 'thy', (L. 25), and (L. 24) gives $t\bar{a}$ -ma, an ablative form, for 'of you', corresponding to the te-ma of the singular. But, as in the case of the singular, there are no examples of the use of these forms.

From the above accounts of these two pronouns, we gather that the oblique forms and the direct forms are often confused, one being used instead of the other, and that the singular forms are commonly used as plurals. The true division of the forms seems to be as follows:—

	Sing.		Plur.	
	Direct.	Oblique.	Direct.	Oblique.
First person.	ao, au.	$m ilde{e}.$? ao.	mēn.
Second person.	tu, to.	te, tē.	tao.	$t ilde{a}$.

The **Demonstrative Pronoun** is le, $l\bar{a}$, or lema, this, that, he. Judging from the available examples, there do not appear to be separate words for 'this' and for 'that', though we might expect that le was used for the one, and $l\bar{a}$ for the other. In the examples, lema is not used for the nominative singular, and seems to be used only in the

oblique cases of the singular and generally in the plural. Le or $l\tilde{a}$ is also used where we should employ the definite article, and is also found prefixed to possessive pronouns and to place-names, where we should omit any demonstrative pronoun. The pronoun is used both as a pronoun and as a pronominal adjective, without distinction of form. The following are the forms found in the examples:—

```
Singular.
                                                              Plural.
         Nom. le, lā, this, that, he.
                                                            le, lā, lema.
         Agent. le, la, le-na.
                                                            le, lān.
          Acc.
                  le, lā, lās.
                                                            lā.
         Gen.
                  le, (?) le sān, lā, lema, lemo, lemas.
                                                            lema-ma.
                  le, lesi, lāsi, lūs, le-na, lemas.
         Dat.
         Obl.
                 le, lā, lema.
                                                            lema.
The following are examples of the use of these forms:—
Singular Nominative.
  ure-manzum le khiyāl wa, in the heart was this thought (Par. 15).
  te le bana kama adamasi achita ti, from what man was that (?)thing bought by
       thee (L. 240)?
  le strê myāna khāna tē, this woman is my wife (L. 53).
  le k\bar{i} g\bar{a} ti, what is this that has happened (Par. 26)?
  le breda \bar{a}d^a m ti, he is a good man (L. 26).
  le gar gā wa, he had been lost (Par. 24).
  le bēwukūf ti, he is foolish (L. 158).
  le dita ti, he beats (L. 181); le ba dem, he will beat (L. 197); le gi wa. he goes
       (? he went) (L. 207).
  chāna lā put<sup>a</sup>r ō, this thy son came (Par. 30).
  kasa myāna wa, lā chānam ti, whatever was mine, that is thine verily (Par. 31).
  lã bē gā dūr mulkasi, and he went to a far country (Par. 13).
  lā brōk odasta gā, he became very hungry (Par. 14).
  ek ad ma lā khare natī gā, he (?) took refuge near a man (Par. 15).
  la\ d\bar{u}r\ wa . . . l\bar{a}\ jalt\bar{\imath}\ \bar{u}, he was distant . . . he came quickly (Par. 20).
  lema-ma lā brok brada wa, because he was very well (Par. 27).
Agentive.
  le malasi jawāb dita, by him answer was given to the father (Par. 29).
  le mi-kana dita wa, formerly he struck (L. 187).
  lā māla taksīm kere, by him division of the property was made (Par. 12).
  lā saw māl chiz kere, by him all the property was wasted (Par. 14).
  lā tānu ōre-manzum arī, by him it was said in his heart (Par. 17).
  le-na lāsi arī, by him it was said to him (Par. 27).
```

Accusative.

le khat malasi dem, I give this letter to a father (L. 103). le rūpai le adamasi dē, give this rupee to him (L. 234). le panu, clothe ye him (Par. 22). $l\bar{a}$ masi $d\bar{e}$, give that to me (Par. 12).

lās kukhto, slaughter it (Par. 23). Here the dative (like the Hindostānī us-kō) is used as a definite accusative.

Genitive.

le ure-manzum le khiyāl wa, in his heart this thought was (Par. 16).

le $ad^a mas \ br\bar{a}$, the brother of that man (L. 231).

lā azi (fem.) achhite, took his mouth, i e., kissed him (Par. 20).

le sān gaņa put r tsakalān-manzum wā, his elder son was in the fields (Par. 25). The translation of le sān by 'his' is very doubtful. This is the only passage where the form occurs, and there are no analogies.

lema asto-manzum angur tsiya, put ye a ring on his hand (Par. 22).

lemo than sura ti, his house is small (L. 27).

lemas spazunsi le adomas brā kaza ti, that man's brother is taller than his sister (L. 231).

lemas shisi dowadī rūpai kimat ti, the price of that thing is two and a half rupees (L. 232).

Note that in the two instances in which we have *lemas*, that word is, in each case, followed by a word beginning with s. It is possible that the final s of *lemas* is merely a doubling of the s that follows, like the m in nazaram, and that t in brichat, to which attention is drawn on p. 269 ante.

Dative

le rupai le adamasi de, give this rupee to that man (L. 234).

lesi bo aram, I will say to him (Par. 18).

lāsi kī nā dita, no one gave to him (Par. 16).

lās pu<u>kh</u>lā kere, made conciliation to him (Par. 28). Compare the remarks above about lās used as a definite accusative.

le-na lāsi ari, by him to him it was said (Par. 27).

putre-na le-na arī by the son to him it was said (Par. 21). Regarding the form le-na,—here a dative, and in the preceding passage an agentive,—see the remarks about na on p. 271 ante.

lemas <u>tsir</u> kere, asked to (i.e., from) him (Par. 26). Oblique.

le mulke-manzum brök gränī (fem) wē, in that country there became a great famine (Par. 14). So le mulke-manzum in Par. 15.

le pakirasi ek ana dē, give one anna to the faqir (L. 84).

lā pore, after that (Par. 14).

lā sūrē thāna-manzum, in that small house (L. 233).

au lema kursi-ma uthum, I rise from this chair (L. 82).

lema jaisi Kashmīr katési dūr ti, how far is Kashmīr from this place (L. 222)?

lema brijasi le kaza ti, this tower is higher than that (L. 136).

lema patī mala tarafe ū, after that he came in the direction of the father (Par. 20).

lema-ma breda jāmā-na anā, bring ye for him the good garment (Par. 22).

lema-ma lā rūpai achhito, take those rupees from him (L. 235).

lema-ma khabar gā ti, of (i. e., concerning) him it is said (L. 27).

lema-ma, from this, also='because'. Thus, lema-ma lā brok brade wa, because he was very well (Par. 27).

te lema dapāra breda batsa kukhto, thou for his sake slaughteredst the good calf (Par. 30).

Plural Nominative.

leādama kharāb tīna, those men are bad (L. 29).

le ditama, they beat (L. 184); le ba dêma, they will beat (L. 200).

le sawa hazir wama, they were all present (L. 167).

lema sawa brade tina, they are all good (L. 161).

Agentive.

le mi-kana dita wama, formerly they struck (L. 190).

tānu <u>kh</u>ushālī lān kere, by them their own rejoicing was made, i. e., they made their rejoicing (Par. 24).

Accusative.

lema-ma lā rūpai achhito, take those rupees from him (L. 235).

Genitive

lema tre badana malasi <u>kh</u>abar ut ti, information has come from the fathers of these three children (L. 109).

lema-ma kram <u>kh</u>arāb ti, their business is bad (L. 31). This is doubtful. See the remarks on p. 275 ante.

Oblique.

lema-manzum săre putar mala aitanas, from among them the younger son said to the father (Par. 12).

The following are examples of the use of this pronoun as a definite article:—

le pakirasi ek āna dē, give one anna to the faqīr (L. 84).

le parána kuzaras zīn, the saddle of the white horse (L. 226).

le zīn kuz ra dāk khum thā, put the saddle on the horse's back (L. 227).

le kila ek banyā-ma achhita ti, I have bought (it) from a shopkeeper of the village (L. 241).

chāna mala lā breda ba<u>ts</u>a ku<u>kh</u>to, thy father slaughtered the good calf (Par. 27). lā gaņa put^ar <u>ah</u>ussā <u>kh</u>um gā, the elder son became in anger (Par. 28).

The words le adam, that man, are often used to mean simply 'he'. Thus:—

le adam tānu tsakalānsi prēgī, he sent (him) to his fields (Par. 15).

le adam dür wa galiz wakta khum, he was away at the time of theft (L. 164).

mē le adam diyonasi dita wa, I gave that man (or him) to be beaten (L. 177).

le ādam tāna māl tsarā ti, he is grazing his cattle (L. 229).

le ādam kuz^ara dāka <u>kh</u>um spāra gā, he is sitting on a horse's back (L. 230).

le adam brok do, beat him well (L. 236).

le ad mas brā, his brother (L. 231).

le rūpai le adamasi dē, give that rupee to him (L. 234).

tema ad^amas put^er <u>kh</u>um mē brok ditina kere tīna, I have made many stripes on his son (L. 225).

le $\bar{a}d^ama$ <u>kh</u>arāb tīna, they are bad (L. 29).

The following are examples of this pronoun prefixed to a possessive pronoun:—

trative pronoun has its proper force, but in the following it does not require representation in English:—

le myana de panzi sansar te, my daughter is fifteen years (old) (L. 110).

myāna trōras put^ar le myāna spazam manas ti, the son of my uncle is married to my sister (L. 225).

Somewhat similarly this pronoun is prefixed to place-names, as in:-

lema Jaba-manzum sawa kuz ra brade tīna, in Jaba all horses are good (L. 140).

lema Kābula-manzum sawe baŗē <u>kh</u>arāba tīna, in Kābul all mares are bad (L. 141).

The Reflexive Possessive Pronoun is $t\bar{a}nn$, own, which, like the Hindostani $apn\bar{a}$, always refers to the logical subject of the sentence. It does not seem to change for gender, number, or case, unless the form $t\bar{a}na$, which occurs once (L. 229), is a plural in agreement with a plural noun ($m\bar{a}l$ =cattle). The following are examples of its use:— $m\hat{e}$ $t\bar{a}na$ malasi bazam, I will go to my father (Par. 18).

ki tānu dostāna sama khushālī kere, that I (might have) made rejoicing with my friends (Par. 29).

tānu mazdūrāno <u>kh</u>um mē sama karē, make me equal among thy servants (Par. 19).

sure put r tānu māl jama kere tānu mālas badmāshī khum chi kere, the younger son collected his property wasted his property in debauchery (Par. 13).

ek tānu naukaris ga ti, he has gone to one of his servants (Par. 26).

lā tānu ōre-manzum aṛī, he said in his heart (Par. 17).

mala tānu naukarānosi arī, the father said to his servants (Par. 22).

le adam tānu tsakalānsi prēgī, that man sent (him) to his fields (Par. 15).

tānu khushālī lān kere, they made their rejoicing (Par. 24).

le ādam tāna māl brēkhta khāra khum tsarā ti, that man is grazing his cattle on the top of the hill (L. 229). Here, as above remarked, tāna is perhaps plural, in agreement with māl.

The **Relative Pronoun** is ki, who, which, as in:—

chāna lā put^ar ō, ki chāna māl-maṭā strīzī khum chi kere, this thy son came, who wasted thy substance on females (Par. 30).

myāna māla-manzum ki hissa owē, amongst the property the share which comes as mine (Par. 12).

The Interrogative Pronoun is $k\bar{a}ma$, who; the genitive of which is $k\bar{a}mik$, whose? The neuter is ki, what? The following are examples of this pronoun:—

le adam kāma ti, who is that man (L. 92)?

te le bana kama adamasi achhita ti, from what man didst thou buy that (F) thing (L. 240).

chāna patī-kana kāmik badána da ē, whose boy comes behind thee (L. 239)?

le ki ti, what is this (L. 93)?

chāna nām ki ti, what is thy name (L. 220)?

le kī gā ti, what (is) this (that) has happened (Par. 26)?

ki sawab ti, what cause is it? i.e., why? (L. 94).

The Indefinite Pronouns are kī, anyone, and kasa, whatever. Thus:—

lāsi kī nā dita, anyone did not give to him (Par. 16). Here it will be observed that kī is in the Agentive case.

kasa myana wa, lā chānam ti, whatever was mine, that is verily thine (Par. 31).

TIRĀHĪ. 287'

Other **Pronominal Adjectives** are *lētik*, so many; *katēsi*, how much \hat{z} ; and *katisi*, how many \hat{z} . Thus:—

lētik sansaragāna chāna khidmat au da kerem, for so many years I am doing thy service (Par. 29).

chāna kuzīra umar katēsi, how much is the age of thy horse (L. 221)?

lema jaisi Kashmīr katēsi dūr ti, from this place how much distant is Kashmīr (L. 222):

chāna mala thāna-manzum katisi put ra tīna, how many sons are there in thy father's house (L. 223):

CONJUGATION.

Auxiliary Verbs and Verbs Substantive.—In the present tense, the most common verb substantive is tim, I am. It is conjugated as follows:—

	Sing.	Plur.
1.	tim, I am.	tima.
2.	tis.	tiza.
3.	ti ; fem. $tar{e}$.	$t\bar{\imath}na.$

Examples of its use are :-

```
brök gunagār tim, I am a great sinner (Par. 21). In the corresponding passage in verse 18, we have bēm (see below) instead of tim.
```

to hokhyār tis, thou art clever (L. 20).

te bēwukūf tis, thou art a fool (L. 157).

munāsib nā ti, it is not proper (Par. 19, 21).

le breda $\bar{a}d^a m$ ti, he is a good man (L. 26).

lemo than sura ti, his house is small (L. 28).

lema-ma kram kharāb ti, their business is bad (L. 31).

kasa myāna wa, lē chānam ti, whatever was mine, that is thine verily (Par. 31).

az surē brada ti, to-day the sun is bright (L. 62).

le bad na myāna putr ti, this child is my son (L. 54).

chāna nām ki ti, what is thy name (L. 220)?

chāna kuz ra umar katési ti, how much is the age of thy horse (L. 221)?

lema jaisi Kashmīr katési dūr ti, how far is Kashmir from here (L. 222)?

lemas spazunsi le ad mas brā kaza ti, his brother is taller than his sister (L 231).

lemas shisi dowadī rūpai kimat ti, the price of that thing is two rupees and a half (L. 232).

Possession is indicated in :-

le than malas ti, this house belongs to the father (L. 102).

For the feminine, we have :—

cha strē tē, there is one woman (L. 52).

le strē myāna khīna tē, that woman is my wife (L. 53).

le suré myana de te, this little one (fem.) is my daughter (L. 56)

le myána de panzi sansar te, my daughter is fifteen years (old) (L. 111).

For the plural, we have:—

ão sawa gharībāna tima, we are all poor (L. 159).

tā tre ādama hokhyār tiza, you three men are all clever (L. 23).

tao sawa kharābe tiza, you are all bad (L. 160).

le ādama kharāb tīna, those men are bad (L. 29).

az bróke störe tina, to-day there are many stars (L. 64).

myāna thāna-manzum brōk bradē strē tīna, in my house there are many good women (L. 130).

lema sawa brade tina, they are all good (L. 161).

chāna mala thāna-manzum katisi put"ra tīna, how many sons are there in thy father's house (L. 223)?

The above are all examples of the use of this verb as a verb substantive. It is also commonly used as an auxiliary verb, helping to form the present definite or the perfect tense. Examples of these uses will be found under the head of these tenses.

The corresponding past tense of the verb substantive is conjugated as follows:—

	Sing.	Plur.
1.	wāma, I was.	$war{a}ma$.
2.	$war{a}z,war{e}.$	$war{a}m{m}u$.
3.	$war{a}~(wa)$; fem. $war{e}$.	wāna, w ā ma.

With the above we may compare the Paṣḥtō wu, he was. It will be noticed that the form $w\bar{a}ma$ may be used for any person of the plural. I suspect that this properly belongs to the first person, and that custom allows it to be used optionally for either of the other two persons. It seems also to be likely that the $w\bar{a}z$ of the second person singular, is really a second person plural (compare tiza, you are, of the present), and that the original plural forms are therefore (1) $w\bar{a}ma$, (2) $w\bar{a}z$ (or $w\bar{a}za$), and (3) $w\bar{a}na$. This would bring the conjugation of this tense into line with the present. It is quite common in the languages of this part of the world for the second person singular to be confounded with the second person plural. The following are examples of this tense used as a verb substantive:—

```
me suro wāma lema wakta khum, at that time I was small (L. 162).
```

to suro wāz jango wakta-manzum, at the time of fighting thou wast small (L. 163).

të mëkha më kharë wë, thou wast ever with me (Par. 31).

le adam dūr wa galiz wakta khum, that man was away at the time of theft (L. 164). Similarly Par. 20.

le ure-manzum le khiyāl wa, this thought was in his heart (Par. 16).

le sān gaṇa put"r <u>ts</u>akalān-manzum wā, his elder son was in the fields (Par. 25).

lema-ma lā brok brade wa, because he was very well (Par. 27).

andarun gāwa ure na wā, the heart was not for going (i.e., he did not wish to go) inside (Par. 28).

kasa myāna wa, lā chānam ti, whatever was mine, that is thine verily (Par. 31). khushālī karan munāsib wa, it was proper to make rejoicing (Par. 32).

le mulke-manzum brôk grânī wē, there was (i.e., became) a great famine (fem.) in that land (Par. 14).

```
āo sawa wāma, we all were (L. 165).
```

tao sawa bōgha wāma, you were all near by (L. 166).

ek ad mas do put ra wāna, of a certain man there were two sons (Par. 11).

myāna mala brok mazdurāno wāna, of my father there were many servants (Par. 17).

le sawa hāzir wāma, they were all present (L. 167).

According to L. 202, 'I am beaten' is translated by mē dita wāma. Perhaps this really means 'I was beaten'.

The above are all examples of the use of this tense as a verb substantive. It is also freely used as an auxiliary verb. See below.

There is in Paṣḥtō another verb substantive, dai, he is, which appears in Tirāhī under the form $d\bar{e}$ (de) or da. It is almost always employed as an auxiliary verb forming the present tense, and will be fully considered under that head. In Par. 19 and 21, however, there is a word $d\bar{e}m$, which seems to be the first person singular of this verb, and to mean 'I may be', being distinct from $d\bar{e}m$, I give, or I beat. The words are the same in both passages. They are $mun\bar{a}sib$ $n\bar{a}$ ti ki chāna put'r au dēm, it is not proper that I may be thy son.

The irregular verb bo-, go (bazam, I go; $g\bar{a}$, went), is frequently used as a verb substantive. It is fully discussed under the head of the Active Verb. Here I may quote the one example available of its use in the first person singular present:—

chāna nazar-manzum gunahgār bēm, I am a sinner in thy sight (Par. 18). In the corresponding passage in verse 21, tim is used in place of bēm. The two words are therefore convertible in meaning.

Active Verb. Verbal Nouns.—There is a verbal noun ending in n. Thus:—

khushālī karan munāsib wa, it was proper to do rejoicing (Par. 32).

diyan brade na ti, it is not good to beat (L. 176).

As examples of oblique cases singular of this verbal noun, we have: -

mē le adam diyanasi dita wa, I gave that man for a beating (i.e., to be beaten) (L. 177).

pas diyan-ma ao gêma, after beating we went away (L. 178).

For the plural, we have:—

mē brok ditina kere tīna, many beatings were made by me (i.e., I gave many stripes) (L. 228). Another oblique verbal noun, forming an infinitive of purpose, ends in ai, as in prēgī wrani tsarai, sent him to graze sheep (Par. 15). In Par. 28, andarun gāwa ure na wā, gāwa appears to be used as a kind of verbal noun or infinitive, 'his heart was not for going (i.e., he did not wish to go) inside'.

Imperative.—The second person singular of the Imperative may have the form of the bare root, as in:—

lā masi dē, give that to me (Par. 12).

le pakīrasi ek āna dē, give one anna to the fagir (1.84).

brada adamasi le khat de, give this letter to a good man (L. 121).

le rupei le adamasi de, give this rupee to him (L. 234).

bo, be! (L. 168).

```
jaltī bō, go quickly (Par. 22). This perhaps is a plural.

myāna mī-kana bo, go (i.e., walk) before me (L. 238).

le zīn kuz"ra dāk khum thā. put the saddle on the horse's back (L. 227).
```

It often ends in a, as in utha, stand up (L. S2); mira, die (L. S4); giya, run (S5). So:—

kui-ma vwa į rēla, draw water from the well (L. 237).

Sometimes it ends in o, as in :—

lema-ma lā rūpai achhito, take those rupees from him (L. 235).

bicho, behold! (Par. 29).

le adam brok do, beat him well (L. 236).

sawa brada adaman le khabar dê-o, give this news to all good men (L. 126).

In one instance it ends in e, viz., in:—

dāma khum tare, bind with a rope (L. 236).

In the forms $\tilde{e}za$, come (L. 80); diz (L. 81) or daz (L. 175), give, beat; and $b\tilde{e}za$, sit (L. 79) the letter z forms part of the verbal base, and is not a part of the personal termination. This will be explained under the head of the present tense.

The second person plural appears generally to end in a or \bar{a} , as in:

breda jāmā-na anā, bring ye the good coat (Par. 22).

lema asto-manzum angur <u>ts</u>iya, pade-manzum panā <u>ts</u>iya, put ye a ring on his hand, put ye shoes on his feet (Par. 22).

But sometimes we have u or o, as in :—

le pānu, elothe ye him (Par. 22).

ek breda batsa ānines, lās kukhto, bring ye for him a good calf, slaughter ye it (Par. 23). In ānines, in this sentence, we have two pronominal suffixes, viz. -in, it (accusative), and -es, for him, so that the full word ānines means 'bring-ye-it-for-him.'

It will be observed that the above terminations are also used in the singular. Indeed, in some cases it is difficult to decide whether the word is singular or plural. This is entirely in accord with the declension of substantives (*ante*, p. 272), in which little heed is paid to the distinction of number, so long as this is plain from the context.

Present.—As in the other Dardic languages, and as in the Ghalchah languages, the present tense is also used for the future, though there are at the same time special forms for the latter tense. If present or future time has to be emphasized, this is done by prefixing the verb substantive $d\bar{e}$ or da, he is, for the present, and ba (as in Paṣḥtō) for the future. This, however, is not always done. The forms given for the present in the List of Words and Sentences are as follows:—

Sing.	$_{ m Plur}$
1. ditam.	ditama.
2. ditama.	dita ma .
3. dita ti.	ditama.

I doubt, however, if these are really present forms. They look to me more like forms of the past (or, in the third person singular, of the perfect) tense of the root $d\hat{e}$, beat, of which the past participle is dita. Sir Aurel Stein's informant was quite illiterate,

and Sir Aurel Stein tells me himself that he had difficulties with him in regard to the isolated tense forms, so that it is permissible to assume that the informant could not be prevented from misunderstanding the forms put to him for translation into his own language. Before leaving the above paradigm attention may be called to the fact that all the three persons of the plural are the same in form. We have observed the same state of affairs in the past tense of the verb substantive.

The following forms of the present occur elsewhere: --

au az thānasi ēma, I come to the house to-day (L. 80).

au lema kursi-ma uthum, I stand up from this chair (L. 82).

mē āsmān be chāna nazar-manzum gunagār bēm, I am a sinner in heaven's and thy sight (Par. 18).

bēzum, I sit (L. 79).

munāsib nā ti ki chāna put rau dēm, it is not proper that I may be thy son (Par. 19).

le khat malasi dem, I give this letter to a father (L. 103).

dēm, I beat (L. 82); dēma, I am beating (L. 191). It is evident that the illiterate informant was unable to distinguish between a present and a present definite.

ki hissa owē, the share which comes (Par. 12).

So far we have examples of the simple present. The following are examples in which present time is defined with the help of $d\bar{e}$ (de) or da:—

chāna patī-kana kāmik badána da ē, whose boy comes behind you (L. 239)?

. ao dē kām (? khām) <u>kh</u>ushalī karēm, let us eat, let us make rejoicing (Par. 23). Here we have the present used as a present subjunctive or imperative.

lētik sansaragāna chāna khidmat au da karēm, for so many years I am doing thy service (Par. 29).

au da bazam, I go (L. 77).

mēn samo tre ādimo khārasi da bazam, we three men all go to town (L. 17).

The last two examples draw attention to the fact that, at least in the case of some verbs, a present base is formed by the addition of the letter z, and that the same base is also used for the imperative. Thus:—

From the root bo-, become, be, go, we have baz-am, as above.

From the root be-, sit, we have bez-um, I sit (L. 79).

From the root \bar{e} -, come, we have $\bar{e}z$ -a, come thou; and also $\bar{e}ma$, I come (L. 80).

From the root $d\bar{e}$, give, beat, we have diz (L. 81) or daz (L. 175), beat thou, and also $d\bar{e}m$, I beat (L. 81).

If we remember that the letters z and j are often interchanged, we shall recognize this same verbal present base in Shinā, in which language also the present and the future have the same form, and in which also the root bu- means both 'become' and 'go'. In Shinā the present-future of this verb runs as follows:—

\$	Sing.	Plur.
1.	bujam, I go.	$bujar{o}n.$
2.	bujè.	$buoldsymbol{j} yar{a}t.$
3.	bujè.	bujèn.

From the above examples, we get the following forms of the Tirāhī present:—

1. ēma, I come; dēma, I give, I beat.

uthum, I stand up; bēm, I become, I go;

bēzum, I sit; dēm, I give, I beat.

da kerem, I do, da bazam, I go.

dē kām (? khām), let us

eat; dē karēm, let us

make; da bazam, we

go.

2. ... 3. *owē*, he comes ; *da ē*, he comes. ...

It will be observed that, although this paradigm is very incomplete, the forms are mutually very consistent, and that they differ widely from those given in the paradigm taken from the List of Words and Sentences. Perhaps the forms $\bar{e}ma$ and $d\bar{e}ma$, which end in a, are really plurals, and the forms $d\bar{e}$ $k\bar{a}m$, $d\bar{e}$ $kar\bar{e}m$, and da bazam, which do not end in a, are really singulars.

Present Definite.—The Present Definite is formed with the aid of the verb substantive. The following examples occur, but only one is certain:—

myāna mala lā sūrē thāna-mauzum brok umar langā ti, my father is living for a long time in that small house (L. 233). Here possibly we should read lan gā ti, in which gā ti is a perfect, meaning 'has been'.

myāna trēras put^ar le myāna spazam manas ti, the son of my uncle is married to my sister (L. 225). This also is very doubtful.

le ādam tāna māl tsarā ti, that man is grazing his cattle (L. 229).

As explained above, the form dita ti (L. 181), though given as a present, is probably a perfect.

Future.—As already explained, the future is the same in form as the present, although, when emphasis is laid on the futurity, the syllable ba or bo is prefixed, as in Poshto. The List of Words (195-200) gives the following paradigm:—

	Sing.	Plur.
1.	ba d ēm.	ba dēma.
2.	ba dēm.	ba dēma.
3.	ba děm.	ba dēma.

It will be observed that in the above no distinction of person exists. It is probable that this is only an instance of the carelessness already observed in the case of the past of the verb substantive and of the present. It is probable,—indeed, I may say that it is certain,—that any other form of the present may also be used preceded by ba. The following examples of this tense are found elsewhere:—

mēn tānu malasi bazam, lesi bo aram, I will go to my father, I will say to him (Par. 18). Here there is no prefixed to bazam, but there is ho prefixed to aram.

dēzī hāzir bazum, (?) today I shall be present (L. 173). The translation of dēzī in this sentence by 'today' is a mere guess. Here again the ba is not prefixed.

Past.—As in other Dardic languages, the past tense is formed from the past participle, to which pronominal suffixes may or may not be added. It must be considered under two aspects, viz., (a) the past tense of intransitive verbs, and (b) the past tense of transitive verbs.

(a) Intransitive Verbs.—The past participle of the verb bo-, go, is $g\bar{a}$, gone. When used as a past tense, $g\bar{a}$ means 'he went', but also, as in other Dardie languages, is used to mean 'he became', and hence 'he is'.

The only other intransitive verb occurring in the Parable is the verb \tilde{e} -, come, of which the past participle is \tilde{u} or \tilde{o} .

The following are examples of the use of these two past participles as past tenses:—
ao marā gam, I went (or became) dead, I am dead (Par. 17).

mē hāzir gam, I am present (L. 156).

ao chāna hukum-ma bāhr nā gim, I did not go outside thy order (Par. 29). From these examples we gather that for 'I went' we may have either gam or gim. The vowel is probably an indeterminate sound like the fatḥa-ĕ-afghānā of Pashtō.

For the third person singular, we have :-

lā bē gā dūr mulkusi, and he went to a far country (Par. 13).

lā brok odasta gā, he became very hungry (Par. 14).

lē gaņa put'r ghussā khum gā, the elder son went on anger (i. e., he became angry) (Par. 28).

kāla jinda gā, now he became alive (Par. 24, 32).

uṛē khushāl gā, the heart became joyful (Par. 32).

le ādam kuz'rā dāka khum spāra ga, he is riding on a horse's back (L. 230).

For \tilde{u} or \tilde{o} we have :—

lema patī mala tarafe \bar{u} , after that he came towards the father (Par. 20).

lā jaltī ū, he came quickly (Par. 20).

 $k\bar{a}la$ \bar{u} , he is now come (Par. 24).

<u>khā</u> thā nasi bō <u>gha</u> ō, gidān na <u>gh</u>ā ra domā ma ā wā z ū, when he came near the house, the sound of singing, music, (and) drum came (Par. 25).

chāna lā pul"r ō, this thy son came (Par. 30).

For the first person plural, we have :-

pas diyan-ma ao géma, after beating (him) we went away (L. 178).

- (b) Transitive Verbs.—As usual, these are construed as passives, with the subject in the Agentive case. Thus:
 - mē brok ditina kere tīna, by me many blows have been made (i.e., I struck many blows) (L. 228). This is really an example of the perfect, but is given here as a specimen with a plural object.
 - ki tānu dostāna samu khushāli kere, that (I might) have made rejoicing with my friends (Par. 29).
 - tē masi tsālī tsindar nā dita, thou didst not give to me a goat's kid (Par. 29).
 - te lema dapara breda batsa kukhto, by thee, for his sake, the good calf was slaughtered (Par. 30).

lā azī (fem.) achhite, his mouth was taken (i.e. (he) kissed him) (Par. 20). arī, he said (Par. 17, 22).

putre-na le-na arī, the son said to him (Par. 21).

le-na lāsi arī, he said to him (Par. 27).

lā dūr wa, mala bīchī, he was distant, the father saw (him) (Par. 20).

lāsi kī nā dita, no one gave to him (Par. 16).

le malasi jawāb dita, he gave answer to the father (Par. 29).

chāna mala lā breḍa batsa kukhto, thy father slaughtered the good calf (Par. 27). lā māla taksām kere, he made division of the property (Par. 12).

sure put^ar tānu mālas jama kere, the younger son collected his property (Par. 13).

lā tānu mālas badmāshī khum chi (or chiz) kere, he wasted his property in riotous living (Par. 13, 14, 30).

mala rām kere, the father made compassion (Par. 20).

lemas tsīr kere, (he) made enquiry from him (Par. 26).

le adam prēgī wrani tsarai, that man sent (him) to feed sheep (Par. 15).

tānu khushālī lān kere, by them their rejoicing was made (Par. 24).

I am unable to explain with certainty the phrase sure puter mala ditanas, the younger son said to the father (Par. 12). The word dita usually means 'given', but, assuming that it can also mean 'addressed', judging from the analogy of other Dardic languages, we may perhaps explain ditanas as dita-n-as, in which -n- is a pronominal suffix meaning 'by him', and -as as a suffix meaning 'he'. The whole would then be literally 'by the younger son the father was-addressed-by-him-he, which is quite a common idiom in, for instance, Kāshmīrī. We may compare with this word ānines, which is similarly analysed on p. 290.

Perfect.—A perfect is formed by adding the verb substantive tim, etc.. to the past participle. Thus:—

lema adamas putar khum mē brok ditina kere tīna, by me many stripes have been made on that man's son (L. 228).

le kila ek banyā-ma achhita ti, (by me) (it) was bought from a shopkeeper of the village (L. 241).

te le bāna kāma adamasi achhita ti, from whom has that thing been bought by thee (L. 240)?

chāna brā ŭ ti, thy brother has come (Par. 27).

In this it will be observed that the word for 'come' is written u, with a short mark over the u. The same sound is apparently represented elsewhere, by doubling the initial t of ti, and writing ut ti, as has occurred in nazaram-manzum and brichattona as pointed out on p. 269 ante. Thus:—

lema tre badana malasi khabar ut ti, information has come from the fathers of these three children (L. 109).

myöna dunsi khat ut ti, news has come from my daughter (L. 113).

brada adama-ma <u>kh</u>abar ut ti. news has come from a good man (L. 122). So L. 127.

The perfect of bo-, go, is $g\bar{a}$ ti, as in :—

ek tānu naukaris ga ti, he has gone to one of his servants (Par. 26).

The perfect $g\bar{a}$ ti, he has gone, is also used to mean 'it has become', i.e., 'it is happening'. Thus:—

le kī gā ti, what is happening (Par. 26)?

lema-ma khabar gā ti, of him news is happening, i.e., of him it is said (L. 27).

In the following $g\bar{a} t\bar{e}$ (fem.) is used as part of an intensive compound verb :—

az myāna thāna-manzum ek dēn m'ra gā tē, to-day a cow has died in my house (L. 83).

Pluperfect.—Similarly a Pluperfect is formed by adding $w\bar{a}$, the past tense of the verb substantive. In the List of Words (205-209) $g\bar{a}$ wa, etc., are shown as presents, but this is probably a mistake of the informant. Certain examples of this pluperfect are:—

ao az gaņa panda khum gā wāma, I went a long way to-day (L. 224).
le myāna put^ar mura gā wa . . . le gar gā wa, this my son had died . . he had become lost (Par. 24. So 32).

The forms given in the List of Words 295-209 are:—

Sing. Plur.

1. mē gā wāmā.

a**o gā wām**a.

2. tu de gā wāza.

tu de gā wāza.

3. le $g\bar{a}$ wa.

For the second person of both numbers, the List gives tu de $g\bar{a}$ $w\bar{a}za$, and perhaps, in these cases, the pluperfect has been converted into a present by the prefixing of de, a word which we have seen is in other cases employed to form the present tense.

Passive.—The only example of the Passive voice is $m\bar{e}$ dita $w\bar{a}ma$, I am beaten (L. 202)

DARDIC FAMILY.

TIRĀHĪ.

(Sir Aurel Stein, K.C.I.E., 1922.).

VOCABULARY.

The following vocabulary contains all the Tirāhī words occurring in the preceding pages, and also all the words given by Leech in his collection on pages 782ff. of the Journal of the Asiatic Society of Bengal, Volume VII (1838). The latter are spelt as given by Leech. Although there are possibly printer's errors in his list, I have not ventured to correct them.

The order of words is based on the alphabetical order of the consonants, without any regard to the vowels. The latter come into consideration only in cases in which the same consonant or consonants are followed or separated by different vowels. Thus, the different words containing the consonants kn will be found in the succession kan^a , kana, kune. All words beginning with vowels are arranged together at the commencement of the Vocabulary, their mutual order being determined by the consonants. The letter n follows n, and n follows n follows

To each article, when known to me, I have added the related words in other Dardic languages. Without attempting to give the etymology of every word, I have, when it appeared useful to do so, added the original Avesta or Sanskrit word which may be taken as the oldest known form of the particular Tirāhī word under consideration. When a word is borrowed from Paṣḥtō, the fact is also indicated.

The following is a list of the contractions employed to indicate the various languages referred to:—

List of Abbreviations (principally) of Language-names.

Ar = Arabic.Ōr.=Ōrmuṛī. Av = Avesta. P.=Pashai. B = Bashgali.Par. = The Tirāhī version of the Parable of Bal.=Balochi. the Prodigal Son. Bur.=Burushaskī. Phl.=Pahlavi. G.=Gawarbati. Pr.=Prakrit. VOL. I, PART I.

TIRĀHĪ VOCABULARY.

- ai, interj. O!, ai mala, O father (Par. 12, 18, 21); ai putara, O son! (Par. 31).
- ao, au, pers. prop. I; mē, mēn, masi, myāna. For examples of all these forms, see Grammar, pages 279ff. [P. G. K. ā, I; P. mēna, K. mai, my.]
- √ē-, come (L. 80). In the Imperative, the base of this verb is ēza. See Grammar, page 291; au az thānasi ēma, I come to the house to-day (L. 80); ki hissa owē, the share which comes (to me) (Par. 12). kāmik badána da-ē, whose boy comes ? (L. 239).

thănasi bōgha ō, he came near the house (Par. 25); châna lā pul^ar ō, thy this son came (Par. 30); gar gāwa, kāla ō, he was lost, now he came (Par. 32).

 $l\bar{a}$ jalt \bar{i} \bar{u} , he came quickly (Par. 20); mala tarafe \bar{u} , he came towards the father (Par. 20); le gar gāwa, kāla \bar{u} , he was lost, now he came (Par. 24); $\bar{a}w\bar{a}z\ \bar{u}$, the sound came (to him) (Par. 25).

chāna brā ŭ-ti, thy brother has come (Par. 27); <u>kh</u>abar ut-ti, news has come (L. 109, 122, 127); <u>kh</u>at ut-ti, a letter has come (L. 113). [P. $\sqrt{y}\bar{e}$ -, Sh. \sqrt{e} -, Ksh. $\sqrt{y}i$ -, K. au, P. aī-k, came; with $\bar{e}za$, cf. B. $\sqrt{a}\underline{t}s$ - and Skr. $\bar{a}gachchha$ -.] \bar{o} , \bar{u} , see $\sqrt{\bar{e}}$ -.

- achchhe, the eye (L. 35); Leech, achcha. [K. ech, G. itsi-n, Sh. achchi, Ksh. achh; ; Skr. akṣi-, Av. ash.]
- achhita, lē azī achhite, took his mouth (fem.), i. e., kissed him (Par. 20); lema-ma lā rūpai achhito, take those rupees from him (L. 235); te achhita ti, hast thou bought (L. 240); achhita ti, (I) have bought (L. 241). [: cf. P. \sqrt{ac} , bring.]
- ād^am (L. 26) or adam (L. 51); braḍa adam, a good man (L. 119); le breḍa adam ti, he is a good man (L. 26); le adam dur wa, that man was distant (L. 164); le ādam, = he (L. 229, 230), = him (L. 236); le adam prēgī, that man sent (him) (Par. 15).

ek ad ma lā khare natī gā, he (?) took refuge with a man (Par. 15); braḍa adama-ma, from a good man (L. 122).

ek ad^amas do pvt^ara wāna, of a man there were two sons (Par. 11); braḍa adamas thān bōgha (i, the house of a good man is near (L. 120); lemu ad^amas pvt^ar khvm, on the son of that man (L. 228); le ad^amas brā, his brother (L. 231).

brada adamasi le <u>kh</u>at dē, give this letter to the good man (L. 121); le rāpai le adamasi dē, give this rupee to him (L. 234); te kāma adamasi (or adama-ma) achhita ti, from whom have you bought? (L. 240).

tā tre ādama hokhyār tiza, you three men are clever (L. 23); le ādama kharāb tīna, those men are bad (L. 29); do brada adama, two good men (L. 123); brada adama lema khār-manzum brok tīna, there are many good men in this town (L. 124).

 $m\bar{e}n$ samo tre $\bar{a}d^amo$ $\underline{k}\underline{h}\bar{a}rasi$ da bazam, we three men all go to town (L. 17).

brada adaman thana sura tina, the houses of the good men are small (L. 125); sawa brada adaman le <u>kh</u>abar dē-o, give this news to all good men (L. 126).

brada adamansi <u>kh</u>abar ut ti, news has come from the good men (L. 127). [Psht. âdam.]

odasta; lā brōk odasta gā, he became very hungry (Par. 14); ao lemaji odasta-ni marā gam, I here have died (= am dying) from hunger (Par. 17). Cf. udhast, hunger (Leech). [? Cf. B. ot, V. ut, W. avot, hunger.]

ogā, the shoulder (Leech). Psht. ōga.]

ek, one (L. 1); le pakīrasi ek āna dē, give one anna to the faqīr (L. 84); ek ad²mas, of a man (Par. 11); le mulk²-manzum ek ad²ma lā khare natī gā, he (?) took refuge with a man in that country (Par. 15); ek breḍa batsa ānines, bring ye for him a good calf (Par. 23); ek tānu naukaris gā ti, he went to one, his own, servant (Par. 26); ek dēn m²ra gā tē, a cow has died (L. 83); ek kharāb kumār, a bad girl (L. 131); ek banyā-ma, from a shopkeeper (L. 241). Cf. Leech's īk, one.

eka strē tē, there is a woman (L. 52). [Cf. B. ē, ev; W. ī, ek; G. yak; K. Sh. ek; Ksh. akh.]

eko, eleven (L. 10), (Leech iko).

 $u\underline{k}\underline{h}$, pl. $u\underline{k}\underline{h}$ and, a camel (L. 75) (Leech $u\underline{k}\underline{h}$). [Psht. $u\underline{k}\underline{h}$.]

 $a\underline{kh}t$, eight (L. 8). (Leech $a\underline{kh}t$). [Cf. P. $a\underline{kh}t$, asht, and so others.]

akhto, eighteen (Leech). Cf. atāra.

állakh, a side (Leech). [Psht. arkh.]

áma, raw (Leech). [Psht. ōm.]

umar; myāna dun umar, the age of my daughters (L. 116); chāna kuz ra umar katēsi ti, how old is thy horse (L. 221); brōk umar, for a great age (= for a long time) (L. 233). [Psht. umr.]

anā, an egg (Stein). | Cf. Skr. anda-.]

anā, bring ye (Par. 22); ānines, bring ye it for him (Par. 23). [Ksh. \sqrt{an} -.] āna, an anna (L. 84).

andarun, adv. within, to within (Par. 28). [B. ater, W. attar, K. udhriman, G. atran, Kh. andreni, Ksh. andar.]

angur; lema asto manzum angur <u>ts</u>iya, put ye a ring on his hand (Par. 23). [Prs. angushtar, G. angustar.]

√aṛ-; bo aṛam, I will say (Par. 18); lā tānu ōre-manzum aṛī, he said in his heart (Par. 17); putre-na le-na aṛī, the son said to him (Par. 21); mala tānu naukarānosi aṛī, the father said to his servants (Par. 22); le-na lasi aṛī, he said to him (Par. 27). [Cf. Sh. √re-.]

```
ure, ore; le ure-manzum, in his heart (Par. 16); ure khushal ga, the heart
      became joyful (Par. 32); andarun gāwa ure na wā, his heart was not for
      going (i.e., he did not wish to go) inside (Par. 28); lā tānu ōre-manzum arī,
      he said in his heart (Par. 17). [Cf. Psht. zra, B. zare, G. hera, P. harā.]
 urinde, see wrinde.
 dryaz, a cloud (Leech). [Psht. waryadz.]
 osé pl. osé, a male deer (L. 153, 155) (Leech osai). [Psht. ōsai.]
 āsmān, heaven (sg. gen.) (Par. 18, 21). [Psht. āsmān.]
 ast, a hand (L. 32); (Leech hast); asta wrinde, he embraced (Par. 20); lema asto
      manzum angur, (put) a ring on his hand (Par. 22). [ K. hāst; G. hast; P.
      hāst, hās; Kh. host; Skr. hasta-.]
 ut, see \sqrt{\vec{e}}
 ath, flour (Leech). [? Cf. Lnd. ata.]
 √uth-; utha, stand up (impve.) (L. 82); au lema kursi-ma uthum, I rise up from
      this chair (L. 82). [Cf. B. \( \square\) usht-, Ksh. \( \square\) woth-, Skr. utthita-; Saurasēnī
      Prakrit, utthid\bar{o}; but Lnd., etc. \sqrt{\bar{u}th}.]
 atāra, eighteen (L. 10). Leech akhto. [Cf. Lnd. athārā.]
 owē, see \sqrt{\bar{e}}.
 uwā, water (L. 66); uwa (L. 237); Leech wà. [Psht. ōba; B. ōv, W. ao, K. u-k, G.
     a\bar{u}, M. w\bar{\imath}, Sh. wei.
\bar{a}w\bar{a}z, sound, noise (Par. 25). [Psht. \bar{a}w\bar{a}z.]
az, today (L. 62, 64, 80, 224). [Ksh. az.]
azī, the mouth (L. 36); Leech, azī; lā azī achhite, he kissed him (Par. 20). [B.
     azhī; Sh. āzī, aî; M. Gār. āî.]
\bar{e}za, see \sqrt{\bar{e}}.
uz (pl. uzo; f. \underline{tsali}), a he-goat (L. 150, 152). [Psht. wuz.]
úzh gunî, goat's hair (Leech). [Psht. ūzh ahūnē.]
ba or bo, sign of future. See Grammar, p. 292.
bě (L. 95), be, bē, and; āsmān be chāna nazar, of heaven and in thy sight (Par.
     18, 21); do be dāma khum ture, beat and bind with ropes (L. 236); lā bē gā,
     and he went (Par. 13); myāna shpūn bē, (?) of me the shepherd also (Par.
     16). Ksh. biyĕ.
bē, see bě and bian.
\sqrt{b\bar{e}}, sit; the present and imperative base of this verb is b\bar{e}z, as in b\bar{e}za, sit!
     (List 79); bēznm, I sit (L. 79). Cf. Grammar, p. 291. [M. Vbhair, Gar.
     √lai-, Sh. √bē-, Ksh. √běh-, H. √bais-, Skr. upa-vis-.]
biau (L. 11), bhyà (Leech), twenty; biau-dah (L. 11), bhyondà (Leech), thirty;
    biau-eko, thirty-one (L. 11); do-bē, forty (L. 11); do-biau-ek, forty-one (L.
    11); da-biau-dah, fifty (I. 11); da-biau-eko, fifty-one (L. 11): tre-bē sixty
    (L. 11); tre-biau-dah, seventy; tsawor-bē, eighty (L. 11); tsawor-biau-dah,
    ninety (L. 11); panz-bē, one hundred (L. 12). [Sh. bēh, Ksh. wuh, P.
```

wöst, Skr. vimsati-.

bo, sign of the future, in lesi bo aram, I will say to him (Par. 18). See Grammar. p. 292, and cf. ba.

bō (L. 11), bo (Leech), twelve; da biau bo, fifty-two (L. 12).

 \sqrt{bo} - or $b\bar{o}$ -, to become, to go; $jalti\ bo$, go quickly (Par. 22); bo, go! (L. 77), walk! (L. 238).

The present base of this verb is optionally baz-, as in bazam, I will go (Par. 18); au da bazam, I am going (L. 77); mēn samo tre ādamo khārasi da bazam, we three men all go to town (L. 17). Cf. Grammar, p. 291.

bo, be! (L. 168); $b\bar{e}m$, I am (Par. 18); bazam, I may be (L. 172); bazum, I shall be (L. 173).

Cf. $g\bar{a}$.

[Cf. G. bua, he was; Skr. bhūta-. Cf. also Sh. bōiki, to become; bujōiki, to go.]

√bīch-; bīcho, see!, behold! (Par. 29); mala bīchī, the father saw (him) (Par. 20). [Cf. Skr. √vîkṣ-; Cf. also Ksh. √wuch-.]

bhadai, see barē.

ba- $d\bar{e}m$, see $\sqrt{d\hat{e}}$ -.

badmāshī-khum, in riotous living (Par. 13). [Prs. bad-ma'āshī.]

badana, a child; le badana myāna putr ti, that child is my son (L. 54); lema tre badana malasi khabar ut ti, information has come from the fathers of these three children (L. 109); kharāb badani, a bad boy (L. 129); kāmik badana da-ē, whose boy comes? (L. 239).

bōgha (L. 120), (?) bōkh (L. 87), boga (Leech), near; thānasi bōgha ō, he came near the house (Par. 25); braḍa adamas thān bōgha ti, the house of the good man is near (L. 120); tao sawa bōgha wāma, you were all near by (L. 166). [? Cf. Skr. upāka, Ōr. bōī.]

bhùm (Leech), earth. [Skr. bhūmi-, Ksh. būm.]

bāhr, outside; ao chāna hukum-ma bāhr nā gim, I did not go outside thy order (Par. 29). [Psht. bāhir.]

bāla (L. 39), bàl (Leech), hair. [Gâr. bāl, M. bāla, Sh. bālī, Ksh. wāl, Skr. vāla-.]

bùli (Leech), wind. [Cf. Prs. bād, Av. Skr. vāta-.]

bilolec (?) (Leech), a cat. [Ksh. brör", Skr. bidala-.]

bāna, ? a vessel, dish (L. 240). [Ksh. bāna, a vessel.]

bhana (Leech), a plate. [See the preceding.]

banyā-ma, from a shopkeeper (L. 241).

brā (L. 49), bhrà (Leech), a brother; chāna brā ŭ ti, any brother has come (Par. 21); chāna brā mura gāwa, thy brother had died (Par. 32); le-mas spazunsi ie aa^amas brā kaza ti, his brother is taller than his sister (L. 231). [B. brōh, W. brā, G. bliaia, Ksh. boy*, Av. brātar-, Skr. bkrātar-.]

bàr (Leech), fruit. [Psht. bar.]

barē (L. 139), bhadai (Leech), a mare; pl. barē (L. 141). [Cf. Skr. vadabā.]

bìr ù<u>kh</u> (Leech), a he-camel; bîra <u>ts</u>inda (Leech), a he-goat. [Cf. K. birera rouz, Sh. bīrō rōz, a male deer.]

brich (Leech), a tree; le ādam kuz^ara dāka <u>kh</u>um spāra ga brichat tōna, he is sitting on a horse under a tree (L. 230). [Skr. vṛkṣa-.]

brada (L. 132), breda, good. For examples, see Grammar, p. 276.[?]

burod (Leech), a wolf.

brij, a tower; lema brijasi le kaza ti, this tower is higher than that (L. 136); sawa brijan-ma le brij kaza ti, this is the highest tower of all (L. 137). [Psht. bruj.]

brok or (Leech) brokh, many; much; well, very. For examples, see Grammar, p. 277. [? cf. B. biluah, belyuk.]

brekh (Leech), pain. [Psht. brēkh.]

brekhta, a hill; le ādam tāna māl brekhta khāra khum tsarā-ti, he is grazing his cattle on the top of the hill (L. 229).

barsat (Leech), rain. [H. barsat.]

bret (Leech), a moustache. (Psht. brēt.)

bat (Leech), a stone. [B. wott, Lnd. vattā.]

batsa, a calf; ek breda batsa ānines, bring a good (i.e. fatted) calf (Par. 23); chāna mala lā breda batsa kukhto, thy father slaughtered the good calf (Par. 27); te lema da-pāra breda batsa kukhto, thou slaughteredst for his sake the good calf (Par. 30). [Psht. bachai.]

 $b\bar{e}wuk\bar{u}f$, in te $b\bar{e}wuk\bar{u}f$ tis, thou art foolish \tilde{c} . 157). [Prs. $b\bar{e}-wuq\bar{u}f$.]

biyàtai (Leech), scissors. (Psht. biyātī.)

bēza, see √ bē-.

bizo (Leech), midday.

bazam, see \sqrt{bo} -.

chi in chi kere, he wasted (his substance) (Par. 13, 30); chiz kere, he expended (Par. 14).

chāna, see to.

chap (Leech), left (not right). [Prs.]

chiz, see chi.

da (for dō, two, q. v.).

da, of; da mē or masi-da, of me (L. 15); da-pāra, for the sake of, on account of, lema da-pāra breḍa batsa kukhto, for his sake thou slaughteredst the fatted calf (Par. 30). [Psht. da.]

da, dē, apparently an auxiliary verb meaning "is," added to other verbs (like Psht. dai, f. da); au da bazam, I am going (L. 77); chāna khidmat au da kerem, I am doing thy service (Par. 29); tu de gāwāza, thou goest (L. 206); kāmik badána da ē, whose boy comes (L. 239); mēn samo tre ādamo khārasi da bazam, we three men all go to town (L. 17); au dē kām khushālī karēm, let us eat, let us do rejoicing (L. 24); tu de gāwāza, you go (L. 209); au dēm, I may be (Par. 19, 21), is doubtful. [Psht. dai, f. da.]

TIRĂHĪ. 311

√ dē-, give; le pakīrasi ek āna dē, give one anna to the faqīr (L. 84); braḍa adamasi le khat dē, give this letter to a good man (L. 121); le rūpai le adamasi
dē, give this rupee to him (L. 234); lā masi dē, give that to me (Par. 12).

le khat malasi dem, I give this letter to the father (L. 103).

mē le adam diyanasi dita wa, I gave that man to be beaten (L. 177); tē masi tsālī tsindar nā dita, thou didst not give me a kid (Par. 29); lāsi kī nā dita, no one gave to him (Par. 16); le malasi jawāb dita, he gave answer to his father (Par. 29); mala gaņa putrasi jawāb dita, the father gave answer to the elder son (Par. 31).

grē re ditana (Par. 17),? the meaning. ditana may = 'were given;' ditanas, he said (gave) to him ('was-addressed-by-him-he, see Grammar, p. 294.) (Par. 12). [Cf. the next.]

√dē-, beat, strike. The present base of this verb is optionally daz- or diz-, as in diz (L. 81), daz (L. 175), strike (? pl.); le adam brok do, beat that man well (L. 236). Cf. Grammar, p. 291.

dēm, I beat (L. 81); mē dēma, I am striking (L. 191); ao ditam, I strike (L. 179); te ditama, thou strikest (L. 180); te dita ti, he strikes (L. 181); ao ditama, we strike (L. 182); tā ditama, you strike (L. 183); te ditama, they strike (L. 184). Except the first two, these all are probably really in the past tense. See Gr. p. 290.

 $m\bar{e}$ (, te, le) ba-dēm, I (, thou, he) shall (will) strike (L. 195-197); ao (, tā, le) badēma, we (, you, they) shall (will) strike (L. 198-200).

 $m\bar{e}$ (, te, le) dita wa, I (, thou, he) struck (L. 185-187); ao (, ta, le) dita wāma, we (, you, they) struck (L. 188-190).

mē dita wāma, I am struck (L. 202).

ditin, a stripe; le-ma ad^amas put^ar <u>kh</u>um mē brok ditina kere tīna, I have made many stripes on that man's son.

diyan, the act of striking; diyan brade na ti, it is not good to strike (L. 176); pas diyan-ma ao $g\bar{e}ma$, after beating we went away (L. 178); $m\bar{e}$ le adam diyanasi dita wa, I gave that man to be beaten (L. 177).

[In many Dardic languages, the same word is used for both "give" and "beat." Kh. \sqrt{di} -, give, beat; K. \sqrt{de} -, give, \sqrt{ti} -, beat; P. Sh. $\sqrt{d\tilde{e}}$ -, give; Sh. $d\tilde{o}iki$, to beat, (Chilāsī), $\sqrt{d\tilde{e}}$ -, beat; Gār. $\sqrt{d\tilde{a}}$ -, give; M. \sqrt{dai} -(p. p. dit), give; Ksh. \sqrt{di} - (p. p. $dyut^u$), give; Av. Skr. $\sqrt{d\tilde{a}}$ -.]

dē, a daughter (L. 56, 110); le surē myāna dē tē, this little one is my daughter (L. 56); le myāna dē panzī sansar tē, my daughter is fifteen years (of age) (L. 111); dēsi, to a daughter (L. 112); myāna dunsi khat nt tī, news has come from my daughter (L. 113); dō dē, two daughters (L. 114); tre dē, three daughters (L. 115); myāna dun umar, the age of my daughters (L. 116); dunsi, to daughters (L. 117), from daughters (L. 118). [M. dhī, Sh. dī, Gār. dūī, Pr. dhīā, Skr. duhitar-.]

do, see $\sqrt{d\bar{e}}$, beat.

dō, (L. 2), dù (Leech), two; ek adamas do putara wāna, of a certain man there were two sons (Par. 11); dō mala tīna, they are two fathers (L. 105); dō dē, two daughters (L. 114); dō brada adama, two good men (L. 123).

do bē (L. 11), dù bhyù (Leech), forty; do biau ek, forty-one (L. 11); da biau dah, fifty (L. 12); da biau eko, fifty-one (L. 12); da biau bo, fifty-two (L. 12).

[B. W. du, P. G. K. Sh. Gar. M. du, Av. Skr. dvu-.]

dàdi, a beard (Leech). [B. dâri, Ksh. dörā, Skr. dâḍhikā.]

 $d\hat{u}da$, (? $d\hat{u}da$), dust (Leech). [Psht. $d\hat{u}ra$.]

dudh, milk (Leech). [Ksh. dod, Skr. dugdha-.]

dah, ten (Leech), L. 10. [P. dē, G. K. Gār. M. dash, Ksh. dah, Skr. daśan-.]

dhùng, smoke (Leech). [B. $d\bar{u}m$, Ksh. $d^{\bar{u}}h$, Prs. $d\bar{u}$, Psht. $l\bar{v}$, Skr. $dh\bar{u}ma$ -.] dhùng, a needle (Leech).

dāk, the back (L. 43); le zīn kuz ra dāk khum thā, put this saddle on the horse's back (L. 227); le ādam kuz ra dāka khum spāra ga brichat tōna, he is sitting on a horse under that tree (L. 230). [K. dāk; M. dāg, dā. ? cf. Ksh. dak-, a support.]

dàl, a shield (Leech). [Psht. dāl.]

dama (L. 42), damma (Leech), the belly.

dām, a rope; dāma khum tare, bind (him) with ropes (L. 236). [Psht. dām, a snare].

 $d\bar{e}m$, see da, $d\bar{e}$, and $\sqrt{d\bar{e}}$, give.

domāma āwāz (Par. 25), the noise of drums. [Psht. damāma.]

dēn (L. 69, 143), dhen (Leech), a cow; az myāna thāna-manzum ek dēn mⁱra gā tē, today a cow died in my house (L. 83); dēn, cows (L. 145). Cf. gō. [Skr. dhēnu-, a cow. ? cf. K. dōn, Sh. dōnō, a bull.]

dun, see de, a daughter.

dant (L. 37), danda (Leech), a tooth; chāna sanās dante brok trighna tīna, the teeth of your dog are very sharp (L. 146). [B. dutt; W. dat; K. dandoriak; G. dat; P. dand, dant; Gar. Ksh. dand; M. dan; Kh. don; Prs. dandan; Skr. danta-.]

da- $p\bar{a}ra$, see da, of.

dūr (L. 89), dùr (Leech), far; le adam dūr wa galiz wakta khum, that man was away at the time of the theft (L. 164); lā bē gā dūr mulkasi, and he went to a far country (Par. 13); lā dūr wa mala bīchī, he was distant (when) the father saw (him) (Par. 20). [Psht. dūr.]

drig (Leech), long; driga (Leech), tall. [B. drgr, K. drīga, M. līga, Sh. zḥīgō, Ōr. chig, Skr. dīrgha-.]

drīst (Leech), false.

das (Leech), a day; cf. daz.

döst, a friend; ki tānu döstāna sama khushāli kere, that I made rejoicing with my own friends (Par. 29). [Psht. döst.]

dita, see $\sqrt{d\tilde{e}}$, give, and $\sqrt{d\tilde{e}}$, beat.

тікāні. 313

ditana, ditanas, see $\sqrt{d\tilde{e}}$, give.

ditin, see $\sqrt{d\tilde{e}}$, beat.

dowadī, two and a half; lemas shisi dowadī rūpai kimat ti, the price of that is two rupees and a half (L. 232).

diyan, daz, diz, see $\sqrt{d\bar{e}}$, beat.

daz, or (Leech) das, a day; <u>tsuk</u> daze pas, after a few days (Par. 13). [P. dawās, dwās; M. dis; Gār. dōs; Sh. dēs; Ksh. dŏh; Skr. divasa-.]

dēzī, ? today; dēzī hāzir bazum, I shall be present (L. 173). The meaning of this word is very doubtful.

 $g\tilde{a}$, went, became. Apparently used as the past tense of $\sqrt{b\tilde{o}}$, q. v.

In L. 205-209, it is apparently used in a present sense, although the forms are certainly those of a past, or rather of a pluperfect. Thus:— $m\tilde{e}$ $g\tilde{a}$ $w\tilde{a}ma$, I go; tu de $g\tilde{a}$ $w\tilde{a}za$, thou goest; le $g\tilde{a}$ wa, he goes; ao $g\tilde{a}$ $w\tilde{a}ma$, we go; tu de ga $w\tilde{a}za$, you go (? singular). Possibly these are shown as presents by mistake, for we also have ao az gana panda khum $g\tilde{a}$ $w\tilde{a}ma$, I have gone a long way today (L. 224).

Other forms with the meaning of "go" are ao chāna hukum-ma bāhr nā gim, I did not go outside thy order (Par. 29); lā bē gā dūr mulkasi, and he went to a far country (Par. 13); ek tānu naukaris ga (read gā) ti, he has gone to one of his own servants (Par. 26); pas diyan-ma ao gēma, after beating we went away (L. 178). In andarun gāwa ure na wā, his heart was not for going inside (Par. 28), gāwa appears to be used as a verbal noun.

Forms with the meaning of "become" or "be" are:—ao odastani marā gam, I am become dead (i.e. I die) of hunger (Par. 17); mē hāzir gam, I am present (L. 156); lā brōk odasta gā, he became very hungry (Par. 14); lā gaṇa putar ghussa khum gā, that elder son became in anger (Par. 28); urē khushāl gā, the heart became (i.e. is) joyful (Par. 32); kāla jinde gā, now he became (i.e. is) alive (Par. 24, 32).

le kī gā ti, this what is become (Par. 26); lema-ma khadar gā ti, of him the news is become, i.e. of him it is said (L. 27); az myāna thāna-manzum ek dēn m'ra gā tē, today a cow is become dead (i.e. died) in my house (L. 83).

le gar gā wa, he had become lost (Par. 24, 32); le myāna putar (chāna brā) mura gā wa, this my son (thy brother) had become dead (Par. 24, 32).

Doubtful is $nat\bar{\imath}$ ga in ek ad^ama $l\bar{a}$ \underline{kh} are $nat\bar{\imath}$ ga, (?) he took refuge near a man (Par. 15).

[B. go; W. $go\tilde{a}$; G. Gar. $g\bar{a}$; P. $g\bar{\imath}$ -k; Sh. $ga\bar{o}$; Ksh. $g\bar{o}(v)$; Skr. gata-. In Ksh. the verb means both "go" and "become."]

gò, a bull (L. 142); go, a bullock (Leech); brōk gō, many bulls (L. 144). Cf. dēn.

[G. gō, M. gā, P. gō-lang, Sh. (dialect) gōlō, all meaning "bull"; Av. Skr. gav-, gō-, an ox, a cow.]

gad (Leech), mud. [? cf. Psht. gad, blended.]

gadh (Leech), clarified butter [? cf. Psht. ghwari.]

```
gidad (? gidad) (Leech), a jackal. [Psht. gidar.]
gidān; gidān āwāz ū, the sound of singing came (Par. 25). [Cf. Skr. gīta-; cf.
     K. g\tilde{u}ro, P. g\bar{e}, M. g\bar{e}la.
gùgh (Leech), deep. [f Cf. B. guru.]
ghodî (Leech), abuse.
<u>gh</u>ulām, a slave (L. 57). [Psht. <u>gh</u>ulām.]
ghom (Leech), wheat. [Psht. ghanum.]
<u>ahar</u> (Leech), a mountain. [Psht. <u>ahar.</u>]
<u>ahurr</u> (Leech), a bow (the weapon). [Cf. Psht. <u>ahur-kamān</u>, a pellet-bow.]
ghàs (Leech), grass. [Skr. ghāsa-; Ksh. gāsa.]
ahasha (Leech), an arrow. [Psht. ahashai.]
<u>ah</u>ussā, anger; <u>ah</u>ussā <u>kh</u>um gā, he became angry (Par. 28). [Psht. <u>ah</u>ussa.]
ghwar (Leech), good. [Psht. ghwara.]
ghwar kand (Leech), thunder. [Cf. Psht. ghurumb, thunder.]
gul (Leech), a flower. [Psht. gul.]
golai (Leech), a bullet. [Psht. gōlaī.]
galiz, theft; galiz wakta khum, at the time of the theft (L. 164). (Cf. Psht.
     <u>qh</u>al, a thief.)
gana or (Leech) ghana, great, large, tall, elder. no az gana panda khum gā
     wāma, I went a long way today (L. 224); lemas spazunsi le adamas brā
     gaņa ti, his brother is taller than his sister (L. 231); le sān gaņa putar
     tsakalān manzum wā, his elder son was in the fields (Par 25); lā gaņa pular
     ghussā khum gā, that elder son became angry (Par. 28); mala gaņa putrasi
     jawāb dita, the father gave answer to the elder son (Par. 31). [Psht. gan,
     close, dense.
guni, in úzh guni, goat's hair (Leech). (Cf. Psht. ghūndai, a bag made of
     goat's hair.
gunagār; gunagār bēm, I am a sinner (Par. 18); brōk gunagār tim, I am a great
     sinner (Par. 21). [Psht. gunahgār.]
grē, in grē re ditana, ? meaning (Par. 17).
gar, in (le) gar gā wa, he had been lost (Par. 24, 32).
grāni, a famine; le mulke manzum brok grāni wē, a great famine happened in
    that land (Par. 14). [Psht. grānī.]
gushthanî (Leech), a house. Cf. than,
giya, run! (L. 85).
hokhyār, clever; to hokhyār tis, thou art clever (L. 20). [Psht. hokhyār.]
hukum, an order; ao chāna hukum-ma būhr nā gim, I did not go outside thy
    order (Par. 29). [Psht. hukm.]
hindwana (Leech), a water-melon. [Psht. hindwana.]
hissa, a share; myāna māla manzum ki hissa owē, the share in the property which
     comes mine (Par. 12). [Psht. hissa.]
```

TIRĀHĪ. 315

- hast (Leech), a hand. Cf. ast.
- hāzir, present; mē hāzir gam, I am present (L. 156); le sawa hāzir wāma, they were all present (L. 167); dēzī hāzir bazum, (E) today I shall be present (L. 173). [Psht. hāzir.]
- jai, a place; lema jaisi Kashmīr katési dūr ti, how far is Kashmir from this place: (L. 222). [Psht. dzāe.]
- jub, the tongue (L. 41). [Psht. zhiba; W. jip; K. Sh. jib; P. jib, jub; Skr. $jihv\bar{a}$.]
- jalti, quickly; lā jaltī ū, he came quickly (Par. 20); jaltī bō, go quickly (Par. 22). [Psht. jalt, quick.]
- jama; sure put^ar tānu māl jama kere, the younger son collected his property (Par. 13). [Psht. jama'.]
- jāmā, a garment; lema-ma breḍa jāmāna anā, bring for him good garments (Par. 22). [Psht. jāma.]
- jinde, alive; kāla jinde gā, now he is alive (Par. 24, 32). [Psht. zhwandai.]
- jang, fighting; to suro wāz jango wakta manzum, at the time of fighting thou wast small (L. 163). [Psht. jang.]
- jawāb, an answer; le malasi jawāb dita, he gave answer to the (? his) father (Par. 29); mala gaņa putrasi jawāb dita, the father gave answer to the (? his) elder son (Par. 31). [Psht. jawāb.]
- ki, kī, interrog. pron. what? le ki ti, what is that? (L. 93); chāna nām ki ti, what is your name? (L. 220); le kī gā ti, what has happened? (Par. 26); ki sawab ti, why? (L. 94). Cf. kāma. [B. kē, kai; P. kō; G. ki; K. kia; Kh. kya; Ksh. kyāh; Gār. kai; M. gī.]
- ki, rel. pron. who, what; chāna la put^ar ō, ki chāna māl-maṭa strīzī khum chi kere, thy this son came, who wasted thy property on women (Par. 30); myāna māla manzum ki hissa owē, amongst the property, the share which comes to me (Par. 12).
- ki, conj. that; le khiyāl wa ki, this thought was that—(Par. 16); munāsib nā ti ki, it is not proper that (Par. 19, 21); tsālī tsindur nā dita ki tānu dōstāna sama khushālī kere, thou didst not give a kid, in order that I might make rejoicing with my own friends (Par. 29). [Psht. ki.]
- kī, by anyone; lāsi kī nā dita, no one gave to him (Par. 16).

 [anyone, B. Sh. kō, W. ki, P. kī, Kh. kā, Ksh. kāh, M. kaĭ.]
- kui or (Leech) ku,ai, a well; kui-ma uwa prēla, draw water from the well (L. 237). [G. kui, Ksh. (dialect) khūh, Gār. kōi, M. kōh.]
- kuchh (Leech), butter. [Psht. kuch.]
- <u>khā</u>, (?) when; <u>khā</u> thānasi bō <u>ah</u>a o, when he came near the house (Par. 25).
- $\sqrt{kh\bar{a}}$ -; kha, eat! (L. 78); ao $d\bar{e}$ $k\bar{a}m$ (? $kh\bar{a}m$), let us eat (Par. 23). [M. \sqrt{kha} -, Gar. $\sqrt{kh\bar{o}}$ -, Ksh. $\sqrt{kh\bar{i}}$ -, Skr. $\sqrt{kh\bar{a}}d$ -.]
- khō, khō, ? food; wranin khō myāna shpun bē khō, (?) the food of the sheep (is) the food of me the shepherd also (Par. 16).

<u>kh</u>o, card. six (Leech, L. 6). [B. Gār. sho; W. shū; P. sh^a; <u>kh</u>ē; G. M. shoh; K. shōh; Sh. Ksh. shah; Av. <u>kh</u>shvash; Skr. shash-.]

<u>kh</u>abar, news; lema-ma <u>kh</u>abar gā ti, of him it is said (L. 27); lema tre bad na malasi <u>kh</u>abar ut ti, information has come from the father of these three children (L. 109). [Psht. <u>kh</u>abar.]

khod, see khōla.

Khudāi, God (L. 60). [Psht. Khudāe.]

khka (Leech), a horn. [Psht. khkar.]

khōla (L. 10), khod (Leech), card. sixteen.

khum, in, among; with, by means of. For examples, see Grammar, p. 274.

khīna, a wife; le strē myāna khīna tē, this woman is my wife (L. 53). [Psht. khīna, a wife's sister.]

<u>kh</u>ār, a town; mēn samo tre ād^amo <u>kh</u>ārasi da bazam, we three men all go to town (L. 17). [Psht. khahr.]

<u>khār</u>, the head (L. 40); the top of anything; bre<u>kh</u>ta <u>khāra kh</u>um, on the top of a hill (L. 228).

khare, near, with; lā kharē natī ga, (?) took refuge near him (Par. 15); tē mēkha mē-kharē wē, thou wast always with me (Par. 31).

kharāb, bad. For examples, see Grammar, p. 278. [Psht.]

kharg (Leech), the armpit. [Psht. tkharg.]

<u>kh</u>ushāl, joyful; $ur\bar{e}$ <u>kh</u>ushāl $g\bar{a}$, the heart became joyful (Par. 32). [Psht. <u>kh</u>ūsh-ḥāl.]

khushālī, rejoicing; ao dē kām (? khām), khushālī karēm, let us eat, let us do rejoicing (Par. 23); tānu khushālī lān kere, they made their rejoicing (Par. 24); ki tānu dōstāna sama khushālī kere, that I made rejoicing with my own friends (Par. 29); khushālī karan munāsib wā, to do rejoicing was proper (Par. 32). [Psht. khūsh-hālī.]

khat, a letter; le khat malasi dém, I give this letter to the father (L. 103); myāna dunsi khat ut ti, news has come from my daughter (L. 113); brada adamasi le khat dē, give this letter to the good man (L. 121). [Psht. khatt.]

khwai (Leech), right (not left). [Psht. khai.]

khiyāl, thought; le ure manzum le khiyāl wa. this thought was in his heart (Par. 16). [Psht. khiyāl.]

kukhto; lās kukhto, slaughter it (Par. 23); chāna mala lā breda batsa kukhto, thy father hath slaughtered the good calf (Par. 27); te lema da-pāra breda batsa kukhto, thou slaughteredst for him the good calf (Par. 30).

kukri, pl., young dogs, pups (L. 149) [a puppy, Psht. kūtrai; a dog, B. kuri, V. kerukh, Gār, kūchur, M. kūsar, Skr. kukkura-.]

kāla, now (Par. 19, 24 (bis), 32 (bis)). [? cf. Psht. kala, at any time. Cf. Skr. kala-time.)

TIRĀHĪ. 317

kila, a village; le kila ek banyā-ma achhita ti, I bought it from a shopkeeper of this village (L. 241). [Psht. kilai, qil'a.]

 $k\bar{a}m$ (? $kh\bar{a}m$), see $\sqrt{kh\bar{a}}$ -.

kāma, interrog. pron., who?; le adam kāma ti, who is that man (L. 92)?; chāna patīkana kāmik badána da ē, whose boy comes behind you? (L. 239); te le bāna kāma adamasi (or adama-ma) achhita ti, from whom did you buy that? (L. 240). Cf. ki, what? [B. kū; W. kē; P. kē, kiā; G. kara; K. kūra; Kh. kā; Sh. kō; Ksh. kus; Gār. kum; M. kā.]

kamàn (Leech), a bow (the weapon). [Psht. kamān.]

kumār or (Leech) kumàr, a daughter (L. 56); ek kharāb kumār, a bad girl (L. 131). [Kh. kimēri, a woman; kumōru, a girl; Skr. kumārī.]

kimat, price; lemas shisi dowadī rūpai kimat ti, the price of that is two rupees and a half (L. 232). [Psht. qīmat.]

kan^a or (Leech) kan, an ear (L. 38). [M. kān, Gār. kyan; Sh. kūn; Ksh. kan; Av. karena-, Skr. karna-.]

kana, in mīkana, before (L. 90) and patīkana, behind (L. 91); myāna mīkana bo, walk before me (L. 238); chāna patīkana kāmik badána da ē, whose boy comes behind you (L. 239).

kune or (Leech) kunnai, card. nineteen (L. 10).

kand, in ghwar kand, thunder (Leech).

kangana, black (Leech); kangana mirch, black pepper (Leech).

kar (L. 74) or (Leech) khar, an ass. [Psht. khar.]

√kar-, do, make; ki tānu dōstāna sama khushālī kere, that I made rejoicings with my own friends (Par. 29); tānu mālas badmāshī khum chi kere (k²r²), he wasted his substance in riotous living (Par. 13); lā saw māl chiz kere, (when) he had wasted all his substance (Par. 14); ki chāna māl-maṭā strīzī khum chi kere, (thy son) who wasted thy property on women (Par. 30); lā māla taksīm kere, he divided the property (Par. 12); sure put²r tānu māl jama kere, the younger son collected his property (Par. 13); mala rām kere, the father made compassion (Par. 20); tānu khushālī lān kere, they made their rejoicing (Par. 24); lemas tsīr kere, he asked him (Par. 26); lās pukhlā kere, conciliated him (Par. 28).

me brok ditina kere ti, I have made many blows (L. 228).

ao dē kām (? khām) <u>kh</u>ushālī karēm, let us eat, let us make rejoicing (Par. 23).

chāna khidmat au da kerem, I am doing thy service (Par. 29).

<u>kh</u>ushālī karan munāsib wa, it was proper to make rejoicing (Par. 32). [Psht. kr^2l . B. Kh. \sqrt{kor} -, K. \sqrt{kar} -, G. \sqrt{ker} -, P. M. Gār. Ksh. \sqrt{kar} -; Av. \sqrt{kar} -, Skr. \sqrt{kr} -.]

kàrgha (Leech), a crow. [Psht. qārgh.]
kurku mand (Leech), saffron. [? cf. Psht. kūrkamān, turmeric.]

kram, business; lema-ma kram <u>kh</u>arāb ti, their business is bad (L. 31). [Sh. krom, Skr. karman-.]

kursi, a chair; au lema kursi-ma uthum, I rise from this chair (L. 82). [Psht. kursī.]

kasa in kasa myāna wā, lā chānam ti, whatever was mine, that is thine (Par. 31). [B. kai, W. kasu, G. ki.]

kathan (Leech), short.

katari, a razor (Leech); katari, a knife (Leech). [Cf. H. kaṭārī, a dagger.]

katési, how much?; chāna kuz^ara umar katési ti, how old is thy horse? (L. 221); lema jaisi Kashmīr katési dūrti, how far is it from here to Kashmīr? (L. 222). Cf. letik. [G. kata, P. kau, Kh. kamā, Sh. kachāk, Ksh. kūt^a, Gār. kiti.]

katisi, how many?; chāna mala thāna manzum katisi put ra tīna, how many sons are there in thy father's house? (L. 223). Cf. letik. [Cf. above.]

kavza (Leech), a hut.

kaza, high (L. 135), tall; adv. up (L. 80); lema brijasi le kaza ti, this tower is higher than that (L. 136); sawa brijan-ma le brij kaza ti, of all towers that is the highest (L. 137); lemas spazunsi le ad'mas brā kaza ti, his brother is taller than his sister (L. 231).

kuz^ara or (Leech) kuzrà, a horse (L. 68, 138); lema Jaba manzum sawa kuz^ara brade tīna, in Jaba all horses are good (L. 140); chāna kuz^ara umar katḗsi ti, how old is thy horse? (L. 221); le parána kuz^aras zīn myāna thāna manzum, the saddle of the white horse is in my house (L. 226); le zīn kuz^ara dāk khum thā, put the saddle on the horse's back (L. 227): le ādam kuz^ara dāka khum spara gā brichat tōna, he is sitting on a horse under that tree (L. 230). [? Cf. Bur. haghur. Cf. the word barē, a mare.]

lā, lē, le, this, that, he; lēma, lemo, lemas, lān, le-na, lās, lāsi, lesi, le sān. For examples of all these forms, see Grammar, pp. 283-4. [Cf. V. es-le, he, mā, they; P. hla, that, mīs, of this; Kh. hamu, him; Sh. rō, he; K. ele-drūs, they; Māvchī Bhil, ēlō, he.]

loi, in loi zar (Leech, luhi zar), gold (L. 45); see luhi.

ladà (Leech), wood. [Psht. largai.]

luhī (Leech), red. [Skr. lohita-.]

lakai (Leech), a tail. (Psht. lakai.)

lemaji, here; ao lemaji odasteni majā gam, I am dying here of hunger (Par. 17). Cf. lema jaisi, s.v.lā (L. 222).

lon (Leech) salt. [P. lon; Ksh. lawan, lun; Skr. lavana-.]

langā ti, he lives, dwells; myāna mala lā sǔrĕ thāna manzum brōk umar langā ti, my father has dwelt for a long time in that small house (L. 233). [Perhaps we should read lan gā ti.]

TIRĀHĪ. 319

```
lētik, so many; lētik sansaragāna chāna khidmat au da kerem, for so many years I
     am doing thy service (Par. 29). Cf. katési, katisi. [With lē-tik, cf. le, and B.

- thān, a house (L. 67); chāna thān braḍa ti, thy house is good (L. 22); lemo thān sura ti, his house is small (L. 28); le thān malas ti, this is the house of the father (L. 102); braḍa adamas thān bōgha ti, the house of a good man is near (L. 120);
 - thăna; myāna thāna manzum brōk bradē strē tīna, there are many good women in my house (L. 130); chāna mala thāna manzum, in thy father's house (L. 223); myāna thāna manzum, in my house (L. 226); myāna thāna-ma chāna thān brada ti, thy house is better than mine (L. 133).
 - thānasi; khā thānasi bōgha ō, when he came near the house (Par. 25); au az thānasi ēma, I come to the house to-day (L. 80);
 - thānān; sawa thānān-ma chāna thān braḍa ti, thy house is better than all houses (L. 134).
 - [Psht., Lnd. than, a cattle-stall; Skr. sthana-.]
- tekai (Leech), a scabbard. [Psht. tēkai.]
- tuksīm, partition; lā māla taksīm kere, he divided the property (Par. 12). (Psht. taqsīm.)
- tānu, own (=Hindi apnā). For examples, see Grammar, p. 286.
 - [W. G. tanu, Gar. tanī, own; P. tanik, Kh. tan, M. ta, Sh, tomo, Ksh. pana, self; Skr. atman-, self.]
- tona, under; le ādam kuz ra dāka khum spāra ga brichat tona, he is seated on a horse under a tree (L. 230).
- tandr (Leech), a thunderbolt. [Psht. tandar.]

tandrai (Leech), a mouse.

tre, trà, three (L 3); tre $d\bar{e}$, three daughters (L. 115); tre $b\bar{e}$, sixty (L. 12); tre biau dah, seventy (L. 12).

[B. K. treh, W. trē, Sh. chēi, P. hlē, G. <u>th</u>lē, Kh. troi, Ksh. tr^ah.] tre (Leech), salt.

tro, thirteen (L. 10; so Leech).

 \sqrt{tar} ; tare, bind thou; $d\bar{a}ma$ $\underline{kh}um$ tare, bind (him) with a rope (L. 236). [Psht. tar^al .]

taraf, direction; mala tarafe \tilde{u} , he came in the direction of his father (Par. 20). [Psht. taraf.]

tri<u>gh</u>na, sharp; chāna sanās dante brōk tri<u>gh</u>na tīna, your dog's teeth are very sharp (L. 146). [Cf. Psht. trīkh, bitter; but Skr. tīkshņa-, sharp.]

trikht (Leech), bitter. [Psht. trīkh.]

trör, an uncle; myāna trōras put^ar, the son of my uncle (L. 225). [Cf. Psht. trōr, an aunt; but trah, an uncle. Possibly there is a mistake in the original.]

tarwali (Leech), a sword. [Cf. H. talwār, tarwār; Psht. tūra.]

tattà (Leech), hot. [H. tāt; cf. Psht. tōd.]

tsabar (Leech), cloth [: misprint for teadur; cf. Psht. tsādar.]

tsauda, fourteen (L. 10). Leech, tsondà.

tsuk (Leech), little; tsuk daze pas, after a few days (Par. 13). [Cf. Psht. tso.]

<u>tsakal</u> (?), a field; le sān gaņa put^ar <u>ts</u>akalān manzum wā, his eldest son was in the fields (Par. 25); le adam tānu <u>ts</u>akalānsi prēgī, that man sent (him) to his fields (Par. 15).

tsukzara, but (L. 96).

<u>ts</u>ālī, a she-goat (L. 151); pl. <u>ts</u>ālē (L. 152); <u>ts</u>ālī-<u>ts</u>indar, a kid (Par. 29); strizy tsàlī (Leech), a she-goat. [Cf. Psht. chēlai, Gār. chēl, M. sāil.]

tsimbar (Leech tsimbar), iron (L. 44). [Bur. chomar.]

<u>tsinda</u>, a kid (L. 151); ef. <u>tsālī-ts</u>indar, s. v. <u>tsālī</u>; bīra tsinda (Leech), a hegoat. [? Cf. B. chō, W. chū.]

tsondà (Leech), see tsauda:

tsindar, see tsālī and tsinda.

tsanzuwā, a cock (the bird) (L. 72).

√ tsar-, graze (cattle); le adam prēgī wrani tsarai, that man sent him to feed sheep (Par. 15); le ādam tāna (? tānu) māl brekhta khāra khum tsarā ti, he is grazing his cattle on the top of the hill (L. 229). [Psht. tsarawal, to graze; W. K. Gār. Sh. √char-, Ksh. √tsār-, M. √sār-, Av. Skr. √char-.]

<u>tsir</u>, asking; lemas tsir kere, he asked (Par. 26).

tsor (Leech), four, see tsower.

tsat (Leech), the back. TCf. Psht. tsat, the nape of the neck.

TIRĀHĪ. 327

<u>tsawor</u>, four (Leech tsor) (L. 4); <u>tsawor</u> bē, eighty (L. 12); <u>tsawor</u> biau dah, ninety (L. 12).

[B. shto, W. shtā, P. Sh. chār, G. chūr, Kh. Gar. chōr, Ksh. tsōr, M. saūr, K. chau, Av. chathwārō, Skr. chatur.]

<u>ts</u>iya, put ye; lema asto manzum angur <u>ts</u>iya, pade manzum panā <u>ts</u>iya, put ye a ring on his hand, put ye shoes on his feet (Par. 22).

[Cf. G. antsau, put ye.]

wā, wā, he was, we, wāma, wāna, wāz, wāza. For examples of all these forms, see Grammar, pp. 288 and 295.

[Cf. Psht. wu, he was.]

wà (Leech), water. See uwā.

wakt; mē suro wāma lema wakta khum, I was small at that time (L. 162); to suro wāz jango wakta manzum, at the time of fighting thou wast small (L. 163); le adam dūr wa galiz wakta khum, that man was away at the time of theft (L. 164). [Psht. waqt.]

wāmu, see wa.

wrani, sheep; prēgī wrani <u>ts</u>arai, sent (him) to feed sheep (Par. 15); wranin <u>kh</u>ō, : the tood of the sheep (Par. 16).

[Cf. Psht. wrai, a lamb; Or. wrai, a sheep.]

wrinde or urinde, in asta wrinde (urinde), ? he embraced (Par. 20).

waza, adv. down (L. 88); postpos. under, brichat waza, under a tree (L. 230). wāz, wāza, see wa.

yaya (Leech), a bear (the animal). [Cf. Psht. yaq, a bear, yaqa, a she-bear. Possibly Leech's yaya is a misprint.]

zabza/ù (Leech), an earthquake. (Psht. zalzala. Possibly Leech's word is a misprint.)

zhibba (Leech), the tongue. [Psht. zhiba.]

zam (in bazam), see \sqrt{bo} .

zemīndār, a cultivator (L. 58). [Psht.]

zmarrai (Leech), a tiger. [Psht. zmarai.]

zīn, a saddle; le parána kuz^aras zīn myāna thāna manzum, the sadčle of the white horse (is) in my house (L. 226); le zīn kuz^ara dāk <u>kh</u>um thā, put the saddle on the horse's back (L. 227). [Psht. zīn.]

zav (Leech), barley. [Cf. H. jau; Skr. yavn-.]

zyad (Leech), yellow; brass. (Cf. Psht. ziyar, with both meanings.)

GILGITĪ SHIŅĀ.

Although the account of Shinā given in the pages of the Survey was only published in 1919, it had been prepared several years previously. It was based on materials which, while they were the best available at the time, were not always accurate or complete. During the interval that elapsed between its preparation and its publication no further materials came within my reach, but since then the language has been made the object of serious and detailed study by Lieutenant-Colonel D. L. R. Lorimer, C.I.E., who was Political Agent at Gilgit from 1920 to 1924. To him I owe a heavy debt of gratitude for a quantity of material (including a complete grammar) which he has from time to time most kindly sent me. These necessitated such heavy corrections in the pages of the Survey devoted to Gilgitī Shinā, that I have thought it best to rewrite the whole section as follows. In these pages, the numerous examples have been taken bodily from Colonel Lorimer's grammar, and I would here express my thanks for his permission to utilize them in this manner:—

I. **PRONUNCIATION.**—Colonel Lorimer wrote his Ṣḥiṇā words according to the system of spelling introduced by the International Phonetic Association. This is far more accurate than the somewhat rough and ready system followed in the Survey, and takes account of minute differences of sound which hitherto I have not attempted to distinguish. For the sake of uniformity, I have transliterated his Ṣḥiṇā words into the Survey system, and in so doing, I have more than once been compelled to represent two different letters of his transcription by one letter in mine². If, in doing this, some of my spellings are inaccurate, it will be understood that the fault is mine, not his. With this understanding I proceed to explain the pronunciation of Ṣḥiṇā.

Besides the usual pairs of vowels, a (the sound of which fluctuates between that of the a in 'America', and that of the u in 'but') and \bar{a} , e and \bar{e} , o and \bar{a} , u and \bar{u} we have also à and è. The letter à indicates the sound of the a in the German word 'Mann', or the short sound corresponding to the long a in 'father', and \hat{e} that of \hat{e} in the French word 'père'. These two vowels are often uncertain in their pronunciation. The vowel à is quite often sounded as a, as in àsh or ash, today; and è is often sounded as e, as in chèi. or chei, a woman; jabè-jo, from property, but jap (nom. sing.), property. In the following pages I shall mark à and è only when I am certain that these sounds are correct. In other cases, I shall write a and e. In addition to these I represent by a the sound of the a in 'cat', which is occasionally heard, as, for instance, in the word achhi or achhi, an eye. Similarly o represents the sound of the o 'on', which occurs in chon, leisure, and a few other words. There are The commonest is ai, which has nearly the sound of y in several diphthongs. 'fly'. It is sometimes pronounced like ei, and is so written by some authorities General Biddulph represents it by eyi. The diphthong au is on the language. sounded like the ow of 'how'. The letters ōi in ōiki, the termination of the infinitive,

While these pages were passing through the press, there was published Dr. T. Grahame Bailey's very full and complete 'Grammar of the Shina (Ṣiṇā) Language', (London, Royal Asiatic Society, 1924). Unfortunately its appearance was too

For instance, I represent both Colonel Lorimer's 2 and his a by a, his i and his 1 by i, and his u and his 7 by u

do not indicate a diphthong, the two vowels being separately sounded, as in thōiki, pronounced thō-iki, to do.

The sounds represented by the letters u and o are often interchanged. Thus, $d\bar{e}gu$ or $d\bar{e}go$, he gave. Final vowels, especially \hat{e} and e, are very commonly elided. Thus, $mas\hat{e}$, mase, or mas, by me; $ashpus\hat{e}$ or ashpus, the horse; $gut\hat{e}ro$, $gut\hat{e}ru$, or $gut\hat{e}r$, in a house; $d\bar{z}j\hat{e}t\hat{e}$, $d\bar{z}j\hat{e}t\hat{e}$, $d\bar{z}j\hat{e}t\hat{e}$, or $d\bar{z}j\hat{e}t$, to a daughter.

As regards consonants, the most prominent peculiarity is the frequency with which sounds which in India proper are aspirated are here aspirated so slightly that the fact is by some writers not shown in writing. Examples are mukh (sometimes written muk), a face, Hindōstānī mukh; khōiki (sometimes written kōiki), to eat, H. khānā; khojōiki (kojōiki), to ask, H. khōjnā, to seek; likhōiki (likōiki), H. likhnā, to write; thōiki (tōiki), to do; $sā^ati$, with, H. sāth. The sonant consonants g, j, d, d, and b are indeed, as in other Dardie languages, never aspirated at all. Thus, bāgo, a share, H. bhāg; majā, among, H. $m\~ajh$.

The fricative sound f is not uncommon, as in $baf\bar{u}r$, ibex-down; lafa, a pace; nifaioiki, to arrive. It does not appear to be used as an initial, but the aspirate ph is generally sounded like f with or without a slight p-sound preceding it, as in ${}^pf\bar{u}l$ (or $f\bar{u}l$) $th\bar{o}iki$, to throw; ${}^pfat\bar{u}$ (or fatu), afterwards; pfunar , a flower; ${}^pfit\bar{u}k$, vexed, and many others. The sound of the \underline{th} of 'think' does not occur at all, and that of 'this,' as well as the \underline{kh} and \underline{gh} corresponding to the Arabic \dot{c} and \dot{c} , respectively, do not occur except in borrowed words.

There are four true cerebral sounds in Shinā. These are represented by sh, ch, j (or zh), and d (or r). The letter sh is sounded like a strong Indian cerebral u sha, and similarly d (or r) is sounded nearly as in India. The letters ch and j are sounded by attempting to pronounce ch and j, respectively, with the tip of the tongue curled back so as to come in contact with the highest part of the roof of the mouth. Former writers often represented ch by tr and j by jr, and accordingly these sounds will often be found so spelt in the specimens of Shinā dialects on pp. 186ff. of Vol. VIII, Pt. ii. But such signs in no way represent the sounds of these letters, which are pure cerebrals. When the letter n is in close proximity to a cerebral letter, it itself becomes cerebralized to n, and is then pronounced as in North-West India. Such a cerebralization occurs in the word 'Shinā' itself, in which n has become n owing to the proximity of the true cerebral sh.

The sounds represented by the letters t and d are not dental, as in India, but are alveolar, as in English. In some words these sounds are post-alveolar, but, in such cases, they are certainly not cerebral. Natives of India, when transcribing these post-alveolars, write them as cerebrals. In the cases in which I have noted them, I have indicated the sound by putting a dot under them, as in atego, he brought; bado or baro, great; but it must not therefore be assumed that the sound is so distinctly cerebral as in India proper. Judging from the specimens received by me, when an Indian tries to write Shinā in the Persian alphabet he is uncertain as to how he should represent the sounds of these Shinā post-alveolars, sometimes writing them as dentals and sometimes as cerebrals. For instance a writer in transcribing a Shinā passage for me had to write the word got, a house, on two occasions. In one place he wrote atop and in the other atop. This was quite natural, as no Indian alphabet has any character

accurately indicating these alveolar and post-alveolar sounds. In the same way it will be found that other authorities differ as to whether, e.g., a word should be written with t or d or with t or d.

B usually becomes p, when it finds itself at the end of a word. Thus the word for 'property' in the Parable is *jab-, with an ablative singular jùbè-jo. But the nominative singular is jap, not jab, because the b is here final. So, the Shinā word corresponding to $s\bar{a}hib$, is $s\bar{a}ip$, not $s\bar{a}ib$. Similarly d, when final, becomes t. Thus we have a genitive $dud-\hat{e}$, of milk, but the nominative singular is dut, not dud.

II. **NOUNS.**—Gender.—There are two genders, masculine and feminine. Many masculine nouns end in -o, the corresponding feminine termination being -ī. Thus, $p\bar{o}cho$, a grandson; $p\bar{o}ch\bar{o}$, a granddaughter: $d\bar{a}do$, a grandfather; $d\bar{a}d\bar{i}$, a grandmother: $m\bar{a}lo$, a father; $m\bar{a}l\bar{i}$, a mother (also used to mean 'a mother's sister'). Sex is, however, generally indicated by different words, as in $b\bar{a}bo$, a father; $\bar{a}je$ and $m\dot{a}$, a mother: ashpo, a horse; $b\bar{a}m$, a mare: $d\bar{o}no$, a bull; $g\dot{a}o$, a cow: $j\bar{a}$, a brother; $s\dot{a}$, a sister; and so on. Some nouns indicate gender by prefixing $b\bar{i}ro$, male, and $sonch\bar{i}$, female. Thus, $b\bar{i}ro$ $sh\bar{u}$, a dog; $sonch\bar{i}$ $sh\bar{u}$, a bitch.

Number.—The nominative plural of most nouns ending in a vowel ends in \grave{e} . Some nouns ending in a consonant, especially when feminine, form their plural in \grave{e} , but others, especially masculines, in \bar{i} .

Many nouns of relationship form their plurals in -ārè or -rè. Thus,—

Plural. $j\bar{a}$, a brother. jārè. sà, a sister. saiārè or sēārè. di, a daughter. dijarè or dizharè. gyèn or grèn, a wife. gyinārè or grinārè. dàdī, a grandmother. dadiarè or dadarè. shàsh, a mother-in-law. shashārè. pfipi, a paternal aunt. ^pfapiārè. n**ū**jārè. nūsh, a daughter-in-law. j a j e, a sister-in-law. jajārè.

The word $p\bar{u}ch$, a son, is quite irregular, its plural being $d\bar{u}r\dot{e}$. Other irregular plurals are:—

Plural.

hanè, an egg.

dalu, a water-channel.

bār, a lead.

darī.

barào, a husband.

barīṣḥ, a year.

shū, a dog.

Case.—There are very few variations in the declension of nouns, although the different terminations have each variant forms. The case terminations are as follows. The Accusative is the same in form as the Nominative:—

Singular.	Plural.
Nom. and Acc, o , v .	-è, -ī (see above).
Agent. $-s(\grave{e})$.	$-s(\grave{e})$.
Obliqueè.	-o, -u.
Genè.	-0, -u.
Dat. $-t(\hat{e})$.	$-t(\grave{e}).$
Ahljo, -ju.	-jo, -jv.
Loc. I. $-r(o)$.	-r(o).
Loc. II. $-ch$, $-j$.	-ch, -j.

It will be seen that there are several forms for each case. In each instance the most usual form is given first. The use of the others depends partly on the personal equation of the speaker, and partly on the swing of the sentence; but in the nominative singular, while many nouns take o or i, others have no termination at all. When a termination ends in \hat{e} , e is often substituted.

In the terminations $-s(\hat{e})$ of the Agent, $-t(\hat{e})$ of the Dative, and -r(o) of the Locative I., the final e or o is frequently dropped, so that the usual terminations are -s, -t, and -r, respectively. So, the final $-\hat{e}$ or e of the Oblique singular is often omitted.

The termination of the Agent case is added to the Nominative. The Oblique case is really only the genitive put to a special use. The terminations of the Dative and Ablative are added to the Oblique Case, so that they usually appear as $-\partial t$ and $-\partial jo$, respectively, in the singular, and as -ot (or -ut) and -ojo, respectively, in the plural. The Locative I. case takes either ∂v or v in the singular, and usually v in the plural, so that we get $-\partial v$ or $-\partial v$ for the singular, and -uv for the plural. The Locative II. generally takes v in the singular, so that we get -ich or -ij. In the plural the termination is added to the oblique case, so that we get -och, -oj, -vch, -vj.

The Locative I. has the meaning of 'in,' and the Locative II. has the meaning of 'on', with, of course, in each case derivative meanings.

It will be remembered that the vowels o and u are often interchanged. We have an example of this in the word $g\bar{o}t$, a house, which becomes gut- in all cases except the nominative-accusative and agent singular. In other respects it is regular. Thus:—

8	ingular.	Plural
NomAcc.	gôt, a house.	$g_{ij}t_{i}$, houses.
$\Lambda { m gent}.$	<i>goțsè</i> , a house.	guțīs, houses.
Oblique.	gvịtè.	guţo.
Genitive.	gutè, of a house.	guio, of houses.
Dative.	guțèt, to a house.	gutut, to houses.
Ablative.	gutèjo, from a house.	gutrjo, from houses.
Locative I.	guțèr, in a house.	gutur, in houses.
Locative II.	gutich, on a house.	gutuj, on houses.

In the above I have given only the most commonly used forms. The other terminations given above can also be used.

If a noun ends in o, there are a few irregularities. Thus:—

NomAcc.	<i>manūjo</i> , a man.	manūjė, men.
Agent.	manējus, a man.	<i>manūjès</i> , men.
Oblique.	manůjè.	manūjo, manūju.
Genitive.	manūjè, of a man.	manūjo, of men.
Dative.	manūjėt, to a man.	manûjot, manūjut, to men.
Ablative.	<i>manūjèjo</i> , from a man.	manėjojo, manūjujo, from men.
Locative I.	manūjèr, in a man.	manūjur, in men.
Locative II	manūjich, on a man.	manūjoj, manūjuj, on men.

The following are examples of other nouns in the nominative and oblique cases. It will be observed that some present slight irregularities.

Singular.		Plural.	
Nominative.	Oblique.	Nominative.	Oblique.
sà, a sister, f.	$sai\grave{e}$	$saiar{a}r\grave{e}$	saiāro.
$j\ddot{a}$, a brother, m.	jawè	$m{j}ar{a}r\grave{e}$	$jar{a}ro.$
(And so other nouns	of relation in th	e plural as described above.)	•
gà, a valley-river, m.	gaiè	gaiè	gaiyo.
bādshā, a king, m. (g	en.) <i>bādshāè</i>	bādshaiè	bādshāo.
(but	dat. bādshāt)		
$p\bar{a}$, a foot, m.	pāè	$pai\grave{e}$	pā w o.
(There are two differ	ent declensions of	of nouns in \tilde{a} .)	_
$b\bar{a}l\bar{\imath}$, rope, f.	$b ilde{a} l ilde{\imath}$	$b ilde{a}l ilde{e}$	$b\bar{a}lyo.$
tarī, a polo-ball, f.	tari	tarīè	tario.
(There are also two	declensions of no	uns in ī.)	
mūlaii, a girl, f.	$mar{u}lai\grave{e}$	mūlai è	$mar{u}/aio.$
$d\hat{\imath}$, a daughter, f.	$dij\grave{e}$	dījārè	$dijar{a}ro.$
(See the nouns of re	lationship above	for the plural.)	v
^p fīṛḥū, a mosquito.	^p fichè	*fich è	ficho.
darū, big game.	$dar ilde{u} ilde{e}$	•••	,, 0,,00.
(There are also two	declensions of nor	$ans in \bar{u}.$	
$s ilde{u}$, a needle, f.	sũ è	$s ilde{u}\dot{e}$	$sar{u}o.$
$sh\widetilde{\overline{u}}$, a dog, m.	$sh\widehat{oldsymbol{\widehat{u}}}\grave{e}$	$sh\widetilde{m{u}}var{\imath}$ or $sh\widehat{m{u}}ar{\imath}$	$sh\widetilde{\widetilde{m{u}}}o.$
são, a bridge.	sàwè	કલ૫ા૦૯ે	sauwo.
barào, a husband, m.	beràw è	ber àk ul	beràkulo.
(This word is irregul			
Most nouns ending	in consonants are	e regular, such as :-	
<i>mārōch</i> , a mulberry, f.	mārōchè	mārōchè	mārōcho.
*funar, a flower, m.	^r funarè	^p funarè	funaro.
Irregular is:—			,,
dar, a door.	dārē	$d\hat{a}ri$	$dar{m{a}}m{ro}$.
See also the irregula	ır plurals given a	bove, on p. 330.	
We now proceed to	deal with the var	rious cases in greater detail.	
		-	

The Accusative is always the same in form as the nominative. This gives rise to no difficulties when a noun in the accusative is the object of a transitive verb, for, in that case, the subject is always put into the case of the Agent Examples are:—

mishte mishte pfunare Yūsufet deenen, (they) give fine flowers of many kinds to Joseph.

mas (agent case) taï dī tōm pūchèt bèchumus, I want your daughter (as a wife) for my son.

The Agent case¹ plays a more important part in Ṣḥiṇā than in Indo-Aryan languages. In them the subject of a transitive verb is put into the agent case only when the verb is in one of the tenses derived from the past participle. In Gilgitī Ṣḥiṇā,² on the contrary, the subject of a transitive verb is put into the agent case in whatever tense (even the present or future) that the verb may be. In this respect, Ṣḥiṇā agrees with the Tibetan spoken to its east. But, assuming that this case in Ṣḥiṇā is an agent, as in India proper (which is not yet proved), all memory of the fact seems to have disappeared, and, so far as meaning goes, it is treated as a nominative, and the verb agrees with it in gender, number, and person, and is not put into the third person as in India. Thus, we have mas damus, I give; tus dēino, thou givest; bādshās dēin, the king gives; sàs dīn, the sister gives; and so on. The termination of this case is -sè, -se, or -s. The last is only used when the nominative ends in a vowel. Thus, we have pūchsè, not pūchs, from pūrh, a son. But, in the plural, as the nominative dārè ends as a vowel, we may have dārèsè, dārèse, or dārès.

This case is used not only with the finite tenses of a verb, but also with participles and other non-finite forms. Thus:—

<u>kh</u>ûksê khē, fat thītuk khē tushum sik, kōs rèsèṭ nèi dēinis, 'the pig(s) having eaten, I eating what-is-left-over would be satisfied,' (and) no one used to give to him.

The Genitive singular is given above as ending in $-\grave{e}$ or -e, as in $gut\grave{e}$ (or gute), of a house; but this termination varies with different speakers. Sometimes it is heard ending in $-\check{e}^i$, $-\grave{e}i$, or -aii, or in various intermediate sounds. Examples are:—

gutè kūt, the wall of the house.

guțèr sheo àshpe tilèn han, in the house is the saddle of the white horse. hètè èk hètèwālè-jo, from a shopkeeper of the village.

The *Dative* is formed by adding -*tè* or -*te*, usually reduced to *t*, to the oblique case. Thus, *gutètè* or *gutèt*, to the house; *gututè* or *gutut*, to the houses. So:—

chuno pùrhsè bābèt rēgu, the younger son said to the father.

dūr kūyèkètè gōu, he went to a far country.

The Ablative is formed by adding jo or ju to the oblique case. Thus:— $dalj\grave{e}$ -jo waii nikhalè, draw water from the irrigation channel. So saiè-jo jigu, taller than the sister; $h\grave{e}t\grave{e}w\bar{a}l\grave{e}$ -jo, (bought) from a shopkeeper; $shik\bar{a}r\grave{e}$ -jo fatu, behind the fort.

¹ I have, in the above paradigm, given an agent case to $g\bar{o}t$, a house. This form, in the instance of this word, is necessarily hypothetical: for 'house' can hardly be the subject of a transitive verb.

² In the Shini of Astor, Gurez, Dris, and Dāh-Hanu, and, to a certain extent, in that of Chilas, there are two agent cases. One is used as in Gilgiti Shinā, but only for the subject of a verb in a tense not formed from the past participle. The other is used for the subject of a verb in a tense formed from the past participle. The use, therefore, of this second form of the agent case is more like the use of the agent case in Hindostāni and other Indian languages. See Vol. VIII, Pt. ii, pp. 187 and 211.

The First Locative is formed by adding ro as explained on p. 331. The final vowel is usually dropped, so that the termination is generally $-\hat{e}r$ or -ar in the singular, and -ur in the plural. This termination is probably a contraction of the postposition aru or uru, in, inside. Thus, gutero or gutero, or gutero, in the house; gutero, in the houses. So:—

ē kūyèr kūri kōner pōlo, in that country there arose a violent famine.

anu shakar waiur bilōkun, this sugar is to be melted in water.

anusè àçḥhīur fuk pōlun, he has cataract in his eyes.

The Second Locative is indicated by the termination -j or -ch. It is usually preceded by i in the singular, and by u or o in the plural. Thus:—

chãshè cherūj (nom. cherū) gyē, having gone up on to the top of the mountain. ùshpich rfal bīgas, I mounted the horse.
àshpich tīlèn dè, put the saddle on the horse.
sumich fat han, it is lying on the ground.
bādshāè hukemich, on the king's command.

This termination is probably a contraction of the postposition, $aj\hat{e}$ (see below), but is sometimes used with it. Thus we may have $m\hat{e}chich$ or $m\hat{e}chich$ aj \hat{e} or $m\hat{e}ch$ aj \hat{e} , all meaning 'on the table,' much as we should say 'up on the table.' Similarly, $t\hat{e}shij$ aj \hat{e} , on the roof.

The Suffix of Unity. If k is added to a noun, it gives the force of an indefinite article. It is generally preceded by the vowel \grave{e} , but if the noun ends in o, this is simply changed to u. The noun with this suffix is then declined like an ordinary noun ending in a consonant. Thus, $k\check{u}i$, country, $k\check{u}y\grave{e}k$ (for $k\check{u}i\grave{e}k$), a country, $k\check{u}y\grave{e}k\grave{e}$, of a country, $d\check{u}r$ $k\check{u}y\grave{e}k\grave{e}t$ $g\check{o}u$, he went to a far country. The noun may also be preceded by the indefinite pronoun ko, some, or by the numeral $\grave{e}k$, one, as in $man\check{u}jo$ man; $man\check{u}juk$, a man; ko $man\check{u}jakaii$ (or $\grave{e}k$ $mush\check{a}k\grave{e}i$ $d\check{u}$ $d\check{a}r\grave{e}$ $\check{u}sil$, of a certain man there were two sons. As another example of a noun ending in o, we may take $\check{u}shpo$, horse; $\check{u}shpuk$, a horse. This k sometimes has the force of the definite article, as in $mush\check{u}-k$, the man; $th\bar{t}u-k$, the thing done.

This suffix is not used only with nouns substantive. It is found added to the indefinite pronoun ko, anyone, whoever, as in konk. It probably also accounts for the final k in $j \in k$, anything, something, and is even attached to the verb han, is, in the phrase maii $j \in k$ hannk \bar{o} thai $ak\bar{i}$ han, whatever is mine is thine.

It is sometimes used with nouns in the plural, and then indicates a group or body, as in *du shalak shadari àshpār*, (a body of) two hundred mounted followers. Here the suffix is added to *shal*, a hundred. Similarly, we have *daièk*, a decade, and *maiāruk*, a single game animal, but *maiārèk*, a herd of such animals.

Other case-relations are indicated by postpositions, of which the following are the principal:—

- ajè or aji, on, upon, above. It is added to the oblique case, but the final vowel of this is usually elided. Thus, that kalam mèch' aji fat han, thy pen is lying on the table. As pointed out above, this postposition is often used in conjunction with the second locative.
- $g\bar{\imath}$, $g\bar{e}$, gini, or $g\bar{\imath}ni$, by means of, with (in an instrumental sense). It is used with the accusative, which, as we have seen, is the same in form as the

- nominative. Thus, charūţus ajōni chèlak-gī mà sharminda tharēgo, the thief has made me ashamed by an extraordinary trick; sūncho hīwo-gī, with a sincere heart; mas tu jūk-gīni shidam, I will beat you with a stick; tsirao-gini jèkur thōiki, to do the hair with a razor, i.e. to shave.
- kach or kachi, near. It takes the oblique case, and closely corresponds in its use to the Hindī pās. Thus, èk mās tom jamāatè-kach Haiabān baiyèn, Haiabān remains with his wife for a month; uthēi tom mālè kachi bujum, having arisen, I will go near my father.
- kār, kārţè, kāryo, or kāri, for, for the sake of. It takes the oblique case, and corresponds to the Hindostānī (kē) wāsţē. Thus, khūki charerōikè-kār, (sent him) to feed swine; anu sababè-kār, for this reason; anèsè-kāri, on this account. With this postposition, the final vowel of the oblique case is usually indistinctly pronounced, and may sound as a or i, as in wēa-kār gōun, he has gone for water; anu kōm sichōiki-kār mas mash thamus, I am making practice in order to learn this work.
- kir, beneath, below, under; kirtè, to below; kiro or kīro, from under. Both these take the oblique case. Thus, o tumè-kir, under that tree; junèk butè-kiro nikhāto, a snake came out from under the stone.
- majā (stress accent on the final syllable), in the middle, between, in; majā-jo or majnè-jo, from among, from in. These take the oblique case, but the final vowel è of that case is apt to be sounded as a. Thus, Nagir bodo pfītī gāèkè-majā han, Nagir is (situated) in a very narrow valley; sandūkè majnè-jo maï pēzār nikhalè, get my shoes out of the box.
- muchhó, before, in front of, ahead of (both of time and place). Except as stated below, it takes the ablative, as in ma-jo muchho wato, he came before me; àrū waiōikè-ju muchho dārè-jī dang dang thè, before coming in knock at the door. When the sense is 'in front of,' i.e. 'in or into the presence of '(equivalent to the Hindōstānī sāmnē), it takes the oblique case, as in ma-muchho wato, he came before me, i.e. into my presence.
- pfatū or fatū, after, behind (both of time and place). It usually takes the ablative, but sometimes the oblique. Thus, kèsè shūo tu-jo pfatū wāan, whose boy comes behind thee; āpè dèzè-jo pfatū, after a few days.
- sā'tī, sāatī, or sã'tī, with, in company with. It takes the oblique case, but the final vowel è of that case often tends to become o. Thus, ma-sā'tī wà, come with me; ko ùshtōn lōlyo ùshpo-sā'tī yèr gōun, which groom has gone on with the chestnut horse?

In addition to the *Instrumental* formed by adding gi or gini, etc., a few nouns form an instrumental with the aid of the suffixes -o for the singular and - \hat{a} for the plural. Thus, ro $M\bar{\imath}r$ $S\bar{a}ip\hat{e}$ shadarê hatê-jo turo (or $turi\hat{a}$) shiditun, he has been beaten by the Mir Sāhib's servant with a whip (or with whips). This form occurs only with certain nouns, and is rare. Compare $k\bar{a}ryo$, for the sake of; kiro, from below; and $ajon\dot{o}$, from above.

Adjectives.—Adjectives ending in o (and nearly all do so) form the feminine singular in ι , and the plural of both genders in \dot{e} . An adjective agrees with its qualified noun in gender and number. The final vowel is apt to be slurred over to a, and this

makes it difficult to say whether there is any agreeing in case, to the extent of having an oblique form. The final vowel of the adjective is sometimes dropped altogether before another vowel, but this is not very common, except that it may always occur before the abbreviated forms 'an, 'un, 'in for han or hun, he is, and hin, she is. Thus, misht' 'un, for mishto hun, he is good; misht' 'in, for mishto hin, she is good.

An adjective, when used attributively, precedes the noun it qualifies. As an exception, we may note the fact that the word $b\bar{u}to$, all, frequently follows its noun, as in $jak\ b\bar{u}t\dot{e}\ hair\bar{a}n\ b\dot{e}in\dot{e}n$, all the people become astonished; $b\dot{e}\ b\dot{u}t\dot{e}$, we all (agent $b\dot{e}\ b\bar{u}t\dot{e}s$).

Comparison is effected by putting the noun with which comparison is made in the ablative, as in anè mèch rèsè-jo uthalī hin, this table is higher than that. The superlative is made with the aid of the ablative singular of $b\bar{u}to$, all, or of the ablative plural of $b\bar{u}to$ with a demonstrative pronoun, or of the ablative plural of the noun with which comparison is made preceded by $b\bar{u}to$. Thus:—

```
anu mushā būtè-jo mishto hun, this is the best man.
anu mushā anī būţu-jo mishto hun, this man is the best of all these.
anu àshpo būţè àshpu-jo mishto hun, this is the best of all horses.
```

A list of the principal *Numerals* will be found in the Standard List of Words and Sentences.

III. PRONOUNS.—The pronouns of the first and second persons are:—

	I.	Thou.	$\mathbf{We}.$	You.
NomAcc.	mà	tu	bè	$\underline{tso}.$
Agent.	mas, masè	$tus,tus\grave{e}$	$b\grave{e}s$	<u>ts</u> os, <u>ts</u> us.
Oblique.	ma, mà	tu , $t\bar{u}$	asu	$\underline{ts}u$, $\underline{ts}o$.
Genitive.	maï, maii	thaï, thaii	asa ï , asaii	<u>ts</u> aï, <u>ts</u> aii.
Dative.	maţè, maţ	tuțè, tuț, tūț	asut	tsut.
Ablative.	majo	tujo	asujo	tsujo, tsojo.

Examples of these pronouns are:-

```
mà bujum, I will go.
```

mà àsh gatal gānus, I have walked on foot today.

shiloiki sababich mà soiki dubumus, because of the aching I cannot sleep.

charūțus ajōni chèlak gī mà sharminda tharēgo, the thief has put me to shame by an extraordinary trick.

zhèk mōrè-kārtè mà raṭēgo, for what reason did he stop me?

mas thaï dī tōm pūchèt bèchumus, I want your daughter (as a wife) for my son. maï konāli, my stick.

mai chēi àshpè han, I have three horses.

Khudaiè-kār maii hālich jāk ùţè, for God's sake take pity on my state.

anī khachī bām mat ginarēguno, you have made bought to me this worthless mare (i.e. you have made me buy it).

mat lèl nish, it is not known to me.

mai tom got dish dè, give me a place (i.e. a lodging) in your house.

ma-jo muchhō wato, he came before (i.e. ahead of) me.

mà muchhô wato, he came before me (i.e. into my presence).

mà-kār Kashgārè-jo rōs èk miṣḥṭo àshpo walerēgun, he has caused to be got (i.e. has obtained) a good horse for me from Kashgar.

mà-sà tĩ wà, come with me.

mà-kach rupaiè nish, I have no money with me.

hukam bili tu-ga wà, it has been ordered that you also should come.

mas tu jūk-gīni shidam, I'll beat you with a stick.

tu-ga däsèt harön, we shall take you also to the desert.

tus kachāk gāchèt walēgà, at what price did you buy it?

thaï dishèr kos kōm thèi, who will work in your place?

thai katār o sandūkèr hin, your knife is in the box.

tut khabar dam, I will give you information.

balà mas tut zhèk rēganus, what did I say to you yesterday?

tu-jo mà *fatakī-à, tu-jo mà sheiī-à, am I balder than you, am I blinder than you?

löshtai tü-kach wam, I shall come to you tomorrow.

hukam bilī bè-ga wōn (or <u>ts</u>o-ga wà), it has been ordered that we also should come (or that you also should come).

a<u>kh</u>ana ro chhūt bul to, bè gyē baiōn (or <u>ts</u>o gyē baièt), if he comes late, we shall (or you will) have gone.

bè-ga <u>tso</u> majā anī dīr hin, this is the boundary between us and you.

anè rupaiè <u>ts</u>os āko majā bagà, divide this money up among yourselves.

There are at least three Demonstrative Pronouns, each of which can be used as a pronoun of the third person. These are o and ro, both used when the object is remote, and anu or nu, used when the object referred to is near. O and ro may therefore be translated 'he,' 'she,' 'it,' or 'that,' and anu or nu by 'he,' 'she,' 'it,' or 'this.' All three have distinct forms for the feminine only in the nominative-accusative and in the agent singular. In the other cases of the singular, and throughout the plural, there is no distinction of gender. It may be added that, strictly speaking, o belongs to the Puniālī dialect. The usual Gilgitī word is ro.

As in Indian languages, demonstrative pronouns are sometimes used where we should employ the definite article, as in the sentence that katār o sandūkèr hin, your knife is in the box. Other examples will be found below.

When these pronouns are used as adjectives, they agree with the noun in gender and number, but do not change for case. In practice, however, the final vowel is often dubious.

The declension of o, he, she, it, that, the, is as follows:—

	Singular,	Plural. (Common Gender).
Nominative-Accusative.	masc. o , fem. \dot{e} , \dot{e}	ai.
Agent.	masc. ös, fem. ès	aisè.
Oblique.	èsè (comm. gend.)	aino, ainu.
Genitive.	èsè, èsēi, etc.	aino, amēi, ainaii.
Dative.	èsèṭ	ainoțè, ain u ț.
VOL. I, PART I.		

Ablative. $\partial s \partial -ju$ aine-ju.

Locative I. $\partial s \partial r$ ainur.

Locative II. $\partial s \partial h$, $\partial s \partial h$, $\partial s \partial h$, ainuj.

The following are examples of the use of this pronoun:-

ōs natè dē, he will give dancing (i.e. will dance).

ós o köm aköt thěgun, he has done that work by himself.

èsè gōt gyē, going to his (i.e. another person's, not his own) house.

èsè shutèr èk bāzībanak asul, there was a necklace on her neck.

èsè fatū, after that.

è e aji shāo chiviènen, they place the boy on the top of it.

aino-màjā èksè rêgo, one among them said.

In the following the pronoun is used adjectivally:—

(a) Masculine singular:—

o manujo ma-muchho walyà, bring ye that man before me.

o tôtà tom kūyè-jo sugōm dè kir waii bādshāt salām thèen, the parrot, coming from its own country down through the smoke-hole, says 'salaam' to the king. uskūnis tom tom guṭè-jo ṭīki o mushāt walènen, the relations, each from his own house, bring food for that man.

(b) Feminine singular:—

mas tèn-akī è chèi tûţ shō tharam, I shall now at once get that woman to accept you.

- è chẽyè shākèr èk kảo asul, there was a bracelet on the woman's arm.
- è khènè-jo anè khèn bosinèt mas ro nëi pàshīgunus, from that time to this time I have not seen him.
- è kūyèr tamāsha thèenis, in that country they were holding festival.
- è khènèt tan, up to that time, up to then.
- (c) Plural (common gender):--
- ai jago jo o shuo dur gyé baiyèn, the lad, going far away from those people, sits down.

The declension of ro, he, she, it, that, is as follows:

	Singular.	Plural (Common Gender.)
Nominative-Accusative.	masc. ro; fem. rè	rī.
Agent.	masc. rōs, rōsè ; fem. rèsè	rīs, rīsē.
Oblique.	rèsè (comm. gend.)	rīno, rīm.
Genitive.	rèsè, rèsēi, etc.	rīno, rīnēi.
Dative,	r èsè ţ. rèsètè	
Ablative.	rèsè-jo, -ju	rīnotè, rīnut, rīnot. rīn è -ju.
Locative I.	rèsèr, rèsar	rînu r .
Locative II.	rèsich, rèsij	
FITT 2.3.	-	rīnuch, rīnuj.

The following are examples of the use of this pronoun:—
ro balà Giltè-jo jas bul, he started off from Gilgit yesterday.
balāo-jo ro rogōto han, he has been ill since yesterday.

```
ro ma-jo muchho nifāto, he arrived before me.

ro bōdo hairān bul, he was much surprised.

ma-jo rè jèk bē miṣḥṭī bilī, how was she better than I ?

mas ro nēi pashīgunus, I have not seen him.

ro-ga lip tharèn suyōm dè ajè, him also he hurled up through the smoke-hole.

rè ākō sāatī harīgè, they took her with them.

rōs ako-kār bèchin, he wants it for himself.

rōs anu kōm tom ikhtiār gē thēgo, he did this on his own authority.

tus dègarèi gāch dōiki hano. yā rōs dōiki han, either you or he must give the price of the sheep.
```

tu pàshīgī to, rès-ga jādu thōik' 'in, when she sees you, she too will do magic.

rèsè àshpo maï àshpè-jo mishto han, his horse is better than mine.

rèsè èk pūchak asul, he had a son.

mas rèsè raioikèt bachik nëi walumis, I do not believe what he says (lit. to his saying).

rèsè nom jèk 'an, what is its name?

rèsèt buyèt thè, explain to him.

põi rūpaiè rèsèt dõik baii, it will be (necessary) to give five rupees to him.

mas rèsèt ho thēgas, I made a call to him (i.e. I called him).

rèsèt (or rèsè-ju) kujè, ask him.

mà rèsè-ju yèr tē gās, I went on in front of him.

'jakun bōt' thē, ''fū thè rèsè-wār, saying 'may she become an ass,' blow towards her.

Khudās sho dashtaii rī kos haranis, God best knows who used to take them away.

rīs akō-majā jèkèk churi thīgèn, they have committed some theft among each other.

nèi rīno-sā ti birga thèn, thev will fight with them again.

rīno-fatū rōs-ga hai thē gōṭ wān, he too, running after them, comes to the house.

rīno-majā zid hin, there is enmity between them.

In the following the pronoun is used adjectivally:—

- (a) Masculine singular:—
 ro manujo, that man.
- (b) Feminine singular:—

 anè pon rè ponè-jo mishţī hin, this road is better than that road.
- (c) Plural (common gender):—

mas rī du manūjè chār pachār thēgas, I brought the two men face to face. rī jak fatū-muchho hanuk bùtè cherūte hanè, the people living round about are all thieves.

The declension of anu, he, she, it, this, is as follows. A variant of it is nu, which is declined in the same way, with the omission of the initial a of anu. It may be remarked that forms of the pronoun nu also occur in the village dialects of Kāshmīrī.

	-	G	
		Singular.	Plural. (Common Gender.)
	Nominative-Accusative.	masc. anu; fem. ana, anè	$an\bar{\imath}.$
	Agent.	masc. anusè, anus; fem. anisè,	anīsè, anīs.

	an è no-majā bōdī farak hin,	there is great difference between t	them.
		o hûn thè, take whichever you like	
	In the following the pronoun		

(a) Masculine singular:—

anu bao maii han, this thing is mine.

anu kōmēi mai jèk chāra nish, of (i.e. for) this matter I have no remedy.

anu kūlu mas tèn pèzhōikètè herum, I shall take this grain now for grinding.

būṭè bawè anu sandūkè-jo nikhalè, take everything out of this box.

jak būṭè anu manūjè-jo nārāz han, everyone is disgusted with this man.

(b) Feminine singular:—

anè dishè-jo maï pēzār kos harīgun, who has removed my shoes from this place?

è khènè-jo anè khèn bosinèt, from that time to this time.

anè pon rè ponè-jo mishti hin, this road is better than that road.

anè môrè hakèr, in regard to this matter.

anī khàchī bām mat ginerēguno, you have made me buy this worthless mare (lit. you have made bought to me this worthless mare).

(c) Plural (common gender):—

anī jārè, kiri waiōikèr, dāsè-jo miṣḥṭè miṣḥṭè *funarè walē, Yūsufèṭ dēenen, the brothers, on coming down, having brought beautiful flowers of varied kinds from the country, give them to Joseph.

anī chēès Yūsuf pashī katerè-gīni jès tom natho chīninen, jès..., the women, or seeing Joseph, some of them cut their noses with the knives, some ...

The Genitives of the personal and demonstrative pronouns are used as Possessive Pronouns.

Equivalent to the Hindī apnā, always referring to the subject of the sentence, is the Reflexive Possessive Pronoun tomo or tom, own. It is treated like an adjective. Thus:—

mas thai dī tom pūçhet bechumus, I want your daughter for my (own) son.

mat tom got dish dè, give me a place in your house.

ros anu kom tom ikhtiar gë thëgo, he did this on his own authority.

mālus tomè shadarut hukam thēgo, the father gave order to his servants.

uskānīs tom tom guṭè-jo ṭīki o mushāt walènen, the relations, each from his own house, bring food for that man.

èsēi jā tomī saiè-jo jigo han, his brother is taller than his sister.

The Reflexive Pronoun is aki or aki, self. Its oblique form is ako or ako, which is also used for the accusative. Thus:—

mas akī pashīgas, I saw it myself.

rōs ako-kach chhivīgo, he kept it with himself.

Equivalent to the Hindī $\tilde{a}pas-m\tilde{e}$, is $ako-maj\tilde{a}$, among themselves, as in: ris $ako-maj\tilde{a}$ ger $th\tilde{e}ig\tilde{e}$, they quarrelled among themselves.

It is very doubtful if there is any *Relative Pronoun* in the language. Sometimes the Interrogative Pronoun *ko* appears to be used as such, but an occurrence of this kind is rare. As a rule the two clauses are simply stated in juxtaposition, the relative clause being put first. Thus:—

o manŭ jo balà wato, èk rūpai èsèt dōkun, a rupee is to be given to the man who came yesterday.

balà wato man ijo, anu hun, this is the man who came yesterday.

As an example of the use of ko, it is not incorrect to say:—

o manūjo, ko balà watus, àsh-ga watun, the man who came yesterday has also come today. But this construction is not usual.

The Interrogative Pronouns are ko, who?, which?, what? (animate), and zhèk or jèk, which? what? (inanimate). Either may be used adjectivally. In that case, ko, like other adjectives, agrees with its noun in gender and number, but not in case. On the other hand zhèk or jèk, when used as an adjective, is invariable.

The pronoun ko is declined as follows:—

	Singular.	Plural. (Common Gender.)
Nominative-Accusative.	Masc. ko; Fem. kè	$kai,k\grave{e}i.$
Agent.	Masc. kōs, kōsè; Fem. kès, kèsè	kais, kaisè.
Oblique.	kèsè	kaisè.
Genitive.	kèsè, kèsēi, etc.	kaisè, kaisēi, etc.
Dative.	kèsèţ	kaisèţ.
Ablative.	kèsè-jo	kaisè-jo.
Locative I.	kèsèr	kaisèr.
Locative II.	kèsich, etc.	kaisich, etc.

The following are examples of its use:-

ko àshtōn lelyo àshpo-sāatī yèr gōun, which groom has gone on with the chestnut horse?

anè dishè-jo maï pēzār kos harīgun, who has removed my shoes from this place? thaï dishèr kōs kōm thèi, who will do the work in your place? anu kāgaz kèsè-kār han, for whom is this letter?

The pronoun $zh\grave{e}k$ or $j\grave{e}k$ is declined like a substantive in the singular when not used adjectivally. Thus:—

```
bala mas tuṭ zhèk rēganus, what did I tell you yesterday?

anusè hakèr jèk rāano, what have you to say in regard to this?

rèsè nōm zhèk han, what is its name?

zhèkè nōm khujèno, of what are you asking the name?

zhèkè-kār, for what? on what account?

rèsè-kār jèk hukam hin, what order is there for him?
```

The interrogative pronouns are also used as Indefinite Pronouns. Ko may take the form ko-ga, and zhèk may take the form zhèkèk, meaning 'a thing,' 'something.' Thus:—

ko nēi watèn, no one came.

ko-ga wato to, rīnut dē, if anyone came give it to them, i.e. give it to whoever comes.

The genitive of ko-ga, is $k\grave{e}s\grave{e}-g\grave{e}$ or $k\grave{e}s\grave{e}-ga$ as in $k\grave{e}s\grave{e}-g\grave{e}$ $k\bar{a}t$ han to, $d\grave{e}$, whose-ever the wood is, give (it to him).

```
kèsėt pasand thōiki, to approve of some one. matè zhek ţiki dē, give me some breid.
```

mas zhèkèk bèchumus, I want something.

mai zhèk chāra nish, I have no remedy, i.e., there is nothing I can do in the matter.

 $Zh\grave{e}ga$, with a negative, means 'nothing,' not anything, not any, as in $zh\grave{e}ga$ nish, there is nothing.

Pronouns of Quantity are achāk or aiyāk, so much, so many, and kachāk, how much, how many? The latter may be used either as a relative or as an interrogative. Examples are:—

achāk gin kachāk awājin to, take so much as is necessary.

achāk nēi gin, don't take so much.

kachāk manūjè han to, aiyāk kurtsiè walè, bring as many chairs as there are people.

tus kachāk gāchèt walēgà, for how much price did you buy it?

ānyo Yāsīnèt kachāk dèzo pon han, how many days march is it from here to Yasin?

IV. VERBS.—A. Auxiliary Verbs and Verbs Substantive.—The present tense of the Verb Substantive has, in the singular, separate forms for the Mascaline and for the Feminine. In the plural it is of common gender. It is conjugated as follows:—

I am, etc.

SINGULAR.		PLURAL.
Masculine.	Feminine.	Common Gender.
1. hanus, hunus	han is	hanis, hanès.
2. hano	$han\grave{e}$	hanèt.
3. han, hun, hano, hanu	$hin, han ar{\imath}$	han, hanè.

The accent throughout is on the first syllable.

In the third person singular, the initial h is often dropped, and the remaining 'an, 'un or 'in becomes an enclitic. Thus, mishto hun, he is good, becomes misht'-'un, and mishto hin, she is good, becomes misht'-'in. In the same person, the forms without a final vowel are those most commonly used. The following are examples of the use of this tense:—

mas tèn-aki bujoikèt chak hunus, I am ready to start at once.

mà rèsè zima hanus, I am his surety.

tus degarei gach doiki hano, you are to (i.e., must) give the price of the sheep.

agār nishōikèt taiār han, the fire is on the point of going out.

anu tut yashki hau, he is fit for you.

jak būtè anu manūjè-jo pfitik han, everyone is disgusted with that man.

thaï àshpo han-à, have you a horse?

thaï jèk kôm 'an, what business is it of yours?

rèsè nom zhèk 'an, what is its name?

thaï sũrat anè sũratè-màjā jèk yūlo hun, what difference is there between your appearance and this picture.

anu shadar açhèmo han baii, amà her kōmèt tīnu hun, this servant may be a knave, but he is clever at anything.

tèn bilkul mishto hun, he is quite well now.

thaï jèk kom hanu to, mat chaga thè, whatever your business is, tell me.

èsè uchōikèt rak hin, it is his intention to run away.

maï kōm daper thaii jèk hājat hin, what business have you got with my affairs? thaï katār o sandūkèr hin, your knife is in the box.

anè sandūk āpīk futīl' 'in, this box is a little broken.

ro mishto bōiki umēt hanī, there is hope of his getting better.

sīnēi-majā èk barī gīrīk tsak uthēi hanī, there is a large boulder standing in the middle of the river.

maï nasīb jèk hanī to, è baii, whatever my fate may be, that will come to pass. maï chēi àshpè han, of me there are (i. e., I have) three horses.

ānyo Yāsīnēṭ kachāk dèzo pon han, how many days' march is it from here to Yasin?

The Past tense has three forms,—two longer, with l in the termination, and a shorter without l. The shorter form is conjugated as follows:—

I was, etc.

SIEGULAR.		PLURAL.
Masculine.	Feminine.	Common Gender.
1. asus	asis	asès.
2. <i>aso</i>	asè	$as\grave{e}t$.
3. as u	asī	asè.

The first form with l is conjugated as follows:—

1. asulus	asilis	asi l is.
2. asulo	$aoldsymbol{sil\dot{e}}$	$asil\grave{e}t.$
3. asul, asulu	$asil,\ asilar{\imath}$	asal, a silè.

In the third person, the forms ending in a vowel are not in general use. In both the above paradigms, the stress accent is on the first syllable throughout.

The second form with l is a compound of the two preceding forms, in which the form without l is added after the form with l. We thus get asul'usus, I was, and so on for the other persons. As indicated, the accent is here on the penultimate.

The only example of the first form that I have noted is:—anè miṣhṭ' asī, this (thing, fem.) was good.

Examples of the first l-form are more common. Thus:—

yūn ga sūrī pārulo shūok asul, there was a boy like the moon and the sun.

rèsè èk pūchak asul, he had a son (lit. there was a son of him).

muchhō anu ashāto asul, tèn āp-āp shatīlo bulun, formerly he was weak, now he has gradually become strong.

chilinji chãshij achāk hīn asul, bè pār bōik bash nē asul, there was so much snow on the Chilinji Pass that there was no ability that we to cross it (i. e., that we were unable to cross it).

akhana mat khaber asil to āl mà bam sīk, if there had been news to me (i.e., if I had been informed), I should have been there.

sīnij sao asil, there was a bridge over the river.

anu dawai jamāat perī asil, the Dev's wife was a fairy.

There is a negative verb substantive, nish or nush, meaning 'is not,' are not,' as in the following:—

anusè bujōikèt rak nish, there is no intention of him to go (i.e., he does not intend to go).

anèsè-jo basko mat derkāl nish, more than this is not necessary for me (i.e., I do not want more than this).

mat lèl nish, it is not known to me (i.e., I don't know).

yā kīno àshpo walè, yā loïlo. Perwā nish, bring either the black horse or the bay. There is no matter (which).

Other tenses of the verb substantive are supplied from the verb $b\tilde{o}iki$, to become. The following are the principal tenses of this verb:—

Infinitive, $b\bar{o}ik$, $b\bar{o}ik$, or (in composition) $b\bar{o}k$, to become, the act of becoming. (This can be declined like a noun. Its oblique case is $b\bar{o}ik\hat{e}$.)

Apocopated Infinitive, bō-.

Present Participle (continuous), bōjè, a-becoming, becoming.

Conjunctive Participle, bè, bē, bēi, or bai, having become, having been.

Future and Present Subjunctive, I shall become, I may become, etc.

SINGULAR.	PLUBAL.
Common Gender.	Common Gender.
1. bom, bam, bum, baièm¹	$b\bar{o}n,\ bai\bar{o}n^1$
2. bè, bèi, baiè ¹	$bar{a}at$, $bai\grave{e}t^{\scriptscriptstyle 1}$
3. baii, baiè, bai, bēi	bèen, bēin, baien¹

Present, I become, I am becoming, etc.

Masculine.	Feminine.	Common Gender.
1. bōmus, bamus	bamis	bōan as
2. bēino	$bar{e}inar{e}$	bāanèt
3. bēin, bēen	$b\bar{\imath}n$	bēinen, bēenen, bēenin

Imperfect, I was becoming, etc.

1. bamasus	bamisis	bōna s is
2. bēiso	$bar{e}is\grave{e}$	$bar{a}as\grave{e}t$
3. bēis, bēes	$bar{\imath}s$	<i>bèinisè</i>

Past (a), I became, etc.

1. bulus	bilis	$bil\`es$
2. bulo, bilo	$boldsymbol{i}l\grave{e}$	$m{bil} \hat{e} t$
3. bul, bulu, bulo	bil,bili	bilè

¹ These forms are used only in the formation of the subjunctive or of the future perfect tense of another verb. See p. 353.

Past (b), I became, etc.

Masculine.	Feminine.	Common Gender
1. $b\bar{\imath}gas$	$bar{\imath}gar{\imath}s$	$b ar{\imath} g \grave{e} s$
2. hīaà	$b \bar{i} g \hat{e}$	bīgèt
3. huau, bugo	$bar{\imath}gar{\imath}$	$bar{\imath}g\grave{e}$

Perfect (a), I have become, etc.

1.	bulunus	bilinis	bil ènis
2.	buluno	$bilen\`e$	bilènèt
3.	bulun	bilin	bilèn

Perfect (b), I have become, etc.

1. bīgānus, bīganu	s $biginis$	bī gènis
2. bīgāno, bīgano	bīgenè	bīgènèt
3. bīgun	$b\bar{\imath}g\bar{\imath}n$	$oldsymbol{b}$ i g è n

Pluperfect (a), I had become, etc.

1. bulusus	$bil\grave{e}sis$	bilèsis
2. buluso	$bil\`es\`e$	bilèsèt
3. bulus	bilis	bil è sè

Pluperfect (b), I had become, etc.

1. bīgasus	$bar{\imath}gisis$	<i>bīgèsis</i>
2. bīgaso	$bar{\imath}gis\grave{\epsilon}$	bīg ès èt
3. bīgus	$m{b}igar{\imath}s$	$bar{\imath}g\grave{e}s$

Imperative.

2. bo, become thou.

bà, become ye.

3. bot or bot-à, let him or them be.

It will be observed that in this verb the Past, Perfect, and Pluperfect tenses have each two forms, marked a and b, respectively, in the paradigm. In each pair of forms the meaning is the same.

This verb is used not only with the meaning of 'to become,' 'to be,' but is also employed, with the infinitive of another verb, to mean 'to be able.'

The following are examples of the use of this verb in all its meanings:—Infinitive.

Chilinji chāṣhij achāk hīn asul, bè pār bōik bash nē asul, there was so much snow on the Chilinji Pass that we were unable to become across (i.e., to cross) it.

shakar fash bōiki kachi han, bāzārē-jo basko girōk-'un, the sugar is about to become finished, more must be got from the bazaar.

- jas bõikè-jo muchhō, tu ma-kach wà hukem ginõikèt, before you become started (i.e., before you start) come to me to get orders.
- àshpo er bōikèr rōs àshpo zamēgo, on the horse becoming shying (i.e., on its shying) he bent the horse.

Apocopated Infinitive.

- ana khèn bō-sīnèt, up to this time being, i.e., up to now.
- shūo mishto bō-sīn waiī khabar ginen takursè, by the time the boy becomes better (lit. until the boy's becoming better), the barber comes and enquires (how he is).

Conjunctive Participle.

- tu aiè bē baiyèno, having become thus you sit, i.e., you sit thus.
- o gala dīto parulo bē yaiyen, he walks having become like a wounded man, i.e., as if he were wounded.

Future and Present Subjunctive.

- loshtaièk bujoik bam, to-morrow I shall be able to go.
- akhèr ànu kōm tus thôik bè, in the end you will be able to (i.e., must) do this work.
- kai khèn bō-sīnèt tus maï ūṣḥ dōik bèi, by when will you be able to pay what you owe me?
- tèn Haiabān nisè-sāatī chyū baii, now Haiabān will become in love with this (woman).
- põi rūpaie rèsèt dõik baii, èk rūpaièk zerūr dõik bēi, it will be (necessary) to give five rupees to him, (in any case) it will certainly be (necessary) to give one rupee.
- tut lèl baii, it will become known to you, i.e., you will understand.
- maï nasīb jèk hanī to, è baii, whatever my fate will be that will come to pass.
- maii buba baii to, taii sum ōshè dēi sik, if my father were (here), he would give your dust to the wind (i.e., annihilate you).
- akhana ro mirījè sik to, rèsè pūçh rèsè dishèr Rā baii sik, if he died, his son would become Raja in his place.
- àsh rāato rèsèt khat dè, kyèto ro loṣḥṭaiikè chèl jàs bēi, give him the letter to-night, so that he can become departed (i.e., leave) early to-morrow morning.
- Giltèt bī-ga-èk tārīkèr nifaiōikè-kār, bè Chilāsè-jo ashtāī tārīkèr Giltēi-wār jas bōik bōn, in order to reach Gilgit on the twenty-first, we shall have to start from Chilās on the 18th.
- dashtamus zerūr thai būţ tser bēin, I know your boots will certainly go to pieces.
- anè kursī anè sandūkè-sāatī gati thē gane, kyèto anī berī baiyè pārulè bèen, having put this chair together with the box, tie (it), so that the two half-loads may be equal.
- akhana ro Yasīne-jo buje sik to, Yasīnei jek būte shuriār been sik, if he were to leave Yasin, all the people would be glad.

In the following the subjunctive meaning is emphasized by the addition of λ :—

rõs ma-jo khujēgu thaï àshpo gāch ginōiki bōm-à yā nē, he asked me (whether) I be (willing) to buy your horse or not.

mà āl baièm-à, nēi baièm-à, mat lel nish, whether I may be there or not is not known to me.

shaiyad kiri gaièr bāruṣḥè bèen-à, perhaps there may be duck (lower) down in the ravine.

Present.

dāsèr haiè thīgas to, mà oyano bamus, (when) I have played in the open, I become hungry.

tus mat poi rūpai tèn doik beino, can you give me five rupees now?

bādshā khush bēin jèrī mur gī, the king becomes pleased at what the old woman said.

dūt sữ hạch gyēi mūlaiè aĩar shak bēin, the milk going on a straight (line) becomes full in (i.e., fills) the mouth of the girl.

Haiabān sōdāṭ jàs bēin, Haiabān becomes departing (i.e., sets out) for trading. gumān bīn ma-kach èk manak gūm bēen, probably there is with me about a maund of wheat.

tu-jo basko pfatako nëi bëen, there is none more bald than you.

laiak nëi been to, bas fat thèà, if it cannot be found, just give ye it up.

san mishto nëi bëen, the light is not good.

na ro rukhsatij bujõik bēen, na tu, neither he can go on leave, nor you.

her-khèn anu àshpij bula dégè to, kudo bēen, whenever they have played polo on this pony, it becomes lame.

With \grave{a} intimating an implied question, and hence giving a subjunctive force, we have:—

manèt-kachi manèk gūm bēin-à, yā basko baii, bush, whether there may be about a maund of wheat, or whether there is more, is not known.

gumān (fem.) bīn, there is a presumption, hence, probably, I suspect (that), I imagine (that). So imkān bīn, there is possibility, possibly.

bādshāè jamāat ān-ān thē kachèrè bīn, the king's wife, hee-hawing, becomes a mule.

tabakèr paiè shak bēenen, maggots became full in the dish, i.e., the dish became full of maggots.

anu èk Ifala, kūyèr kachāk chēyè agūrè nēi bēenin to, chabīo chèri nikhalē, ai chēuṭ èk èk thē dè, cut this one apple into sixty pieces, and as many women in the country as are not pregnant, to those women give one each.

Imperfect.

shudaro shakaj lumigo to, shako chas bees, when he laid hold of the boys' arm, the arm was becoming (i.e., used to become) broken (i.e., the arm of one of the boys broke).

Past.

tèn tik khīgaso, kashap kè bè oyāno bilo, you had just eaten food, why did you become hungry so soon?

Mīr Sāip tom shadarè zhèk thītuj pfitīk bul (or bulun), the Mīr Sāhib was (or has been) displeased at something which his servant had done.

ro bala Giltè-jo jas bul, he became started (i.e., he started off) from Gilgit yester-day.

sōrè-'ji maï kōn nīlo bul, my ear became blue with the cold.

ro bōdo hairān bul, he became much surprised.

èk èkèt sāatī bul, one became with to the other, i.e., one helped the other.

anī paisa (fem.) fash bil, this money became exhausted.

ma-jo rè jèk bē mishtī bilī, how was she better than I?

rès ādè thōikèr, būṭè rōzḥātè bilè, on her saying this all became angry.

àshpich *fal bigas, I became mounted on the horse, i e.. I rode.

anè dishè-jo tu lan bīgà to, mas tu maram, if you became moved (i.e., if you move) from this place, I will kill you

Perfect.

Yūsuf jōno hun. Miserī Bādshā bulun, Joseph is alive. He has become King of Egypt.

gumān bīn kākas gala dito bulun, probably the partridge has been wounded.

tèn ap-ap shatilo bulun, now he has gradually become strong.

ana satranji jèk-na-jèkèk khachī bilin, this carpet (fem.) has become somewhat damaged.

derum-bō-sīnèt ma-kār miṣḥṭo shuka lōik bīgāno yà nēi, have you yet been able to get me a good chōgā or not?

Pluperfect.

gutè-jo yèr-āl maï bāwak fat bulus, a thing of mine had been lying a short distance ahead of (i.e., from my point of view, beyond) the house.

Imperative.

màs bèchumus tu pār è chīshich-ajè bo, I request, 'do you climb (i.e., I want you to climb) up on to the top of that hill over there.'

tu jèk bo to, mas tu maram, become prostrate (i.e., lie down), (and) I will kill you.

o āl nēi bōt, let him not be there! i.e., may he not be there!

Khudaiyù, anè kachèrèk bôt, O God, may this (woman) become a mule!

' jakūn bōt' thē, ½fù thē rèsè-wār, saying 'may she become an ass,' blow towards her.

With reference to the statement made above that bōiki often means 'to be able,' it may here be mentioned that the Ṣḥiṇā for 'not to be able' is dubōiki. Examples of the use of this latter verb will be found under the head of Intransitive Verbs.

B. The Transitive Verb.—In Shinā there are two different verbal conjugations,—that of the Transitive and that of the Intransitive Verb. These differ materially in the conjugation of the past tenses. Except in the Future tenses and in the Imperative, the

finite tenses have two genders each in the singular, while in the plural they are all of common gender. If, in the singular, the subject of the verb is masculine, the masculine form of the verb is used, and if it is feminine, the feminine. Whether transitive or intransitive, and whether in a past tense or not, the verb agrees with the subject in number and person. There is nothing like the passive construction of the past tenses of a transitive verb with which we are familiar in India. On the other hand, the subject of a transitive verb, in whatever tense the latter may be, is always put into the Agent case, as in mas shidam, I shall strike. This custom, although the form itself is Aryan, seems to be borrowed from the neighbouring Tibetan, in which the idiom is the same, and in which the Agent case also ends in s. Thus, the Tibetan for 'I' is na, but 'I beat you' is nas khyod rdun. The Tibetan verb does not change for number or person, but Shinā, while adopting this idiom, has at the same time retained its old Aryan inflexions, and does so change.

The Infinitive, in its full form, ends in $-\bar{o}iki$, $-\bar{o}ik$, or $-\bar{o}k$, as in $shid\bar{o}iki$, $shid\bar{o}iki$, or $shid\bar{o}k$, to strike. This is really a verbal noun, meaning 'the act of striking' and is declinable like any other noun, its oblique case ending in $-\bar{o}ik\dot{e}$. It is also used as a participle of necessity, as in $shid\bar{o}iki$ or $shid\bar{o}k$, one who has to strike, one who must strike, one who is on the point of striking. An apocopated form of the infinitive is obtained by omitting the final -iki, as in $shid\bar{o}$. This is used in the formation of the present participle, and also in certain adverbial phrases, such as $shid\bar{o}-sin\dot{e}t$, up to the time of striking.

A Noun of Agency is the same in form as the infinitive, as in shidoiki or shidoik, (one who is prepared) to strike, hence, a striker. It is really the infinitive employed in a special idiom.

A Present Participle (continuative) is formed by adding the postposition $aj\hat{e}$ to the apocopated infinitive. Thus, $shid\hat{o}-'j\hat{e}$ or $shid\hat{o}j\hat{e}$, on striking, equivalent to our old-fashioned 'a-striking.'

The Conjunctive Participle, or Past Participle Active, is formed by substituting \bar{e} , $\bar{e}i$, or aii for the $-\bar{o}iki$ of the infinitive, as in $shid\bar{e}i$, $shid\bar{e}i$, or shidaii, having struck. In this form the stress accent is always on the termination. Thus, $shid\bar{e}i$. Root-accented verbs (see below) take the termination \hat{i} not $\hat{e}i$. Thus, $har\hat{i}i$, having taken away.

For all Verbs, the conjugational base may conveniently be assumed to be what remains of the infinitive after rejecting the final $-\delta iki$. Thus the conjugational base of $shid\delta iki$, to strike, may be taken as shid- and that of $d\delta iki$, to give, as d-.

The tenses of the Transitive verb fall into three groups. The first group is founded on the Future tense, in which the personal terminations are added directly to the base. Thus, mas shid-am, I shall strike. This tense was originally a present indicative, and, as we shall see from the examples, is still occasionally employed as such. From this a Present is formed by adding fragments of the present tense of the verb substantive, as in mas shidamus, for shidam-hunus, I strike. Again, an Imperfect is similarly formed with fragments of the past tense of the verb substantive, as in mas shidamusus, for shidam-asus, I was striking.

In the second person plural of these three tenses, the stress accent usually falls on the termination, as in shid at, you will strike; shidanet, you strike; shidaset, you

were striking. Some verbs, however, prefer to keep the accent on the base, and, in such verbs, the termination of this form is lightened. Thus, the verb $har\bar{o}iki$, to take away, forms harat, not $har\bar{a}at$, you will take away; haranet, not haranet, you take away; hareset, not haraset, you were taking away. These verbs, which may be called 'Root-accented,' have other peculiarities, which may be summarized here. The conjunctive participle ends in i, not e, as in hari, not hare, having struck. The second person singular of the imperative has no termination, as in har, not hare, take away!, and the past tenses (see below) are formed with the termination -ig, not -e, as in harigo, not harego, he took away. These forms will be dealt with more fully on subsequent pages.

The second group of tenses is founded on an old past participle, now obsolete, made by adding $-\bar{e}go$ or $-\bar{e}gu^{-1}$ to the conjugational base. Thus, $*shid-\bar{e}go$ or $*shid-\bar{e}gu$. In the first and second persons of the past tense, the personal terminations are simply added to this old past participle, as in $mas shid\bar{e}gas$, I struck. The third person is the participle alone, without any termination, as in $r\bar{o}s$ $shid\bar{e}go$, he struck. To form a perfect, fragments of the present tense of the verb substantive are added, as in mas $shid\bar{e}gunus$, for $shid\bar{e}gu-hunus$, I have struck. Similarly, with the past tense of the verb substantive, we get a pluperfect, as in mas $shid\bar{e}gasus$, for $shid\bar{e}gu-asus$, I had struck. Root-accented verbs (see above) take $-\bar{e}g$ -, instead of $-\bar{e}g$ -, in these tenses, and we shall see subsequently that some of these also insert $\bar{e}s$ in the tenses of the first group. In these tenses the stress accent is always on the first syllable of the termination. Thus, $shid\bar{e}gas$, $shid\bar{e}gasus$.

The third group consists of Periphrastic tenses, formed with the help of auxiliary verbs. Such are:—

The Future Perfect, formed by conjugating the Conjunctive Participle (or Past Participle Active) with the future of $b\bar{o}iki$, to become, as in $mas \ shid\bar{e} \ bai\bar{e}m$, I shall have struck.

The Tense of Obligation, formed by conjugating the infinitive, in its sense of a participle of necessity, with the verb substantive, as in mas shidōiki hunus, I have to strike, I must strike. This is usually contracted into mas shidōk-'unus or shidōkunus, which may also mean, 'I am on the point of striking.'

An element of uncertainty, equivalent to our 'perhaps,' is given by adding bai, the third singular future of bōiki, to any of the tenses of the first two groups, as in mas shidam bai, perhaps I shall strike; shidēgas bai, it may be that I struck. In many cases the context will make this practically equivalent to a subjunctive mood.

All the above forms belong to the Indicative Mood. The Future Indicative may also be used where we should use the Present Subjunctive, and in such cases, if the particle $\grave{\alpha}$ is added, it gives a definite subjunctive force, as in mas shidam- $\grave{\alpha}$, I may strike. Other tenses of the English Subjunctive are indicated by the use of certain particles, which will be dealt with under the head of Indeclinables, together with the appropriate tenses of the Indicative. We shall see, under the head of Indeclinables, that this particle, $\grave{\alpha}$, is also used to give an interrogative force to a sentence, and this is

¹ The vowe¹ of this termination $\bar{e}go$ or $\bar{e}gu$ is really the long sound of \hat{e} , but, as the representation of this would entail complications in printing. I write simply \bar{e} , which approximately, if not accurately, represents the sound

no doubt its original power. When used to indicate the English subjunctive, it really suggests an implied question.

The second person singular of the Imperative ends in \grave{e} , and the plural in \grave{a} or $y\grave{a}$. Thus, $s\rlap{h}id\grave{e}$, strike thou, $s\rlap{h}id\grave{a}$ or $s\rlap{h}id\grave{a}$, strike ye. In the singular, root-accented verbs (see above) drop the final \grave{e} , as in har, for $har\grave{e}$, take thou away. The third person singular and plural ends in δt , as in $s\rlap{h}id\delta t$, let him or them strike.

With these preliminary remarks, I now proceed to give the paradigm of the conjugation of the transitive verb $shid\bar{o}iki$, to strike. The most usual forms only are given, and it must be understood that there is much laxity in the employment of the vowel sounds, which vary with different speakers or with the stress accent. It may also be noted that, with some speakers, there is a tendency for the g of the typical $-\bar{e}g\hat{a}$ -of the tenses of the second group to degenerate into g, while the preceding vowel is modified or absorbed. Thus, such a speaker will say dyau for $d\bar{e}gu$, he gave, and $d\bar{e}yanus$ for $d\bar{e}gunus$, I have given:—

Infinitive, shidoiki, shidoik, or shidok, to strike, the act of striking; (as participle of necessity) one who must strike, one who is on the point of striking. Sing. dat. shidoikèt(è), to strike (infinitive of purpose, etc.), loc. shidoikèr(o), on striking.

Apocopated Infinitive, shido-.

Noun of Agency, shidoiki, shidoik, one who (is prepared) to strike, hence, a striker.

Present Participle, shidojè, a-striking, striking.

Conjunctive Participle or Past Participle Active, shidé, shidéi, or shidaii, having struck (but harî, having taken away).

Future and Present Subjunctive, I shall strike, I may strike, I strike, etc.

SINGULAR.	PLURAL.
Common Gender.	Common Gender.
1. shidam, shidum	șhid ôn
2. șhidè	shid át (but hárat)
3. șhidai, șhidaii, șhidei, șhide	şhidèn, şhidēèn

o. siman, siman, simen, sim	ie	șņiaen, șņidēen
Present, I st	rike, I am striking, etc	
Singular. Masculine.	Feminine.	PLUBAL. Common Gender.

Common Gender.	Common Gender.
2. shídè (but har, take thou away)	ṣḥidà, ṣḥid ⁱ à, ṣḥ id yà
3. shidot	$shid\~ot.$

The following are examples of the use of the above forms :-

Infinitive.

khōiki sachu hun, dōiki naro hun, to eat is easy, to give (i.e., to pay for it) is difficult.

jawāb dōiki dubālo to, màram, if he cannot give the answer, I will kill (him).

rōs ma-jo khujēgu thai àshpo gāch ginōiki bōm-à yā nē, he asked me whether I shall be able to buy your horse or not.

anu mõs pajū-jo âre khōik 'un, this meat is to be eaten without salt.

gūcho thaii tikī khōiki mat harām han, to eat your bread gratuitously (i.e., without making any return) is unlawful for me.

anu kômè-kār tus jèk thôiki thaii hīr han, what is your intention to do about this matter?

kachī-gīni jakur churūk thōiki, to cut the hair with seissors.

The state of the s

akhèr anu kōm tus thôik bè, as a rule you must do this.

anu khat-gè heri dāk-khānaèt viōik bash bo, having taken away this letter also, you should put it in the post-office.

We have seen that $b\bar{o}iki$ is used to mean 'to be able.' 'Not to be able 'is indicated by the verb $dub\bar{o}iki$. Thus:—

anu kōṭ ādè pēto hun mas banōik dubumus, this coat is so tight I cannot put it

Shēr Afzal bula doik dubēen, Sher Afzal cannot play polo.

anu waii achāk tāto han mas piōik dubumus, this water is so hot I cannot drink it.

The infinitive is declined, as in:

lōṣḥṭaièkèṭ bōla cḥakōikèṭè tu wāno nēi wāno, are you coming to watch the polo to-morrow?

è khèn mas dōikèt chak asulusus, at that time I was ready to give.

tu ma-kach wà hukam ginōikèt, come to me to get orders.

dōikè-ju chēi chhaku-ju fatu, three days after giving.

mas raioikė-jo gūcho, without I saying, i.e., without my instructions.

ro waioikèr būjė jak tsak uthilė, on his coming all stood up.

loètè ²fâl thōikè-kār çhēi shudārè derkāl han, three boys are required to throw up (i.e., to field) the balls (at tennis).

Apocopated Infinitive.

kè khèn tus tāk khō-sin màs àshpo lāmum, while you are eating bread, I will hold the horse.

tus raiō-sinèt mà nē parudunus ro uchuto, until you told (me), I haven't (i.e., hadn't) heard that he ran (i.e., had run) away.

anè dishèr baii mas ho thō-sinèt, stay in this place till I call.

Noun of Agency.

è khènèr mas doik asulusus, at that time I was on the point of giving (or 'prepared to give').

doik ro muun, the giver (i.e., the debtor) has died.

Present Participle.

 $a\phi \hbar u n d\dot{e}$ -kir $\phi h ak\bar{o}j\dot{e}$ \tilde{a} shè birès, a-looking down the hole, it (the horse) was shedding tears.

tu ino gù to, anu dūa raiōjè tom jamāata-wār ifū thè, when you go from here, repeating this prayer (i.e., spell) blow towards your wife.

rāati sūryo rõjè baiyen, he sits weeping night and day.

Conjunctive Participle or Past Participle Active.

wo Yūsut, chakē mai hālij jāk àtè, O Yūsuf, having looked take pity on my state.

taperzini-gini jèrè shish dē, having delivered a blow with an axe down on the old woman's head.

- mas chakum kyè thē maï rizèk nēi khyē 'Khudaiè khamis' thīn, I shall see why, not eating my daily food, she says 'I eat God's.'
- Jibrāil tom chandè-jo miṣḥṭè miṣḥṭè cḥhīlè nikhalē Yūsufèṭ banerèn, Gabriel, having taken fine clothes of various kinds out of his pocket, clothes Yūsuf.
- Khudā-ga Rasūlich tom jamāat hawāla thē nikhāan, consigning his wife to (the care of) God and the Prophet, he goes off.
- pôn fat thể abom nếi bo, having left the road, do not go across country.
- mas hai the, gye, ro jap lamīgàs, I, having done running (i.e., having run), having gone, seized him without warning.
- tus tom hièr niat thē, 'jakun bōt' thē, 'fū thē rèsè-wār, to jèk pashīgà to, pàshè, then, having made a prayer in your heart, having said 'may she become an ass,' make a puff towards her. Then you will see what you will see. The use of thē, as here, to mean 'having said,' or 'saying' is very common. So:—
- mas tut rēgasus, 'anu pfalaie tum āñ nē chuke' thē, I said to you, saying 'do not plant the apple-tree here,' i.e., I told you not to plant, etc.
- Haiabānsè Naniār-ga Janiār bè sāatī ginī, sōdāt jas bēin, Haiabān, having taken both Naniār and Janiār with him, set out for trading.
- aiyo manujèkèt ana mulaii hari dè, having taken this girl, give (her in marriage) to such a man.
- rèsè hatij lamī, having taken her by the hand.
- akhana rõs charūṭo pashī nēi lamīgun to, bōdo jakun han, if, having seen the thief he has not caught him, he is very much of an ass.
- dūban hilēlo-kach walē fat thènen, having brought the fire of 'ispandur' to the bridegroom, they put it down.
- bādshās chakēn, fakīrè-wār chakēi sūyēn, the king looks. Having looked towards (i.e., at) the faqīr, he recognizes (him).

Future and Present Subjunctive.

```
jèk tus bèchino to mas tut dam, I will give you what you want.
```

mas dam-à nēi dam-à, thai jèk kōm 'an, what business is it of yours whether I give or not?

mas dam bai, perhaps I shall give.

maï barào màrēguno, tèn mus tu kyè thē haram, you have just killed my husband, how am I now to marry you?

'kham' thē, hat àtēgo, saying 'I will eat,' he put out his hand (to the dish).

mas tu maram, I will kill you.

mas kyè the khacho kom tham, why should I do an evil thing?

mas kīl màroik talāsh tham, I shall make an attempt to kill an ibex.

anusè sā atī mas chāņum. I will send it with this person.

mas chakum kyè thê maï rizèk néi khyẽ 'Khudaiè khamis' thīn, I shall see why, not eating my daily food, she says 'I eat God's.'

mas akōt ginum (or harum), I will take it myself.

mas tu jūk-gīni ṣḥidum, I will beat you with a stick.

chakai to è kūyèr tamāsha thèenis, he finds that in that country they were holding sports.

jūkaii tōrè nikhalā to, bādshāè puçḥsè tom gerèṭ tsirai, get ye out stumps of wood, (and) the prince will split them up for his wedding.

chakaii to anu dawai jamāat perī asil, he sees (that) the dev's wife is a fairy.

Khudās sho dashtaii rī kōs háranis, God best knows who used to take them away. akhana rèsèt jèk bāwak derkāl han to, tu-jo bèchēi, if he wants anything, he will ask you for it.

ros tom di zerūr dei, he will certainly give his daughter.

thaï dishèr kōs kōm thēi, who will do the work in your place?

löshtaièkèt chār bashè löètè don, we shall strike balls (i.e., play tennis) to-morrow at four o'clock.

èk perda ganon, èsè fatu thaï jamāat baii tom chaga thōt, we shall fix up a curtain, and your wife will sit behind it and tell (lit. let her tell) her story.

kaisè shishich bèti to, bādshā ginon, on whosesoever head it (the hawk) may alight, him we shall take as king.

tu-ga dāsèţ hèrōn, you also we shall take to the desert.

anī paisa fash bil to, nēi jèk thôn, when this money is exhausted, then what shall we-do?

Khudaià-wārī buyèt thon, we shall make a petition to God.

yā muchho yā fatu rèsēi dushmanīs ro màrèn, sooner or later his enemies will kill him.

nèi rīno-sā tī birga thèn, they will do fighting (i.e., will fight) with them again. dōik-ro-ge ginōik-ro-gè baiya mukāmuk therè, ako-majā sā th thēen, bring the Debtor and the Creditor face to face, and they may make settlement (i.e., let them settle the matter) between themselves.

Present.

dashtamus zerùr thaï būṭ tser bēin, I know your boots will necessarily go to pieces.

do thè to, mas khamus, you prepare parched wheat, I eat (i.e., will eat) it.

anu àshpo mas bilkul khush nè thamus, I do not like this horse at all.

anu kom sichoiki-kar mas mash thamus, I am practising in order to learn this work.

mas thaï dī tōm pūchèt bèchumus, I want your daughter (as a wife) for my son.

mas anu nëi bèchumus, amà, kyè-to mutu nish, mas ginumus, I don't want this one, but, because there is no other, I take it.

achāk tutàn han, mas sabak raiōiki nēi pàshumus, it is so dark that I do not see to read.

mas chakum kyè thē mai rizèk nēi khyē, 'Khudaiè khamis' thīn, I shall see why, not eating my daily food, she says 'I (fem.) eat God's.'

jèk bèchèno to, bèch, ask for whatever you want.

jèkè nom khujèno, what are you asking the name of?

tus shinā thèèno, do you speak Shinā :

èsè-kār ako tsupush thèèno, for that reason you make yourself grieved (i.e., you are worried).

ko àshpo bèchino to, har, take whatever horse you want.

anusé hakèr jèk rāano, what do you say in regard to this?

bādshās rāan, 'nēyà, tus khidmat khātir miṣḥṭo thèeni,' 'not at all,' says the king, 'you serve me excellently.'

sugom dē-kir chakēen, he looks down through the smoke-hole.

bādshās èk dèzèkèr tom Mīr Wazīruṭ hukam dēen, one day the king gives orders to his Chief Viziers.

anus tom hyūo-gini kom thèen, he works with his heart (i.e., enthusiastically).

bādshās chakēn, fakīrè-wār chakēi, sūyēn, the king looks, having looked towards the fakir he recognizes him.

bujôikèr anī buṭōṭ kūlè dēn, on their going away, he gives grain to them all. kaman tom brag-dapar ganēn, he ties the noose round his waist.

shūo miṣḥṭo bō-sīn, waiī khabar ginēn takursè, by the time the boy is better, the barber, having come, takes news (i.e., inquires how he is).

o mushās rāan, 'mà Kanāanī,' thēn, the man says, 'I am a Canaanite,' says he. chīlè dujōikèt dubus sābun bèchin, the Dhōbī wants soap to wash the clothes with. akhana rōs ādè rāan to, khaltē rāan, if he says so he lies.

thai gōt kōs kurān rān to, tèshij nikhaii rōt, whoever recites the Qurān in your house, let him come up on the roof and recite it.

tikī dī-ga pūchè sā ti fàkīrèt chānīn, she sends food with (i.e., by the hands of) (her) daughter and son to the fakīr.

mās ako-wāro yā barōnuk yā rupaièk takurèt dīn, the mother gives to the barber from herself either a ring or a rupee.

rāani, 'wo Yūsuf, chakè, maï hālij jāk àtè,' thīn, she says, 'O Joseph, having looked, take pity on my state,' says she.

Zura Khātūnsè rāan, 'tu-jo mà *fatakī-à? tu-jo 'mà *sḥeiī-à?,' Zura Khatun says, 'am I balder than you? am I blinder than you?' (Here Zura Khātūn is a woman.)

anī jārè, kiri waiōkèr, dāsè-jo miṣḥṭè miṣḥṭè rfunarè walē, Yūsufèṭ dēenen, the brothers, on coming down, having brought fine flowers of many kinds with them from the country, give them to Joseph.

iraātak ai bāi shachè thèenen, round about they make the twelve figures.

èk gānèk fāltsīj gānenen, they tie one leg (of the old woman) to a poplar tree.

dūban hilēlo kach walè fat thènen, they bring the fire of 'ispandur' to the bridegroom, and put it down.

zūrī dānū sūrij vienen, they put the 'zūrī' pomegranates in the sun.

uskūnīs tom tom guṭè-jo ṭikī o mushāṭ walènen, the relations, each from his own house, bring food for that man.

In the above, note how in the verb $rai\bar{o}iki$, to say, the letter \bar{a} as the first vowel of the termination, as in $r\bar{a}ano$, thou sayest, $r\bar{a}an$ or $r\bar{a}n$, he says, $r\bar{a}ani$ or $r\bar{a}an$, she says, is drawlingly lengthened to $\bar{a}a$. This is not uncommon. In such cases, the a_1^2 may be part of the termination, thus, $r\bar{a}$ -ano, $r\bar{a}$ -ani, and so on. Similarly, from $kh\bar{o}iki$, to eat, we have:—

gati bë khaanen, they est together.

If the root contains a short vowel, and the stress accent falls upon it, the vowel is liable to be lengthened. Thus, from $gan\~oiki$, to fix, we have, above, $g\~anenen$, they tie or fix.

Imperfect.

akhana bula muchho dèes to, tèn kyin déen, if he used formerly to play polo, why does he not play now?

maï gumān bīn, rōs her chhak tōm hasīrèṭ èk rūpai dēis bai, it is my belief, he was probably giving (i.e., he may have been giving) a rupee a day to his ccok.

kōs tikī dīgī to, hēshèr nēi khās, if any (woman) gave him food, in his anxiety he was not eating (it).

akhana rās rèsèt zulem thèes to, mat kyin būyèt thēgo, if the Governor was doing oppression to him, why did he not make petition to me?

ana chaga thōikèr, rèsè jārès dārich kōn dēenis, while he was saying this, his brothers were giving ear at the door.

è kūyèr tamāsha thèenis, in that country they were holding festival.

fatu muchhō hai thèenis, they were running backwards and forwards.

Past.

mas akī pashīgas, I saw it myself.

balà mas pīnēgas èsè-jo anu àshpo mishto hun, this horse is better than the one I rode yesterday.

mas rèsèt rēgas tus rèsèt hukam dèi sik jèk kōm thōkun, I told him you would give him orders what to do.

mas rī du manujè chār pachār thēgas, I made (i.e., brought) the two men face to face.

mas jūk birachich trak thēgas, I made cut (i.e., I cut) the wood crossways.

gumān bin mas anu barālèt muchho tom mazūrī dēgas bai, I fincy that perhaps I gave this coolie his wages before.

națè degà to, abom nei wà, subom wà, if you dance don't move from left to right, but from right to left.

tus kiè ādè rēgà, why did you speak thus?

rèsè-jo khōjèn thè kiè anu kōm tus nēi thēgà, ask him, 'why did not you do this deed?'

'kham' the hat atego, saying 'I will eat,' he put out his hand.

ros ma-jo khujegu, he enquired from me.

rōs mat rēgu, he said to me.

aino-majā èksè rēgo, one among them said.

zhèk morè-kārţè mà raţēgo, maţ lèl nish, I do not know for what reason he stopped me.

anus anu kôm āsinaiyo thēgu, he did this deed by accident.

ros anu kom tom ikhtiar-ge thego, he did this on his own initiative.

chēisè tikī ādè khēgī oyanī parulī, the woman ate as if she were hungry.

Note kōs țikī dīgī to, hèṣḥèr nēi khās (imperfect), if any (woman) gave him food, in his anxiety he did not eat it. Here, according to the paradigm, we should expect dēgī.

ako-maja gash thēigès, we quarrelled among ourselves.

waleget to, maron, when ye have brought him, we shall put him to death.

herkhèn anu àshpij bula degè, whenever they played polo on this horse.

rīs ako-majā ger thēige, they quarrelled among themselves.

pōni-majā waiī, ako-majā sula thēigè, having gone (some way) on the road, they came to terms among themselves.

Perfect.

mas tom tumak rèsèt dēgunus, I have given him my rifle.

balà mas tut zhèk rēganus, what did I tell you yesterday?

tus 'dam' the deguno, saying 'I will strike,' you struck (i.e., you struck him intentionally).

tus o àshpèt du shal rupaiè dégàno, you have given two hundred rupees for that horse

maï barào tèn màrēguno, you have just now killed my husband.

derum maii ūṣḥ mat nēi dēgun, he has not vet given me what he owes me.

o manūjo ber-nāhak màrēgun, he has unjustifiably killed that man.

ōs o kōm akōṣḥa thēgun, he has done that deed of himself.

ros ma-sā tā ash duk boiki kāt thēgun, he has made promise to meet me to-day.

Pluprefect.

'mas dam' the, nè degasus, saying 'I will strike,' I had not struck him (i.e., I had not struck him intentionally).

è khènèr mai shak bul 'rèsèt mas mazūrī nēi dēgusus bai,' at that time my doubt occurred (that) perhaps I had not given to him the hire.

mas tut rēgasus, I had said to you.

pumūko mas ādè thēgasus, at first I had done thus.

akhana rõs è kūi ginõik bèchīgus, pār ginõik baii sik, if he had wanted to take the land, he could have taken (i.e., bought) it last year.

lõisè àshpè chōmè asbāb būṭè khēgīs, the (she-)fox had eaten all the leather work of the horse (i.e., the saddlery).

Future Perfect.

mas dē baièm, I shall have given.

mà nifaioikè-jo muchho zarūr Munshīs berālut mazūrī dē baiè, before I arrive the Munshī will certainly have given pay to the coolies.

Tense of Obligation.

mas barālèt mazūrī dōkunus, I have to give the coolie (his) pav.

tus degarei gach doiki hano (or dokano), ya ros doiki han (or dokun), you must give the price of the sheep, or he must give.

ros mat dokun, he has to give to me.

tu pashīgī to, rès-ga jādu thōik' 'in (or thōkin), when she saw (i.e., sees) you, she too will do magic.

anīs mat doiki hanè (or dokanè), they have to give to me.

The third person singular of this tense may also be used impersonally, as in :-

o manūjo balà wato, èk rūpai èsèt dōkun, it is necessary to give a rupec to the man who came yesterday.

àshpè sārpē ganākun, it is necessary to shoe the horse.

àshpè kūrè jīgè bīlèn, kūrè kerpa thōkun, the horse's hoofs have become long, it is necessary to cut them.

tèn buyèt nëi thökun, it is not proper to make a petition now.

anu kōm kè-zēligè thōkun, it is necessary to do this work somehow, i.e., this must be done somehow.

mas rèsèt rēgas tus rèsèt hukam dèi sik jèk kōm thōkun, I told him you would give him orders (as to) what is to be done.

anèsich kālo viōkun, it is necessary to put a patch on this (garment).

Imperative.

chakè, maï hālij jāk àtè, having looked, take pity on my state.

mèchè kir chakè, look under the table.

anu *falaiè tus āñ nè chukè, do not plant this apple-tree here.

kāgazī mèchich aji chhurè, put the papers down on the table.

matè zhèk tikī dè, give me some bread.

achāk bōdo nēi kamè, do not spend so much.

būtè bawè anu sandūkè-jo nikhalè, take everything out of this box.

tom shadèro-majnè-jo dū hushiār manūjè anu kōmich shè, put two intelligent men from among your servants on this job.

jap lami shidè, strike (him) without warning.

anu chèlèr sumè tèl shak thè, make this lamp (lit. in this lamp) full (with) kerosine.

tus gyē waii walè, do you, having gone, bring water, i.e., go and bring water.

The following are examples of verbs that omit the final \hat{e} in the second person singular imperative (see p. 352):—

jèk bichèno to, bich, ask for whatever you want.

anu kāguz Sāipè kach chān, send this letter to the Sāhib.

achāk gin, kachāk awājin to, take as much as may be necessary.

ko àshpo bèchino to, har, take whichever horse you want.

The following are examples of the second person plural:—-

anè rūpaiè tsōs ako-majā bagà (or samarà), divide these rupees among yourselves. herkhèn ro wato to, rèsèt tikī dèà, whenever he comes, give ye him food.

jūkaii torė nikhalà, get ye out stumps of wood.

Khān Sāipèt rà ma-kach waii, tell ye the Khān Sāhib to come to me.

maï hukamè-jo gūcho fat nè thèà, do not ye let him go without my orders.

anusè dijoikèt shon thèà, take ye care for its falling, i.e., that it does not fall.

maï shadèri thyà to, tsuṭ bōdi talab dam, serve ye me, (and) I will give you much pay.

o bādshāè pūrh walyà (or walà) to, màrōn, bring ye that king's son, and we shall kill him.

The following are examples of the third person: -

thaii gōṭ kōs kurōn rān to, tèshij nikhaii rōt, whoever (it may be that) recites the Qurān in your house, let him come up on to the roof and recite (it).

Khudās nēi thôt o āl nēi bôt, God grant he may not be there (lit. let God not do, let him not be there).

èk perda ganon, èsè fatu taï jamīat baii, tom chaga thōt, we shall fix up a curtain, and your wife will sit behind it, and (there) let her tell (her) story.

We have seen above (p. 351) that the Past, Perfect, and Pluperfect tenses are formed from an obsolete past participle ending in $-\bar{e}go$ or $-\bar{e}gu$, so that we get the forms $shid-\bar{e}gas$, I struck; $shid-\bar{e}ganus$, I have struck; and $shid-\bar{e}gasus$, I had struck. Rootaccented verbs (see p. 351), such as $chh\bar{i}n\bar{o}iki$, to cut, prefer, however, to substitute i for the e of the termination, so that we get forms such as $chh\bar{i}n-\bar{i}yas$, I cut, and so on. The following are the forms of these three tenses:—

Past, I cut, etc.

Singu	LAR.	PLURAL.
Masculine.	Feminine.	Common Gender.
1. chhīnīyas	$chhar{\imath}nar{\imath}gar{\imath}s$	c hhĩnĩgès
2. chhīnīgà	$chh {\it inig} \hat{e}$	chhīnīgèt
$oldsymbol{3}.$ $oldsymbol{c}hhar{\imath}nyar{oldsymbol{u}}oldsymbol{g}o$	$chh \bar{\imath} n \bar{\imath} g \bar{\imath}$	$chh \bar{\imath} n \bar{\imath} g \grave{e}$

Perfect, I have cut, etc.

1.	c hhīnīgunus	$chh \bar{\imath} n \bar{\imath} gin is$	$chh ar{\imath} n ar{\imath} g \grave{e} n \grave{e} s$
2.	$chh in ar{\imath} gun {f o}$	ch h ĩ nĩ ginế	chhīnīgèn è t
3.	$chh \bar{\imath} n \bar{\imath} gun$	$chh\bar{\imath}n\bar{\imath}gin$	chhini q è n

Similarly, the Pluperfect is chhinigasus, I had cut, and so on.

Some verbs, as will be seen from the following examples take either \tilde{e} or $\tilde{\iota}$ at option. Thus (p. 358), we have $d\tilde{\iota}gas$, as well as $d\tilde{e}gas$, thigas, as well as thegas, and so on.

shām bōsīnèṭ lōèṭè dīgas, I played tennis till evening.

mas rèsè zimà ginīgas, I went surety for him.

mas ro jap lamīgas, I seized him without warning.

mas ko lan bõikèr nëi pashīgās, I saw no one pass by.

tus thēgà è chōkij mas-ga thīgas, I did it in the same way that you did (it). Here we have the same verb with both ē and ī in the same sentence.

kèkhèn tus kōerè banīgà to, jas bōn, as soon as you (have) put on (your) boots, we shall start.

kèkhènè-jo tus ro pashīgà, bōdo jero bulun, since you saw him he has become very old.

kèkhèn tus kōm miṣḥṭuk thē nēi thīgà to, tnṭ tulab baski nēi tham, so long as you did (i.e., do) not work properly, I will not increase your wages. With thīgà, compare thēgà, a few lines above.

shudāro shākaj lamīgo, he laid hold of the boys' arm (i.e., the arm of each boy). kaikhèn rōs mà waiokèr pashīgo, tsak uthīlo, when he saw me coming he got up. akhana rōs anu kom nēi thīgu to, jēl-khānār chhivīà, if he does (lit. did) it again

(nēi), put ye him in prison.

kōs ṭikī dīgī to, hēṣèrḥ nēi khās (imperfect), if any (woman) gave him food, in his anxiety he did not eat it.

tu pashīgi to, rès-ga jādu thōik' 'in, when she sees (lit. saw) you, she also will do magic.

VOL. 1, PART 1

è chèisè sho thigi, the woman agreed (to become your wife).

tsos gūche-gūchèl Yūsufèt anu khacho mōr kyè thīgèt, why did you (plural) say this evil of Joseph without justification?

rè ako-sā ti herīgè, they took her with them.

mas èk manūjuk dāk-khānaèt chanīgunus, I have sent a man to the post-office.

è khènè-jo ane khèn bosinèt mas ro nëi pashigunus, from that time till now I have not seen him.

tus tom hatè-jo baièk asut tushār damijār thīgàno, you have given us as much trouble as you possibly could.

dēusè thaii dī kai-āpèr herīgun, maṭ pōn pashèrè, in whatever direction the demon has carried off your daughter, show me the way.

akhana rōs cherūto pashī nēi lamīgun to, bōdo jakun han, if, having seen the thief, he has not caught (him), he is a great ass.

kèkhèn ro gōun, anè khèn bōsin mat khat néi likhīgun, since he went away, he has not written a letter to me.

rīno-majā zid hin, kètobal rīs akō-majā jèkèk churi thīgèn, there is enmity between them, because they have committed some theft among each other.

akhana mas rèsèt ho thīgasus to, ro lōko ma-kach wai sik, if I had sent for him, he would have come at once.

mas 'bai' thigasus, I had said (i.e., I said some time ago) 'wait'.

anèsè-jo-gè khachakèt mà dīgaso to, nēi maï shukur asil. hadst thou given to me an even worse (man) than this, I should still (nēi) have been grateful (lit. there would still have been my thanks).

tèn tikī khīgaso, you had just eaten food.

yer tus ro pashīguso, tèn bōdo jero bulun, since you saw him (some time ago), he has grown very old.

The i-conjugation.

In the above examples, we have been dealing with certain root-accented transitive verbs that take an $\bar{\imath}$ in the tenses formed from the old past participle. There is another group of verbs which always take the letter $\bar{\imath}$ throughout all tenses. This group I call 'the $\bar{\imath}$ -conjugation.' Colonel Lorimer mentions the following verbs as belonging to this conjugation:—

chhivõiki or chhibõiki, to place, put down, keep (cf. Hindőstání rakhná). ōsīðiki, to fill into.

kalōiki, to abuse, to count.

unīōiki, to foster (give milk to) a child.

hal tuloiki, to assemble a plough, to make it ready for use.

The following is a conjugation of the leading forms of chhivoiki:-

Present Participle, chhiviojè, a-placing, placing.

Conjunctive Participle or Past Participle Active, chhivi, having placed. Future and Present Subjunctive, I shall place, I may place, etc.

	Singular.	Plural.
1.	chhivīum	chhivīun
2.	<i>chhivīè</i>	chhivièt
3.	c hhi v ;	ch h i v i è n

363

Present, I place, I am placing, etc.

	Masculine.	Feminine.	Common Gender.
1.	$c {m h} i v ar{\imath} u m u s$	$chhivar{\imath}amar{\imath}s$	chhivīun è s
2.	$chhiv$ i $\grave{e}no$	chhivīènè	ch hi vīunèt
3.	chhivièn	$chh\bar{\imath}v\bar{\imath}n$	chh i v i è ne n

Similarly, the Imperfect is chhiviusus, I was placing, etc.

Past, chhivīgas, I placed, etc., like chhīnīgas, above.

Perfect, chhivigunus, I have placed, like chhinigunus, above.

Pluperfect, chhivigasus, I had placed, like chhinigasus, above.

Imperative, chhivi, place thou; chhivià, place ye; chhiviòt, let him or them place.

I have noted the following examples of the use of verbs of this conjugation:—

mas ro akō-kach shaderīr chhivīum, I shall keep him near myself in service, i.e.,

I shall take him as a servant.

dī-ga pūch shikārè-jo muchhō shal hat chhivīun, we shall place the girl and the boy a hundred cubits in front of the tower.

tom muchhō chhivièn, he puts (it) down in front of himself.

èsè-aji shūo chhiviènen, they place the boy on the top of it.

rōs churī thē àṭītī gō" akō-kach chhivyūgo, he kept the stolen cow (lit. taken cow having done theft) in his possession.

anu dèger kyè thē unīgisè, how bad you (fem.) reared the goat? mèchè kir chhivī, put (it) under the table.

akhana ros anu kom nei thīgu to, jel-khānār chhivīà, if he does this thing again (nei), put ye (him) in prison.

C. The Intransitive Verb.—The conjugation of the Intransitive Verb differs from that of the Transitive Verb only in the tenses formed from the past participle. In the transitive verb these are based on an obsolete past participle ending in $-\bar{e}go$ or $-\bar{r}go$, which is added to the conjugational base obtained by rejecting the termination $-\bar{o}iki$ of the infinitive. Thus, from $shid-\bar{o}iki$, we get the old past participle $*shid-\bar{e}go$.

Intransitive verbs fall into two groups,—original and derivative. An example of an original intransitive verb is buj-ōiki, to go, of which the conjugational base is buj-. More often an intransitive verb is derivative, i.e., is derived from some transitive verb by the addition of the suffix -ij- or -ij- to the transitive conjugational base. Thus, from the transitive verb fer-ōiki, to turn (something) round, we have the derivative intransitive verb ferīj-ōiki or ferij-ōiki, to turn round, return. We shall see subsequently that this suffix -ij- or -ij- is also regularly used to form passive forms, and, in fact, it is sometimes difficult to say whether we are to look upon a given verb as merely intransitive or as passive. In the case of intransitive verbs, variants of the suffix -ij- or -ij- are -āj- or -aj-, -vj-, and -āch- or -ach-, but these are of comparatively rare occurrence, and do not seem to be used to form passive verbs. Examples are bilājōiki or bilajōiki, to melt; paruōi ki, to hear; and uchāchōiki or uchāchōiki, to arrive.

Original transitive verbs form the past participle by adding sometimes -to and sometimes -to to the conjugational base; but in making this addition there are many

irregularities. Especially, when the conjugational base ends in a consonant, this is generally idropped before -to. Thus, from $much-\bar{o}iki$, to escape, we have mu-to. Some verbs take only -to, others take only -to, and others take one or other without change of meaning. A few original verbs take -do instead of -to.

Derivative verbs change the j of -ij-, $-\bar{\alpha}j$ -, or -uj- to -do, and in several cases have -lo as well as -do. Thus, from $fcrij\bar{o}iki$, to turn round, we have ferido, and from $bitij\bar{c}iki$, to move, we have $bit\bar{i}do$ or $bit\bar{i}lo$. The few verbs with the suffix $-\bar{\alpha}ch$ -, change the ch to -to, as in $uch\bar{a}to$ from $uch\bar{a}ch\bar{o}iki$.

To illustrate the above remarks, I here give specimens of the formation of the past participles of various intransitive verbs:—

1. Original Intransitive Verbs, with Past Participles in -to or -do.

```
Past Participle.
            Infinitive.
                                                   muto or muchido.
  muchōiki, to escape.
  uchoiki, to run away.
                                                   uchuto or uchido.
                                                   dito.
  dijoiki, to fall.
  nikhaiõiki, to come out.
                                                   nikhāto.
                                                   wato.
  waioiki, to come.
2. Original Intransitive Verbs, with Past Participles in -lo.
  oiki, to come.
                                                   bulo or bigo.1
  bõiki, to become.
                                                   dubālo.
  dubi iki, to be unable.
                                                   jālo.
  jõiki, to be born.
                                                   polo.
  põiki, to make an appearance.
                                                   r\bar{o}lo.
  rōōiki, to weep.
3. Original Intransitive Verbs, with Past Participles in -to (-do) or -lo.
  uthi iki, to rise.
                                                    uthīdo or uthīlo.
                                                    chādī or chāli (feminine).
  chōiki, to be delivered (of a child).
  nifaiciki, to arrive.
                                                    nifāto or nifālo.
                                                    sichido or sichilo.
  sichōiki, to learn.
4. Derivative Intransitive Verbs.
   uchachōiki or uchāchōiki, to arrive.
                                                    nchato or nchāto.
                                                    chino.
   chīnījōiki, to be cut (of itself).
                                                    lañīdo.
   lanījoiki, to pass along, die.
   parujōiki or pàrujōiki, to hear.
                                                    parudo or pàrudo.
   shumijoiki, to be tired.
                                                    shumīlo.
   manupijoiki, to be skilled in.
                                                    manupido or manupilo.
5. The following are altogether irregular:—
   baióiki or bèóiki, to sit. remain.
                                                    baito or beto.
   \bar{a}m\bar{u}sh\bar{o}iki, to forget.
                                                    āmūto or āmushīlo.
   bujoiki, to go.
                                                    gou or gauu.
   mirjoiki er mirījoiki, to die.
                                                    m\bar{u}o.
   pachōiki or pajōiki, to ripen.
                                                    pako or pajido.
                 1 Note that this verb may also be conjugated as if it were transitive.
```

In all the above, the stress accent is on the syllable preceding the to, do, or to. Thus uchúto, dito, sīchido, dubálo.

The following verbs, though transitive in English, are in Shinā treated as intransitives: $-\bar{a}m\bar{u}sh\bar{o}iki$, to forget; $p\bar{a}ruj\bar{o}iki$, to hear; and $s\bar{i}ch\bar{o}iki$, to learn.

The personal terminations of the past tense of an intransitive verb, are not the same as those of the transitive. They differ in the first and second persons singular masculine. Thus:—

	Singular.			F	PLUBAL.
Masculine. Feminine.		Comm	non Gender.		
Transitive.	Intransitive.	Trans.	Intrans.	Trans.	Intrans.
1as	-us	$is, ar{\imath}s$	-is, īs	-ès	-ès
2à	-o	-è	-è	-èt	·èt
3u or -o	-u or -o	-7	2	•è	· -è

It will be observed that the intransitive terminations are the same as those of asus, the past tense of the verb substantive. The case is different with the Perfect and Pluperfect tenses. Both in transitive and in intransitive conjugations, these are compounds of the past participle with hanus and asus, respectively. The Intransitive conjugation is therefore, in these tenses, the same as the transitive conjugation.

It will be remembered that the subject of a transitive verb is put into the Agent case in $-s(\grave{e})$. This is not the case with intransitive verbs, the subject of which is put into the nominative.

In order to illustrate the formation of the tenses of an intransitive verb, I here give a sketch of the conjugation of the verb baiōiki, to sit:—

Future and Present Subjunctive. I shall sit, I may sit. baiam, etc., like shidam. Present, I sit, I am sitting. baiamus, etc., like shidamus.

Imperfect, I was sitting. baiamusus, etc., like shidamusus.

Past, I sat, etc.

SINGULAR		Pruban.
Masculine.	Feminine.	Common Gender.
1. bèţus	$b\grave{e}tis$	· bè!ès
2. bèţ o	<i>bè</i> <u>t</u> è	bèţèt
3. bėtu, bėto	bè ṭ ī	bèt è

Perfect. I have sat. bèțunus or bèțanus, etc., like shidēgunus, etc.
Pluperfect, I had sat. bèțasus or bètusus, etc., like shidēgasus, etc.
Future Perfect, I shall have sat. baiē baièm, etc., like shidē baièm. etc.
Tense of Obligation, I have to sit, etc. baiōkunus, etc., like shidōkunus, etc.
Imperative, sit thou, etc.

baiè or baii, sit thou.

baiù or baiyù, eit ye.

baiòt or baiyōt, baiut, ōaiyut, or bēōt, etc., let him or them sit.

The verb bujoiki, to go, is irregular in some of its forms. Thus:—Conjunctive Participle or Past Participle Active, $gy\bar{e}$, having gone.

Pa	et.	T	went.	etc.
1 71	3 h.	4	11 C LI U.	

1. $g\bar{a}s$	$oldsymbol{g} y \grave{e}^{\imath} s$	$gy ilde{c}^{\hat{\epsilon}} s$
$2. gar{a}$	$gy\grave{e}$	$goldsymbol{y}ar{oldsymbol{e}}^{ar{\epsilon}}t$
3. $g\bar{o}^u$, $g\bar{o}u$, $gauu$	gyei, gēi	$gy ar{e}^{m{i}}$

Perfect, I have gone, etc.

1.	$oldsymbol{g}ar{a}oldsymbol{n}us$	$gyar{e}$ 'n $\grave{e}s$	g y ē an è s
2.	$gar{a}no$	$g oldsymbol{y} \check{e}^{\imath} n \grave{e}$	gyēanèt
3.	gōun, gauàn	$g \bar{\imath} n$	gyēan

Pluperfect, I had gone, etc.

1.	$g ilde{a}sus$	gyē ⁱ sis	gyē ^s sas
2.	$g ilde{a} so$	gyē⁴s è	gyē ʾsè t
3.	$gar{o}us,\ gar{o}s$	$g \bar{\imath} s$	$gyar{e}^{\imath}s$

Imperative. bo, go thou. bà, bujà, go ye. bujōt, let him or them go.

The verb waioiki, to come, also presents difficulties in conjugation. The following are its principal forms:—

Conjunctive Participle or Past Participle Active, waii, having come. Future and Present Subjunctive, I shall come, I may come, etc.

	Singular.	Plural.
1.	$war{a}m$	w ōn
2.	$oldsymbol{w}ar{a},\ vclpha$	wāat
3.	waii	wāèn, wān

Present, I come, I am coming, etc.

SINGULAR.		Plurai.
Masculine.	Feminine.	Common Gender.
1. wāmus	wāmīs	$war{o}nas$
2. wāano, wāno	$war{a}in\grave{e}$	<i>vāanèt</i>
2. w āan, wān	wāīn, wāan'	wāanen

Imperfect, I was coming, etc.

1. wāmusus	wāmi s is	wõneses
2. wèiso	ıcèisè	$oldsymbol{w} ilde{a} es \grave{e} t$
3. wèis	neīs	w ānisè

Past, I came, etc.

watus, etc., like baitus.

Perfect, I have come, etc.

watunus, etc., like baitunus.

Pluperfect, I had come, etc.

watusus, etc., like baitusus.

Future Perfect, wait baiem, etc. I shall have come, etc. Tense of Obligation, waithunus, etc. I have to come, etc.

Imperative, wà, come thou, or, come ye. wōt, wàwōt, let him or them come.

The above are the forms used in Gilgiti Shinā. In Puniāli, a different verb is used, viz.:—

Infinitive, ōiki, to come.

Present Participle, ojè, a-coming, coming.

Conjunctive Participle or Past Participle Active, eii, having come.

Future and Present Subjunctive, I shall come, I may come, etc.

	Singular.	Plural.
1.	$\grave{e}m$	ōn
2.	èi	ēāt, āat, āt
3.	èi	$\grave{e}n$

Present, I come, I am coming, etc.

Singular.		PLURAL.
Masculine.	Feminine.	Common Gender.
1. āmus, èmvs	$\bar{a}mar{i}s$	õnàs
2. è no	èinè	ã 'n è t
3. è [*] n	$\grave{e}ar{\imath}n$	ènen

Imperfect, āmusus, etc., I was coming, etc.

Past, ālus, etc., I came, etc.

Perfect, ālunus, etc., I have come, etc.

Pluperfect, ālusus, etc., I had come, etc.

Future Perfect, eiī baièm, etc., I shall have come, etc.

Tense of Obligation, ōkunus, etc., I have to come, etc.

Imperative, \hat{e} , come thou. \hat{a} , come ye. $\hat{o}t$, let him or them come.

Although this verb is looked upon as Puniāli, the Past, Perfect, and Pluperfect are also heard in Gilgit.

The following are examples of the use of regular intransitive verbs:—

Infinitive.

kōiñ-èṭ tan baiōik bēino to āñ tsag bo, stay here as long as you are able to stay, (i.e. as long as you can).

shilõiki sababich mà sõiki dubumus, I am unable to sleep because of the aching. mà nifaiõikè-jo muçhhõ, before my arrival.

Giltèt bī-ga èk tārīkèr nifaiōikè-kār, in order to reach Gilgit on the 21st.

anu kōm sīchōiki-kār mas mash thamus, I am practising in order to learn this work. kōs baiōikèṭ dish nēi dèenen, no one gave (her) a place to sit down (i. e. a lodging). du bashōikèṭ, at striking two, i. e. at two o'clock.

agār nishōikèt taiār han, the fire is ready to go out.

ro o àshpich pīnōikèt bījèn, he is afraid to ride that horse.

chōiki asilī, she was about to be delivered (of a child).

Present Participle.

rāati sūryo rōjè baiyèn, he sits weeping night and day.

Conjunctive Participle.

kaikhèn ro uchachi (or nifaii) baitun, at what time he arrived (lit. having arrived), he sat down.

tèshij nikhaiī rōt. having come out on to the roof, let him recite.

āshinuiyo bat shēchī mūo, being struck accidentally by a stone, he died.

Future and Present Subjunctive.

loshtaiek bosinet uchāchum, I shall arrive tomorrow.

àshpè chijōtè kir baiam, I shall sit under the shade of the horse.

yā Chēchālèt bujum, yā Gizerèr baiyum, nēi mà māzēi panzmoi Junèt Giltèt nifaium, whether I go to Chitral or stay in Ghizer, I shall be back in Gilgit by the 15th of June.

mà Giltèr nifaièm bai, I may perhaps reach Gilgit. èsè fatu tai jamāat baii, thy wife will sit behind it.

Present.

rfasi-jo nēi bijumus, I am not afraid of hanging (i. e. being hanged.)

āpi āpi satār bashumus, I play the guitar a very little.

mà àsh bula chakōikèt bujōik dubumus, I cannot go to-day to watch polo.

mas banoik dubumus, I cannot put it (a coat) on.

anu kōm thōiki mà nēi parujumus, I do not hear (i. e. understand) how to do this work.

mà tên Shinā sīchumus, I am now learning Shinā.

uchāk gin kachāk awājin to, take as much as is necessary.

ai jago-jo o shūo dūr gyē baiyèn, the lad, going far away from those people, sits down.

bula doik dubēen, he cannot play polo.

ashmūo berīzhèr kūi būtèr kōnèr jèn, in the eighth year a famine appears (lit. is born) in all countries.

herkhèn anu àshpij bula dēgè to, kuḍījèn, whenever they have played polo on this horse, it goes lame.

Shātīrè Perī kūyèr nifaien, he arrives in Shātīra Perī's country.

hōshè-jo nikhāan, he becomes unconscious (lit. comes out of his senses).

ro mishto bē parujèn-à, does he hear well?

àshpo fatūt yaiyèn, the horse walks backwards.

o dasēi chupèr nifaiènen, they come to the edge of that plain.

We have feminine forms of the third person singular in :-

tsupush bē tom gōt baiīn. having become grieved, she sits in her own house.

èk küyèkèr nifain, she arrives in a certain country.

ponich yaiin, she proceeds along the road.

Imperfect.

gōtè-ju fatu baiès, he was sitting behind the house.

tumè kir sèès, he was sleeping under the tree.

Past.

anu kömich manupīdus, I am skilled in this work (manupījöiki).

zhèk tus raiītuk mà pàrudus, I have heard what you said (pàrujōiki. Raiītuk is past participle passive with the suffix k of unity) (see p. 373).

àsh balātèt ma-kach wà. Dubālo to, chèl bujèt wà, come to me this evening. If you cannot, come early tomorrow morning (dubŏiki).

kerè shumilo to, lukuk shū thè, if at any time you get tired, take a little rest (shumijōiki).

tus nëi raiō-sinèt mà në pàrudunus ro uchuto, until you told me. I haven't (i.e. hadn't) heard that he ran (i.e. had run) away (uchōiki).

kaikhèn rôs mà waiōikèr pashīgo, tsak uthīlo, when he saw me coming, he got up (uthōiki).

Haiabān, tom dī-pūcho-sā"tī, mā-mālo-sā"tī, tom guṭèr khushānīo-sā"tī baito, Haiàbān abode happily in his home with his children and parents (baiyōiki). jawāb dōiki dubālo, he could not give an answer (dubōiki).

tèshi ajonō kirtè dito, he fell down from the top of the roof (dijōiki).

ro tsago dapèr lanīdo, he passed through the garden (lanījōiki).

ro ma-jo muchho nifato, he arrived before me (nifaioiki).

junèk batè kiro nikhāto, a snake came out from under the ctone (nikhaiōiki).

mai $h\bar{\imath}r$ $p\bar{o}lo$, in my understanding it came into existence, i.e. I understood $(p\bar{o}iki)$. ($H\bar{\imath}r$ is locative I of $hy\bar{u}o$ or $h\bar{\imath}wo$, the heart, mind).

kèsai māk dīak è pōn dapèr waiī, pfut thē rōlo to, cherūṭo o han, if any one's mother or daughter come along that road, and, looking away from it (i.e. the suspended corpse), wept (i.e. weeps), that person is the thief (rōōiki).

kaisè shishich bètī to, bādshā ginōn, on whosesoever head she sat (i.e. the hawk may alight), him we shall take as king (baiyōiki).

ro waiōikèr būţè jak tsak uthīlè, on his coming all the people stood up (uthōiki).

Perfect.

rèsè nom mà āmūţunus, I have forgotten his name (āmūshōiki).

tus nēi raiō-sinèt mà nē parudunus ro uchuto, until you told me, I haven't (i.e. hadn't) heard that he had run away (parujōiki, uchōiki).

tu shumīluno to, datek shū thè, if you have become tired, rest a little (shumījōiki).

kaikhèn ro uçhatun baiţun, when he (has) arrived he (has) sat down (uçhachōiki, baiyōiki).

batè-'jī lèl ditun; gumān bīn kākas gala dito bulun, blood has fallen on the stone, (so) the partridge has probably been wounded (dijoiki, bōiki).

anèsè açḥhīur fuk pōlun, cataract has made its appearance on his eyes (i.e. he has cataract) (pōiki).

akhana ros Shinā sīchīlun to, kyin mori Shinā ros nēi thèen, if he has learnt Shinā, why does he never speak it : (sīchōiki).

chèi chālīn, mūlaièk jālīn, the woman has given birth, and a child has been born (i.e. the woman has given birth to a baby girl) (chōiki, jōiki).

anè bālī katārgī chhinītī, akī nēi chhīdīn, this rope was severed with a knife; it was not severed of itself. (chhīnōiki, to cut (transitive); chhīnījōiki, to become cut, to cut (intransitive). Chhīnīto is the past tense passive of chhīnōiki, while chhīdo is the past tense intransitive).

tèshij sugomich chūnè shudārè baiṭèn, small children have sat down (i.e. are seated) on the roof at the smoke-hole (baiyōiki).

Pluperfect.

kèkhèn mà āl baitusus, du manūjè hai thōjè wate, while I had sat down (i.e. was seated) there, two men came running up (baiyōiki).

kūt dapèr baitus, he had sat down (i.e. was seated) on the top of the wall (baiyōiki).

VOL. I, PART I.

Future and Present Subjunctive.

loshtaiek bosinet uchāchum, I shall arrive tomorrow.

ùshpè chijōtè kir baiam, I shall sit under the shade of the horse.

yā Chēchālèt bujum, yā Gizerèr baiyum, nēi mà māzēi panzmoi Junèt Giltèt nifaium, whether I go to Chitral or stay in Ghizer, I shall be back in Gilgit by the 15th of June.

mà Giltèr nifaièm bai, I may perhaps reach Gilgit.

èsè fatu tai jamāat baii, thy wife will sit behind it.

Present.

pfasi-jo nēi bijumus, I am not afraid of hanging (i. e. being hanged.)

āpi āpi satār bashumus, I play the guitar a very little.

mà àsh bula chakoikèt bujoik dubumus, I cannot go to-day to watch polo.

mas banoik dubumus, I cannot put it (a coat) on.

anu kōm thōiki mà nēi parujumus, I do not hear (i. e. understand) how to do this work.

mà tēn Ṣhiṇā sīchumus, I am now learning Ṣhiṇā.

achāk gin kachāk awājin to, take as much as is necessary.

ai jago-jo o shūo dūr gyē baiyèn, the lad, going far away from those people, sits down.

bula dõik dubēen, he cannot play polo.

ashmūo berīzhèr kūi būtèr kōnèr jèn, in the eighth year a famine appears (lit. is born) in all countries.

herkhèn anu àshpij bula dēgè to, kuḍījèn, whenever they have played polo on this horse, it goes lame.

Shātīrè Perī kūyèr nifaien, he arrives in Shātīra Perī's country.

hōshè-jo nikhāan, he becomes unconscious (lit. comes out of his senses).

ro mishto bë parujèn-à, does he hear well?

àshpo fatūt yaiyèn, the horse walks backwards.

o dāsēi chupèr nifaiènen, they come to the edge of that plain.

We have feminine forms of the third person singular in :-

tsupush bē tom gōt baiīn, having become grieved, she sits in her own house.

èk küyèkèr nifuiin, she arrives in a certain country.

ponich yaiin, she proceeds along the road.

Imperfect.

göte-ju futu baies, he was sitting behind the house.

tumè kir sèès, he was sleeping under the tree.

Past.

anu kömich manupīdus, I am skilled in this work (manupījöiki).

zhèk tus raiîtuk mù pàrudus, I have heard what you said (pàrujōiki. Raiĩtuk is past participle passive with the suffix k of unity) (see p. 373).

àsh balātèt ma-kach wà. Dubālo to, chèl bujèt wà. come to me this evening. If you cannot, come early tomorrow morning (dubōiki).

Pluperfect.

kèkhèn mà āl baiṭusus, du manū jè hai thōjè wate, while I had sat down (i.e. was seated) there, two men came running up (baiyōiki).

kūt dapèr baitus, he had sat down (i.e. was seated) on the top of the wall (baiyōiki).

VOL. I, PART I.

shudār asul, īn shumīlus nīr aṭēn, he was (only) a boy, and so he had become tired and fell asleep (shumījōiki).

konkoro thè baitès, they had sat down (i.e. were seated) round about (baiyōiki).

Imperative.

tu ān baii ro nēi waiō-sinèt, sit down (i.e. remain) here till he comes.

ajèt nikhà, elimb up (nikhaiōiki).

lõko uchà, flee ye at once (uchōiki).

dāmadā baiyà, sit ye down round about.

rèsèt rà, koiñ han, āl bēyut, tell him to stay where he is (lit. where he is, there let him sit down).

maii jèk perwa nish yā ro miriōt yā jōno muchōt, I do not care whether he lives or dies (lit. either let him die, or let him escape alive).

The following are examples of the use of some irregular intransitive verbs:-

1. bujoiki, to go.

anèsè bujoikèt rak nish, he does not intend to go.

ai jago-jo o shuo dur gye baiyèn, the lad, having gone far from those people, sits down.

bujoikèr ani butot kūlè den, on (their) going away, he gives them all grain.

na ro rukhsatij bujoik bēen, na tu, neither you nor he can go on leave.

derum nëi bujō-sin tu ma-kach wà hukam ginōikèt, before you start (lit. up to your not starting) come to me to get an order.

mà akī bujum, I shall go myself.

akhana ro āñ asul to, rojèr bujè sik, if he were here, he would be very angry (lit. he would go into anger).

mà-ga tu bon, you and I shall go.

tu Giltèt bujèno-à ? awa, Giltèt bujumus, are you going to Gilgit? yes, I am going to Gilgit.

dēo akōṭ. jèk khōik-kār, jèlèṭ bujèn, the Dev goes off by himself to the jungle to get something to eat.

kachāk dèzè-jo Zulēkha zindānèţ bujīn, in the course of a few days, Zulaikha goes to the prison.

chār būtès, cherūtè mōr-ginī, zḥataièr āru bujènen, at the thief's saying, all the four get into the bag.

Mir Saip Nagirei ma-kach wato; nei to mà tènisèt bujumusus, the Mir of Nagir came to see me; otherwise, I would have gone [note the use of the imperfect] to (play) tennis.

chukaii bujčiso, you were going uphill.

bichčikèt gas, I went off to beg.

tu ino gà to, ann dūa raiōje tom jamāatè-wār *fū thè, when you go (lit. went from here, repeating this spell, blow towards your wife.

ro ako-shā $g\tilde{o}^*$, he went off of his own will (i.e. without permission).

dūt pūchēi aiar gou, the milk went into the boy's mouth.

silet gavu, he went for a walk.

paisa būṭī waii mukhij gēi, all the money (fem.) went on the face of the waters (i.e. was wasted).

mà Gilīt nifaiōikè-jo muchho ro gōun bai, he may have left before I reach Gilgit.

wēa-kār gōun (or gauan), he has gone for water.

akhana ro chhūt bul to, mà gyễ baièm, if he comes late, I shall have gone.

pon fat the abom nei bo, having left the road, do not go across country.

y er ba, go ye on forward.

chār būtè zhataièr ārū bujà, all four of you go inside into the bag (i.e. get into it).

yā ro Chilāsèt bujōt yā ro Giltè bēyot, yā muchho yā fàtu rèsēt dushmanīs ro màrèn, let him go to Chilās or let him stay in Gilgit (i.e. whether he goes or stays), sooner or later his enemies will murder him.

2. mirījoiki, or mirjoiki, to die.

akhana ro mirijè to, rèsè pūch, rèsè dishèr Rā baii sik, if he were to die, his son would become Rājā in his place.

bēshak ro mirījēi, of course he will die.

'mas dam' the nè degasus; āshinaiyo baṭ ṣḥèchī mūo, I had not struck (him) saying 'I will strike' (i.e. intentionally); accidentally being hit by a stone he died.

doik ro muun, the giver (or debtor) has died.

maț lèl nish ro mūun-à, jōno han, I do not know whether he is dead or alive (lit. 'has he died ?, is alive ?').

akhana mūus to, rèsè pựch rèsè dishèr Rā baii sik, if he had died, his son would have become Rājā in his place.

akhana ro ō chhārè-jo nere gōun to, èkhènèr-akī mūus bai, if he has fallen from that cliff, he must have died on the spot.

3. waiōiki and ōiki, to come.

ani jārè, kiri waiöikèr, dāsè-jo miṣḥṭi miṣḥṭi pfunarè walē, Yūsufèṭ dēènen, the brothers, on coming down, having brought fine flowers of many kinds from the country, give them to Joseph.

ārū waioikè-ju muchhō dārè-'ji dan dan thè, before coming in knock at the door.

mà Chilasèt waiō-sin than guman bīn ro aiakèr Giltèt nifaii bai, by the time I arrive at Chilas, he will probably in the meantime reach Gilgit.

derij waii kirțè ho thin, coming to the window she calls down.

lōṣḥṭai tū-kach wām, I shall come to you tomorrow.

tu an baii ro nei waio-sinèt. Ro loko waii, you will remain here till he comes (lit. up to the time he does not come). He will come soon.

bè rèsè merākèt kyè-bē won, why should we come to his court?

tu shabāk āñ baii, mà firijī wāmus, you will sit here a little, I am coming back (i.e. stay here, I shall return).

tu ma-sāati wāano, yā nē, are you coming with me or not?

tu herchhak ma-kach wāno, you are always coming to me.

rīno fatu rōs-ga hai thē gōṭ wān, he too, running after them, comes to the house.

dashtamus anus hai thégun, anèséi hīṣḥ (fem.) wāùni, he looks as if he had run, he is breathing so (lit. I know he has done running, his panting comes).

Astorijè Giltèt waanen kuto haroikè-kar, the Astoris come to Gilgit to buy grain.

lôshṭaièk tu wato to, mas tūṭ èk rūpai damus bai, if you come (lit. came) to-morrow, perhaps I shall give (lit. am giving) you a rupee.

o manujo balà wato, èk rūpai èsèt dōkun, give a rupee to the man who came yesterday (lit. the man came yesterday, to him a rupee is to be given).

tūṭ damijār (fem.) watī to, anu ¹furgo dai, if trouble comes (lit. came) to you, burn this feather.

kèkhèn mà āl baitusus, du manūjè hai thō-'jè watè, while I was seated there, two men came running up.

tu àsh watuno? nè, balà watunus. have you come to-day? no, I have come yesterday.

ros buyèt thoikèt watun, he has come to make a petition.

akhana rèsēi ṣḥāl (fem.) watin to, rèsèt kwinēn dè, if he gets fever (lit. if his fever has come), give him quinine.

àsh rājī būtè Gilīt der watèn, to-day all the rājās have come into Gilgit.

mà gè anèsè-kār watusus, I too had come for this purpose.

kèsèt lèl nush, ro koño watus, ro koiñtè go", no one knows (lit. to any one it is not known) whence he came (lit. had come), or whither he went.

har dèz gōu ma-kach waiōkun, every day (lit. every day went) you must come to me.

àsh balātè! ma-kach wà; dubālo to, chèl bujèt wà, come to me this evening; if you can't, then come early to-morrow morning.

būṭè nalā ma-kùch wà, all come to me together.

rèsèt khabar thè, ma-kach wōt, tell him to come to me.

ro-ga wàwōt, let him also come.

ājo wàwōt, yā nè wàwōt, mà zerūr derūt bujum, whether it rains or not (lit. let rain come or let it not come), I am certainly going out.

ajonō āshinaiyo èk baṭèk ālo, suddenly a stone came down from above. shishak-gini fakīrèk ālun, a faqīr has come with (i.e. carrying) a head.

D. The Passive Voice.—A transitive verb may be put into the Passive Voice by adding -ij- or -ij- to the root. Thus, $shid\bar{o}iki$, to strike, $shidij\bar{o}iki$, to be struck. The employment of -ij- or -ij- depends on the stress accent. For instance, in $shidij\bar{o}iki$ the accent is on the \bar{o} , and therefore we have -ij-, with the i short, but in shidijum. I shall be struck, the accent is on the -ij-, and therefore we have the \bar{i} long. The passive verb so obtained is then conjugated like a derivative intransitive verb in $-ij\bar{o}iki$. It thus occurs that it is often difficult to say whether a given verb in $-ij\bar{o}iki$ is intransitive or passive. In a few verbs there is, however, a difference of form. Colonel Lorimer gives the following:—

```
mirōiki, mirjōiki, or mirījōiki, to die.
marōiki, to kill (causal).
marijōiki, to be killed (passive of causal).
nikhaiōiki, to get out of.
nikhalōiki, to turn out, extract (causal).
nikalijōiki, to be turned out, extracted, etc. (passive of causal).
```

The verb chhēnoiki, to cut, has chhīnijoiki both for its intransitive (to cut, become

cut of itself) and for its passive (to be cut by some one) forms, but these differ in the past participle. Thus:—

```
chhīnījèn, cuts (of itself) (intr.), or it is being cut (by some one) (pass.). chhīdo, it cut (of itself), it broke (intr.). chhīnīto, it was cut (by some one) (pass.).
```

We have seen (p. 364) that most intransitive verbs in $-ij\bar{o}iki$ form the past participle in -do. Thus, $ferij\bar{o}iki$, to turn round, has ferido. Passive verbs generally form their past participles in -to, not -do, as in $chh\bar{i}n\bar{i}to$, above, but the termination -do is sometimes used.

The past participle is frequently used as a simple adjective, as in $chh\bar{i}n\bar{i}t\bar{i}\;bal\bar{i}$, the cut rope. When the -to of the past participle is changed to -tuk (i.e. with the suffix of unity added), the word becomes a substantive, as in $th\bar{i}tuk$ (from $th\bar{o}iki$), a (or the) thing done, an act; $rai\bar{i}tuk$, a (or the) thing said, an injunction.

As in Indian languages, the use of the passive voice is rare, and the only examples that I have noted are all in tenses for med from the past participle, although I know of no prohibition to the use of the other tenses. The following is a list of passive forms that have been noted by me:—

ACTIVE.	Passive.		
	Infinitive.	Past participle.	
chhīnōiki, to cut (something).	chhīnijõiki	$chh\bar{\imath}n\bar{\imath}to$	
dõiki, to give, to strike.	dijõ iki	$dar{\imath} to$	
raiōiki, to say.	raiijõiki	· raiīto	
shidoiki, to strike.	șķidijōiki	șķidīto	
thôiki, to do, make.	thijõiki	$th\bar{\imath}to$	
kamõiki, to spend.	$kamij \delta iki$	kamido	
màrðiki, to kill.	màrijõiki	murido	
<i>pālōiki</i> , to rub on.	palijōiki	palido	

The following are examples of the use of these passive verbs in tenses formed from the past participle:—

- anè bālī katār-gī chhīnītī, aki nēi chhīdīn, this rope was cut with a knife; it did not cut (i.e., break) of itself.
- o gala dīto parulo bē yaiyen, he walks as if he were wounded (lit. being like a wounded person).
- ro Mīr Sāipè shadarè hatè-jo turi-gīni shidītun, he has been beaten by the Mīr Sāhib's servant with a whip. Here we have an example of the rul- that when a personal agent is expressed in connexion with a passive verb, this is done by the aid of the phrase 'hatè-jo', by the hand of.
- Mir Sāip tom shadarê zhèk thītuj $(=thīto + ajè)^p$ fitīk bul, the Mīr Sāhib was displeased at something which his servant had done (lit. displeased ou something done of the servant).
- achāk bodo kamoiki nē asul. Mas jèk tham? Guţè-kār kamīdo, you should not have spent so much. What am I to do? It was expended for the house (hold).
- ro dīņu-yī marīdo, he was killed by a bullet.

koeri-'j tōk palīdun, (your) boots are muddy (lit. mud is smeared on the boots). zhèk tus raiītuk mà parudus, I have heard what you say. Note here that tus is in the agent case, although raiītuk is passive. This is the rule in such cases. Khudaiè shukur thaii thītuk, thanks be Thine, O God, for what Thou hast done. Here, by an alternative idiom, thaii is in the genitive.

E. The Causal Voice.—A causal verb is made by adding the syllable er or ar (or, when the accent falls on it, èr) to the root of the primary verb. If the root ends in a vowel, the contiguous vowels usually coalesce, but the typical r remains unchanged. If the primary verb is intransitive, the causal formed from it is usually an active causal, as in nikhaiōiki, to come out, causal nikhairōiki, to cause to come out, to take out. If the primary verb is transitive, the causal usually implies the passive of the primary verb, as in màrōiki, to kill, causal màrarōiki, to cause to be killed, to have killed. There are, as in India, some irregular causals. One of these is màrōiki, to kill, just mentioned, which, itself is the causal of mirōiki, to die. Another is nikhaiōiki, to emerge, causal nikhalōiki, to extract, beside nikhairōiki, to cause to emerge. Nikhalōiki has, itself, a double causal nikhalerōiki, to cause to be extracted. I have no record of other irregular causals, but they probably exist.

In some cases double causals may be formed by doubling the -èr-. Colonel Lorimer gives the following example:—

pachōiki, to ripen, to be in the process of being cooked, to cook (intr.). causal pacherōiki, to cook (something), as in tus tèn tikī pachèrè, cook some food now.

double causal pachereroiki, to cause to be cooked, as in tus tèn țiki tom shaderè hatè-jo pachèrerè, have some food now cooked by your servant.

The following are examples of causal verbs:-

Primary verb.

banōiki, to clothe (oneself).

chèloiki, to proceed.

dõiki, to give.
ganõiki, to fix.
ginõiki to take, buy.
kuḍijōiki, to be lame.
khōiki, to eat.

mirōiki, to die.
marōiki, to kill.
nikhaiōiki, to emerge.
nikhalōiki, to extract.
pīōiki, to drink.

rashôiki, to see.
raiôiki, to say, to recite.

Causal verb

banerōiki, to put (clothes on another person).

chèleroiki, to cause to proceed, to carry on (affairs).

derōiki, to cause to be given, to put.

ganerõiki, to cause to be fixed.
ginerõiki, to cause to be bought.

kuderõiki, to lame.

khaierōiki, to give (food) to be eaten, to feed,

màrōiki, to kill.

màraroiki, to cause to be killed.

nikhairõiki, to cause to emerge.

nikhaleroiki, to cause to be extracted.

pieroiki, to give to be drunk, to give to

pasherōiki, to cause to be seen, to show. rēirōiki, to cause to be said, to cause to be recited.

sīōiki, to sew. shidōiki, to strike. thōiki, to do. walōiki, to bring. sierčiki, to get sewn.
shiderčiki, to have (a person) beaten.
therčiki, to cause to be done.
walerčiki, to cause to be brought, to obtain.

The following are examples of the use of these causal verbs:—

- Jibrāīl tom chandè-jo miṣḥṭè miṣḥṭè cḥhīlè nikhalē, Yusufèṭ banerēn, Gabriel, having taken fine clothes of various kinds from his pocket, puts (them) on Joseph.
- anī ashrafīè ginī anè jerīs tom guṭēi kom miṣḥṭuk thē chèlerīn, taking the ashrafīs, the old woman carries on the affairs of her house well.
- tèn lõilyo àshpich tīlèn derõkun, now the saddle is to be put on the red horse (i.e. have the red horse saddled now).
- anèsè-jo fatu mas tom àshpo sārpè gànerum, in future I shall have shoes fixed on my horse (i.e. I shall have him shod).
- anī khachī bām mat ginerēguno, you have made this worthless mare bought to me (i.e., you have made me buy it).
- anu àshpo tus kuderēguno, you have lamed this horse.
- yèr the àshpèt waii pierè, fatu baspūr khaierè, first make water to be drunk to the horse, afterwards make grain to be eaten to it (i.e. first water the horse, then feed it).
- ros Mīr Sāipè shadarè hatè-jo tumakè dīḍū-gī (or dīrū-gī) ako màrarēgo, he has had himself killed with a gun-bullet by the Mīr Sāhib's servant.
- ro mas tom tsagè-jo nikhairum, I will make him get out of my garden.
- ro mas tom tsagè-jo nikhalerum, I will have him removed from my garden.
- àshpo cho the, heri sinich, mas tut waii pieram, gallop your horse, bringing it to the river, and I will give you water to drink.
- rèsèt pasherè anu kōm zhèk chukuj thèn to thēi, show him how to do this job (lit. show him how one does it, so that he may do it).
- chuno barot suncho hiwo-gi kalima rēirènen, they cause to young and old the creed to be recited with a sincere heart (i.e. they made young and old recite it).
- mas akō-kār chhīlè derzīè hatè-jo sīerumus, I am having clothes sewn for myself by the tailor.
- akhana tus anu kom thegà to, màs tu kūri shiderum, it you do this, I will have you severely beaten.
- tus tom hatè-jo baièk asul tushār damijār therēguno, you have caused me as much trouble as possible.
- cherūţus ajōni chèlak-gì mà sharminda therēgo, the thief (has) caused me (to be) ashamed (i.e. has put me to shame) by an extraordinary trick.
- mas tèn-akī è chèi tūṭ shō theram, I shall now at once get that woman to accept you.
- ma-kār Kashyārè-jo rōs èk miṣḥṭo àshpo walerēgun, he has had brought (i.e. obtained) a good horse for me from Kashgar.

V. INDECLINABLES.—The negative particle is $n\hat{e}$, $n\hat{e}$, $n\hat{e}i$, or $n\hat{e}i$, not. It may also be used to mean 'is not', as in and mail $d\bar{i}$ $n\hat{e}$, this is not my daughter. The same words are used to mean 'no'. A stronger negative is $n\hat{e}ya$, not at all, or 'O, no'. 'Yes' is awa. 'Neither . . . nor' is na . . . na.

The word for 'and' or 'both . . . and' is ga or $g\grave{e}$. It is used enclitically after the first of the conjoined members, and may be repeated after the second. Colonel Lorimer gives as examples :— $m\grave{a}$ -ga tu $b\~{o}n$, I and you shall go; $m\grave{a}$ -ga ro-ga baiy \grave{a} b $\~{o}n$, both I and he shall go. The same word is also used with the meaning of 'and also' 'too' as in $k\~{o}$ no ashpo wal \grave{e} , $b\~{o}$ ilo-ga wal \grave{e} , bring the black horse, and also bring the bay.

We have seen above (p. 351) that when the particle \dot{a} is appended to the future tense of a verb, it gives it a subjunctive force. This particle is also employed to indicate direct interrogation, when there is no definite interrogative word in the sentence. In this case it is usually appended to the last word in the sentence, which is generally the verb, as in tu Giltèt bujèno- \dot{a} , are you going to Gilgit? If there is an alternative, it is usually appended only to the first element, as in ro watun- \dot{a} , nei watun, has he come or not?

The particle to is of very frequent occurrence in Shinā, and is, I believe, the same as the termination -ta of the polite present imperative of Kāshmīrī, as in wuchh-ta, please to see, or, as we should say in English 'just see'. In Shina it is put at the end of the phrase, i.e. generally immediately after the verb, and its effect seems to be to give a slight element of hesitation or doubt to the whole clause. Thus, and paisa fash bil to, nëi jèk thon, (when) this money became (i.e. is) expended, then what shall we do? Note that to does not here mean 'then', as we might think from the analogy of Hindi. That word is supplied by $n\tilde{e}i$, which is here an adverb of time with that meaning. The to belongs to the first clause, and here really means 'when', with the additional idea of uncertainty as to how long the money will last. Or, again, it may, like the English suffix '-ever' be employed to give an indefinite force to an interrogative pronoun, as in mà kõs puida thēgun to, o Dabonsè mat rizek dēn, whoever has created me, that Lord gives me my daily food. But to most often occurs in the protasis, or if-clause, of a conditional sentence, the word 'if' being indicated at the beginning of the clause by akhana. Thus, akhana ros ādè rāan to, khaltē rāan, if he speaks so, he lies. Sometimes akhana is omitted. and the whole burden of the 'if' is thrown upon the to, as in oyano hano to, tūt khurma bodo vium, if you are hungry, I will throw down lots of dates for you.

If the conditional sentence is such a one as we would require the use of 'would' or 'would have' in English, the word sik is appended to the apodosis, or then-clause, as in $a\underline{kh}ana$ ro $m\bar{u}o$ to, $r\dot{e}s\dot{e}$ $p\bar{u}\dot{c}h$ $r\dot{e}s\dot{e}$ $dish\dot{e}r$ $R\bar{a}$ baii sik, if he died, his son would become Rājā in his place. Or again, $a\underline{kh}ana$ $m\bar{u}us$ (sik) to, $r\dot{e}s\dot{e}$ $p\bar{u}\dot{c}h$ $r\dot{e}s\dot{e}$ $dish\dot{e}r$ $R\bar{a}$ baii sik, if he had died, his son would have become Rājā in his place. As in the last example, sik may sometimes also be optionally inserted in the protasis, without affecting the meaning.

From several of the above examples, it may be noted that there is a marked tendency in Shinā to put the verb of the protasis in the past indicative, where we, in English, should use the present indicative or the phrase 'were to' or the auxiliary 'should'.

Sometimes, but much more rarely, to is used, as in Hindi, to introduce a new article in a sequence. In such cases it begins, not concludes a clause, and may be translated, as in Hindi by 'then'. Thus:—

fat chūpèr bādshās 'Khudaiya, anè kachèrèk bōt', thē, dam dēn; to aiāko-majā bādshāè jamāat āṅ-aṅ thē kachèrè bīn, finally, the king saying 'O God, may this woman become a mule', blows (towards her); then, on this (or 'thereupon', aiāko-majā), the king's wife, saying 'hee-haw', becomes a mule.

I owe the following version of the Parable of the Prodigal Son into Shinā, to the kindness of Colonel Lorimer. It was made by Sarfarāz, son of Bakhtawār, a Kachatei Yashkun of Gilgit, and was revised by Colonel Lorimer. Attention must be drawn to the laxity in regard to vowel sounds, to which, especially in the conjugation of verbs, reference has been made on p. 352 ante. In several instances, the spelling of declensional and conjugational forms in this specimen will be found to differ slightly from those given in the preceding pages. There is, however, nothing which need cause difficulty.

VOLUME X.

Page 123, line 8.—In the Addenda to Volume VIII, Part ii (ante, p. 247), I have expressed my gratitude to Dr. Morgenstierne for much information there given regarding the more western Dardiz languages. In Volume X I have given a pretty full account of the Örmurī language as spoken at Kaniguram in Wazīristān. On page 123, speaking of other localities in which that language might be expected to be found, I said 'In the Logar Valley, in some villages, the Örmurs speak Persian, while in others,—Leech mentions the village of Barak,—they have retained their own form of speech.' Leech was writing nearly a century ago, and since then no further information has been received about Örmurī in Afghanistan proper. This want has now also been filled by Dr. Morgenstierne, who has added to his previous kindness by sending me the following information collected by him during his stay in Kābul. He also sends me a note on Parāchī, an allied language also spoken in Afghanistan. He writes as follows:—

ORMURI OF LOGAR.

At the present day Ōrmurī is spoken by only a few people of the older generation at Barakī Barak in the Logar Valley. At Butkhāk (some miles east of Kābul) there are people who belong to the Ōrmur tribe; but they have given up their native language and speak Paṣḥtō.

The Örmuri of Logar preserves a palatal \underline{sh} in many cases where the dialect of Kanigrām [i.e. Kaniguram] has s; but on the other hand it makes no distinction between \underline{sh} and \underline{sh} . The complicated system of verbal stems has been such simplified, and the vocabulary has undergone a strong Pārsi influence.

The First Sentences of the Parable in Ormuri of Logar.

būk. Ta-shē sarai do klàn Afō zärī klānak ta-khūy рē kī Of-one man twosons were. The younger boyof-himself father to ghōk, 'ai tar-tū ta-mâl artsa takhsim tar-mun bu-sē, ku-mun ki said, 'O father, of-thee of-property whatever of-me is, to-mear-shēr.' A sarai ta-khūy ta-klàn minzi-ne ta-khūy a mâl đō takhsim give.' The man of-himself of-sons middle-to of-himself the property two parts dâk. Tsond rosh ta-khúy pēts zärī klân ta-khūy a a made. Some days afterwards of himself the younger son of-himself the property dâk; pēts râi-nē ai-tsawok, pēts jâi-nē al-tsawök. collected made; then road-to he-went, then a-place-to he-went.

In the above, the letter \hat{a} is sounded as a deep \bar{a} like the Swedish long a.

PARACHI.

This language is mentioned by Bābur ('Memoirs', p. 225, Leyden's and Erskine's trans., ed. King), and Masson ('Narrative of various journeys in Baluchistan, Afghanistan, and the Punjab'). It is spoken in Ghujulān in Dārre-i-ghosh in Nijrau, vol. 1, Part 1.

in Pachaghān in Tagau, and, with some dialectic difference in the Shutul Valley north of Gulbahār, where the people are said to have come from Nijrau. Formerly it is said to have been in use in Panjshīr, and the name of the village Parachi in the Paghmān Hills, west of Kābul, may indicate that the tribe was also once settled there.

Like Örmurī, with which language it presents some striking similarities, it shows some 'West-Iranian' features; but it is also closely connected with Minjānī [the 'Munjānī' of the Survey] and the Pāmīr dialects. I hope to be able to demonstrate that neither Örmurī nor Parāchī are recent immigrants from Western Iran, but are the remnants of the old Iranian languages spoken in Eastern Afghanistan before the advent of the 'Sakic' Paṣḥtō language.

Parāchī has been very deeply influenced by Pashaī, not only in its vocabulary, but also in its morphology and phonology. Especially striking is the adoption of aspirates, not only in loanwords, but even in original Parāchī words, through a kind of transposition. E.g. gurum, I seize, but ghīt, seized, from * grifta-, * gift, * giht; pechem, I cook, but phök, cooked, from * pakhva-, * pahk.

The First Sentences of the Parable in Parachi of Shutul.

âdam dī push dērö-bön. Push-e -chinö bâw-kun-ē jari, Son-which-younger said, 'O One man two sons had. father-to-his da.' Bâw bâw, havī mâl-a takhsim kan, ma-kan hisab mâl-efather, this property-thy division make, me-to sharegive.' The-father protakhsim kur, zaghân-e-khukã-kun-ē dâ. Châ rūch <u>khukâ</u> perty-which-his-own division made, boys-which-his-own-to-he gave. Some days afterchhan push-e-chinö-ē mâlân-ē jam kor, mulk-e-derin tar rawân collected made, country-which-far to starting wards son-which-younger-his goods-his chhi. went.

Dr. Morgenstierne tells me that, before n and m the sound of \hat{a} is 'darker' than in other positions. Thus, the two \hat{a} s in $m\hat{a}\underline{k}\underline{h}\hat{a}n$, ours, are not quite the same. He has also provided the following lists of words in these two languages.

APPENDIX I.

CLASSIFIED LIST OF INDIAN LANGUAGES AS SHOWN IN THE LINGUISTIC SURVEY OF INDIA

AND IN THE

CENSUS OF 1921.

The following pages show the statistical results of the Linguistic Survey of India, compared, so far as is possible, with the language-figures of the Census of 1921.

A few words must be added as to the classification of the languages mentioned in this list. For those which have been dealt with in the Linguistic Survey, I have followed the grouping there adopted. The only exception is Mikir (No. 189), which later information has caused me to transfer from the Nāgā-Bodo to the Nāgā-Kuki sub-group. As regards the other languages,—nearly all of which are spoken in Burma,—I have thought it best, for convenience of reference, to follow the classification of the Census of 1921. A Linguistic Survey of Burma is at the present moment in progress, and it seems to me to be advisable to defer any alteration of the Census arrangement until that Survey has put the attempt upon a secure foundation. Any immediate change could only be temporary and provisional.

APPENDIX III.

INDEX OF LANGUAGE-NAMES.

NOTE

The following Index contains all the language-names occurring in the pages of the Linguistic Survey, with references to the place or places where each is mentioned. For the sake of completeness I have added all other names of Indian languages that I have collected from many different sources and more especially from the Census Reports of 1891, 1901, 1911 and 1921. I must specially acknowledge my indebtedness to the excellent Glossary of Obscure Language-names, given by Mr. Sedgwick as Appendix B. of the 1921 Bombay Census Report. With its aid, supplemented by further information kindly supplied by him, I have been able to clear up many points that had hitherto been doubtful.

A Linguistic Survey of Burma has been begun, and a valuable preliminary list of the languages spoken in that Province has already been issued. With the permission of the Government of Burma, I have incorporated in the present Index the names of many languages mentioned in that list. As these names were not recorded in the Linguistic Survey of India,—which did not extend to Burma,—their inclusion will greatly enhance the completeness of this Index.

The only contraction in this Index that needs explanation is the letter L. which appears frequently in the 7th column. This means the Standard List of Words and Sentences which is appended to each group of languages throughout the Survey.

		1	NUMBER OF	SPEAKERS.			WITH IN THE C SURVEY.		
Language o	r Di	alect.	Number in Classified List.	According to the Lirguistic Survey.	According to the Census of 1921.	Volume.	Part.	Page.	Remarks.

Kachehhī	451	491,214		VIII	i	9, 10, 183, 215 (L.).	A dialect of Sindhī (445) spoken in Cutch (Bombay).
Kachchhi, Standard .	452	484,714	•••	VIII	, i	183, 215 (L.).	
Kāchhē-jī Bōlī	369	5,000		X		331, 413ff., 435 (L.).	A form of Balcchi (361) spoken in the Kāchhō, or the country in the west of Karachi District (Sind).
Kāehhrī	423	17,972	 !	vIII	i	239, 280, 294	A form of the Standard dialect (416) of Lahndā (415) spoken in the Kāchhī, or alluvial country, between the Jehlam river and the Jhang Thal (Panjab).
Kachin	203	1,920	151,196	111 111	ii iii	510, 516 10 (Comparative Vocabulary).	A language of the Assam-Burmese Branch of the Tibeto-Burman languages. The few speakers recorded in the Survey belong to the Lakhimpur and Sibsagar Districts of Assam. Nearly all the speakers of the language belong to Burma, which was not subject to the operations of this Survey. According to the Burma Linguistic Survey, Kachin is spoken in that Province by 142,785 people in the Northern Hill Districts, and in the Northern Shan States. Compare Singpho for further references.
Kachin-Burma Hybrids				III	111	381	These, according to the Census of 1911, are Szi Lepai (261), Lashi (262), Maru (263), and Maingtha (260). They are all spoken in Burma, and are not dealt with in this Survey Pending the completion of the Burma Linguistic Survey, I provisionally class them under the Burma Group as has been done in the Census of 1921. They have been suggested, with considerable probability, to be remnants left by the Burmese on their migration from the North into Burma, or as the languages of tribes of the same origin as the Burmese who left Tibet soon after them. Phon or Phun (272a) also apparently belongs to this group. All these are dealt with in the Burma Linguistic Survey. For particulars, see each language. According to the Burma Linguistic Survey, the number of speakers differs greatly from that given in the Census, being Szi Lepai, 11,838; Maingtha, 2.781; Lashi, 23,368; Maru, 35,531; and Phón, 650; total 74,168.
Kachin Group		1,920	151,196	III	i ii	2, 11	A Group of the Assam-Burmese Branch of the Tibeto-Burman languages. The Burma Linguistic Survey gives a total of 225,330 speakers in Burma for this Group.
Kachnakhrā	***			IV	•••		Another name for Kuru <u>kh</u> (305).
Ka-dhak	•••	•••	•••		···• !		A dialect of Yindu (253) reported in the Barma Linguistic Survey as spoken by 282 people in Pakôkku.
Kedi	•••	•••	····		'	***	A Gipsy language reported in the 1891 Hyderabad Census Report. Not included in this Survey, which did not extend to that State.
